Unit-2 Mastery Assessment (version 608)

Question 1 (10 points)

Let f represent a function. If $f[13] = 33$, then there exists a knowable solution to the equation below.

$$y = \frac{f\left[\frac{x+22}{4}\right] - 17}{2}$$

Find the solution.

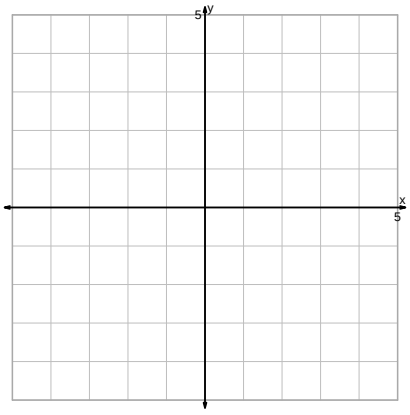
$x =$

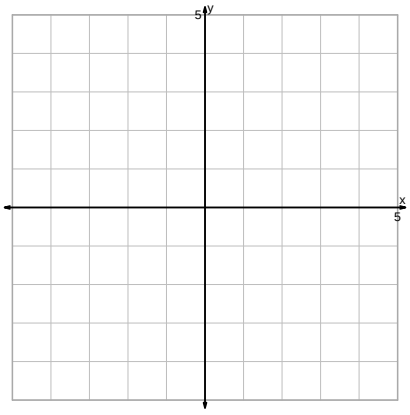
$y =$

Question 2 (20 points)

Graph the equations accurately. For each integer-integer point on the parent, indicate the corresponding point precisely. Also, with dashed lines, indicate any asymptotes.

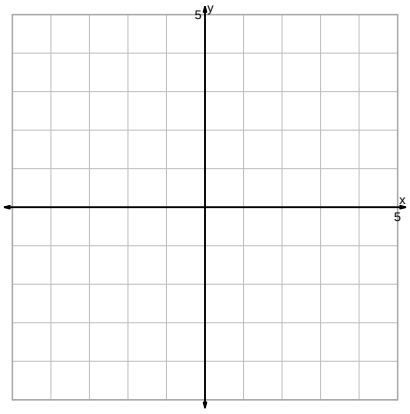
$y = 2^{2x}$

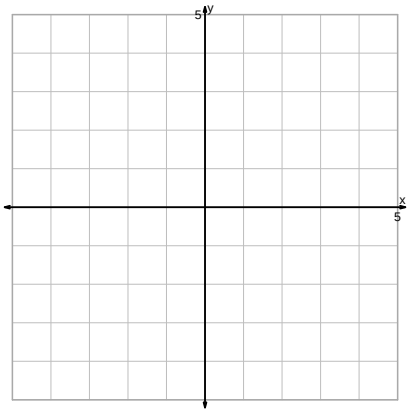




$y = \log_2(-x)$

$y = \sqrt[3]{x} - 2$

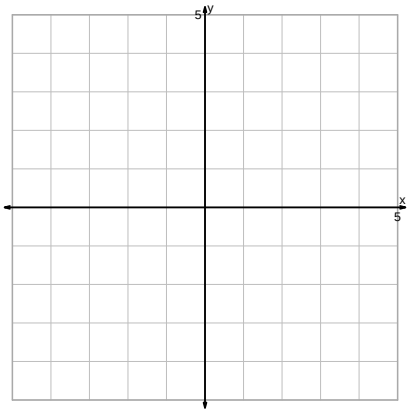


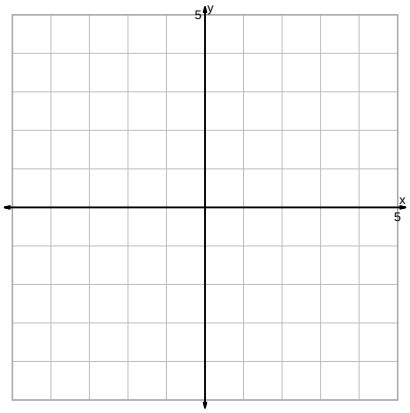


$y = (x+2)^2$

Question 2 continued...

