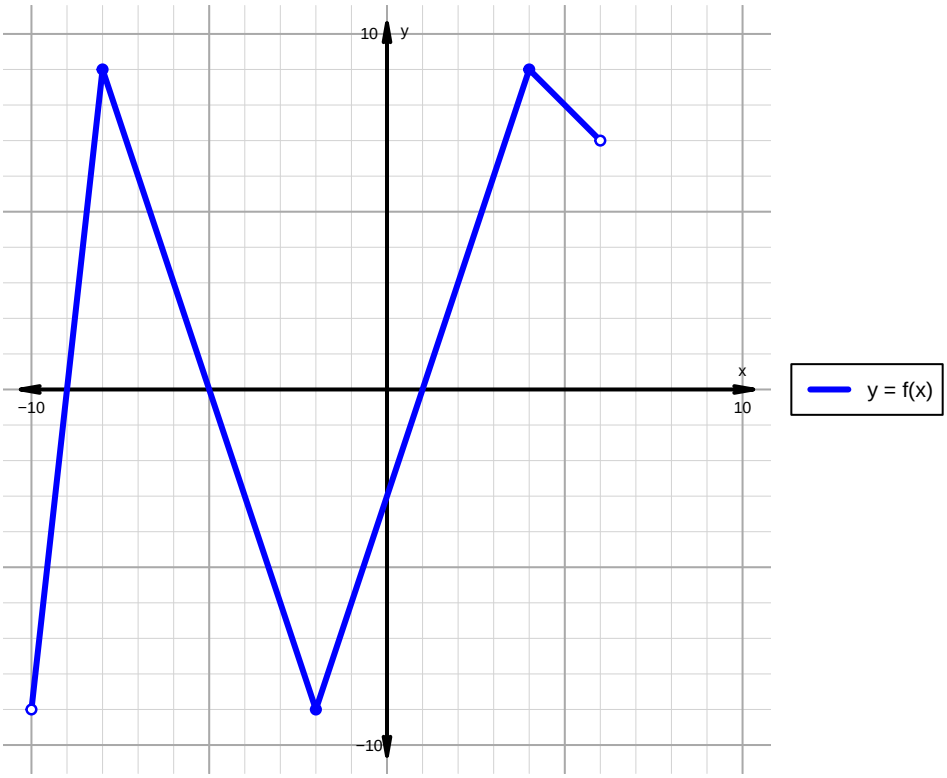
Intervals, Transformations, and Slope Solution (version 138)

1. The function f is graphed below.

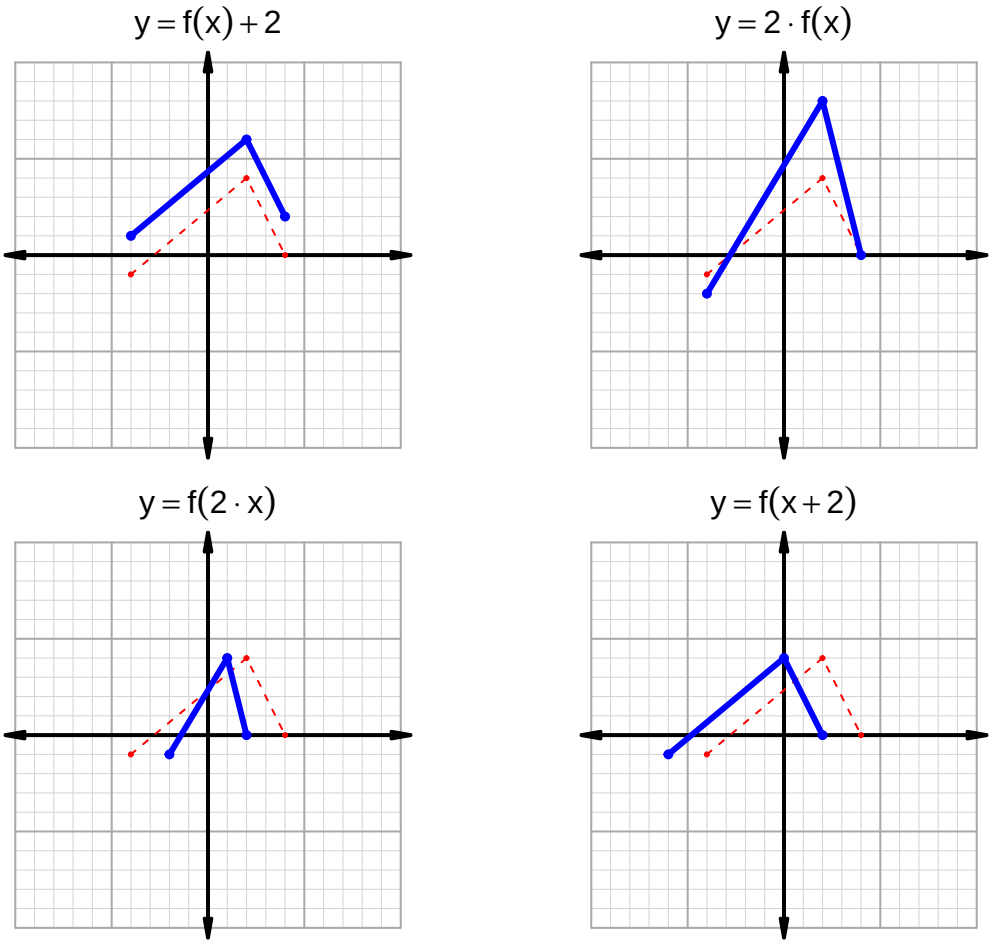


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(-9,-5)\cup(1,6)$
Negative	$(-10,-9)\cup(-5,1)$
Increasing	$(-10,-8)\cup(-2,4)$
Decreasing	$(-8,-2)\cup(4,6)$
Domain	$(-10,6)$
Range	$(-9,9)$

Intervals, Transformations, and Slope Solution (version 138)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 40$ and $x_2 = 96$. Express your answer as a reduced fraction.

x	$g(x)$
29	40
40	77
77	96
96	29

$\frac{f(96)-f(40)}{96-40} = \frac{29-77}{96-40} = \frac{-48}{56}$

The greatest common factor of -48 and 56 is 8. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{-6}{7}$$