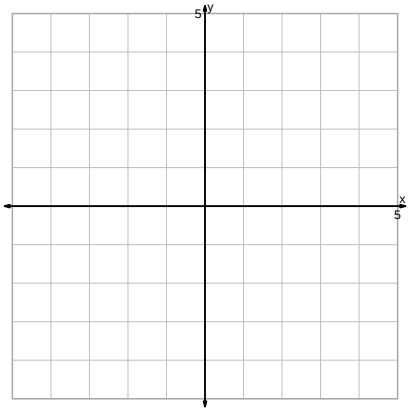
$y = 2 \cdot \log_2(x)$

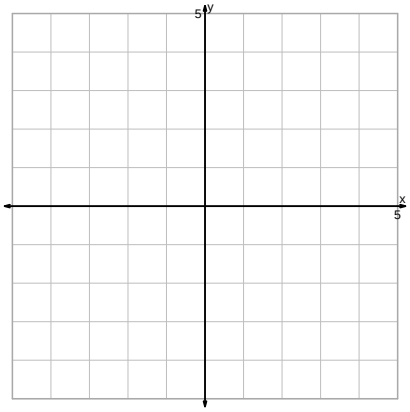




$y = \frac{\sqrt{x}}{2}$

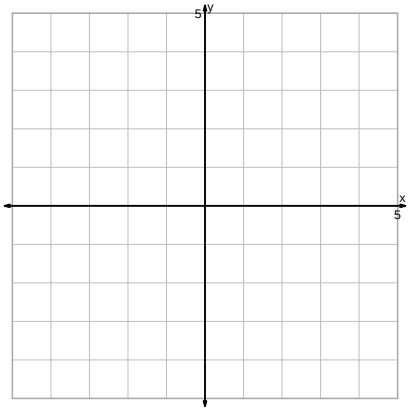
$y = -2^x$

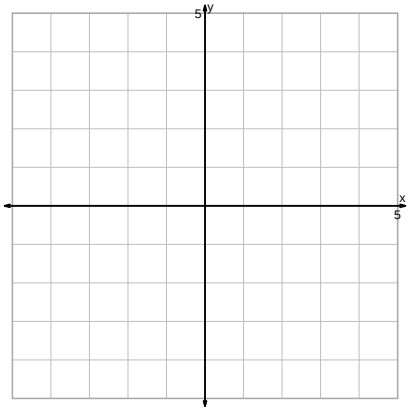




$y = \left(\frac{x}{2}\right)^3$

$y = (x-2)^3$

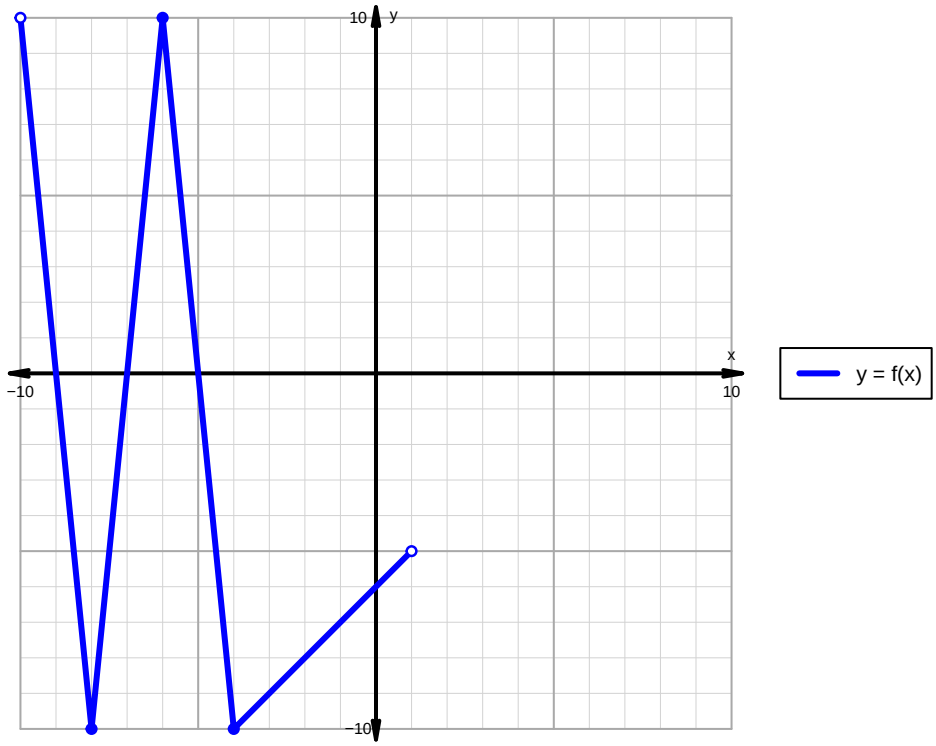




$y = x^2 + 2$

Question 3 (20 points)

A function is graphed below.



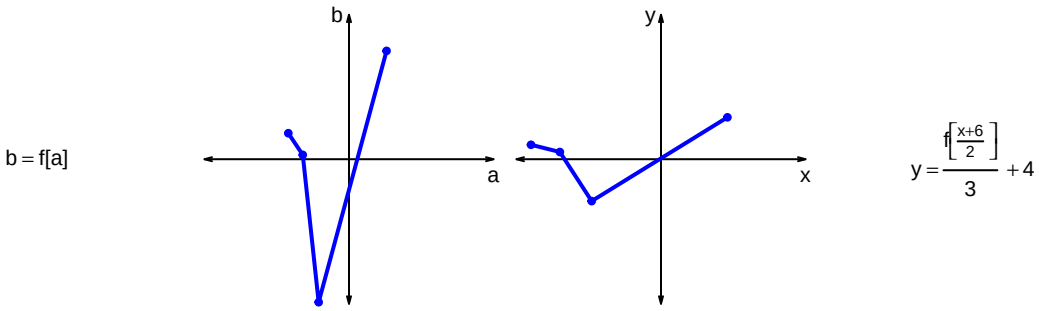
Indicate the following intervals using interval notation.

Feature	Where
Positive	
Negative	
Increasing	
Decreasing	
Domain	
Range	

Question 4 (20 points)

Let f represent a function. The curves $b = f[a]$ and $y = \frac{f\left[\frac{x+6}{2}\right]}{3} + 4$ are represented below in a table and on graphs.

a	b	x	y
-42	18	-90	10
-32	3	-70	5
-21	-99	-48	-29
26	75	46	29



a. Write formulas for calculating x from a and calculating y from b. (Or, write the coordinate transformation formula.)

b. What geometric transformations (using words like translation, stretch, and shrink), and in what order, would transform the first curve $y = f[x]$ into the second curve $y = \frac{f\left[\frac{x+6}{2}\right]}{3} + 4$?

Question 5 (10 points)

A parent square-root function is transformed in the following ways:

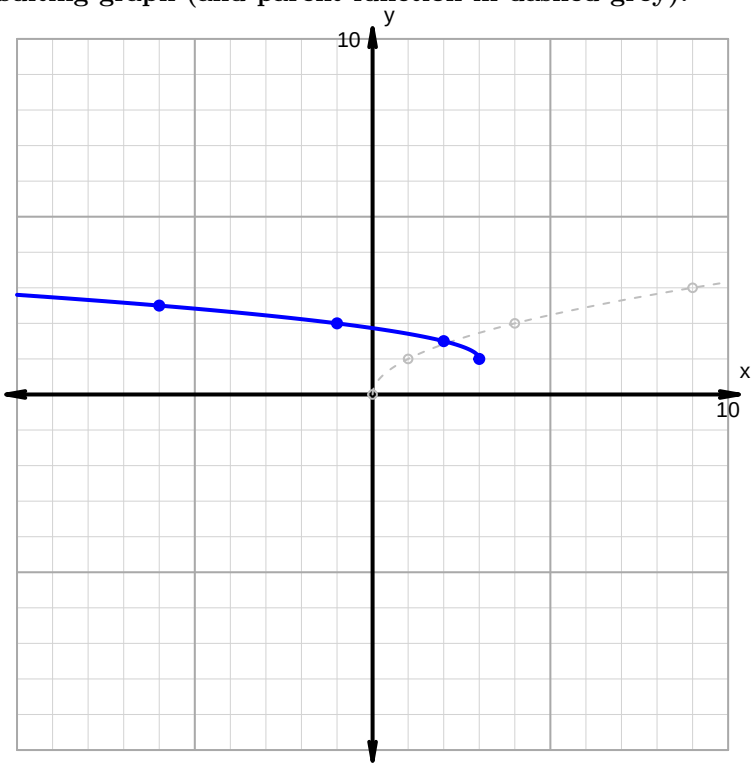
Horizontal transformations

1. Translate left by distance 3.
2. Horizontal reflection over y axis.

Vertical transformations

1. Vertical shrink by factor 2.
2. Translate up by distance 1.

Resulting graph (and parent function in dashed grey):

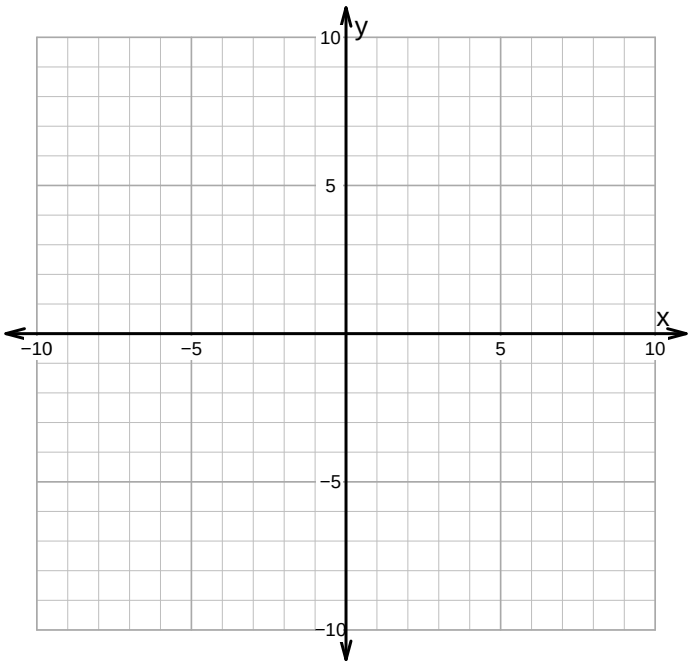


- What is the equation for the curve shown above?

Question 6 (20 points)

Make an accurate graph, and describe locations of features.

$$y = \frac{1}{3} \cdot |x - 2| - 1$$



Feature	Where
Domain	
Range	
Positive	
Negative	
Increasing	
Decreasing
