p1020: graded take-home open-note practice exam (version 207)

Question 1

Let f represent a function. If $f[7] = 3$, then there exists a knowable solution to the equation below.

$$y = 19 \cdot f\left[\frac{x - 18}{4}\right] - 29$$

Find the solution.

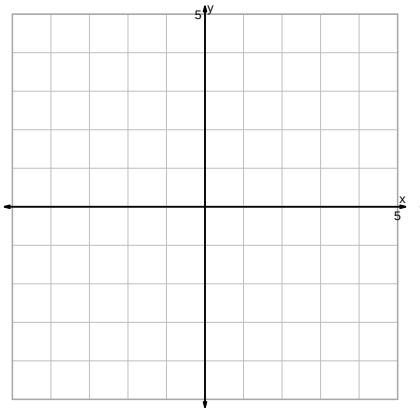
$x =$

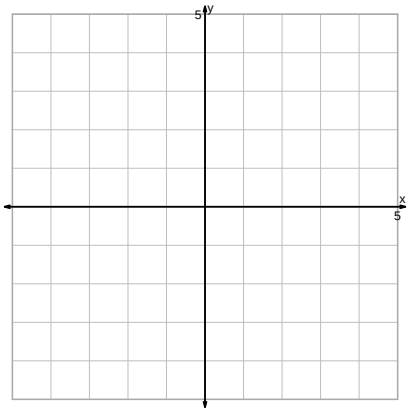
$y =$

Question 2

Graph the equations accurately. For each integer-integer point on the parent, indicate the corresponding point precisely. Also, with dashed lines, indicate any asymptotes.

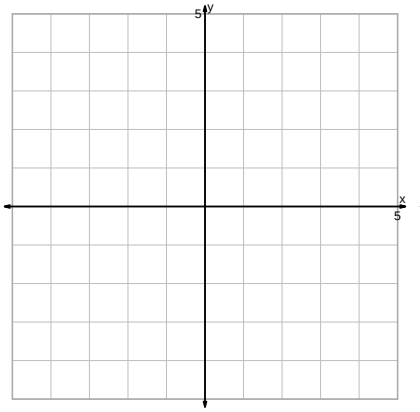
$y = 2^x - 2$

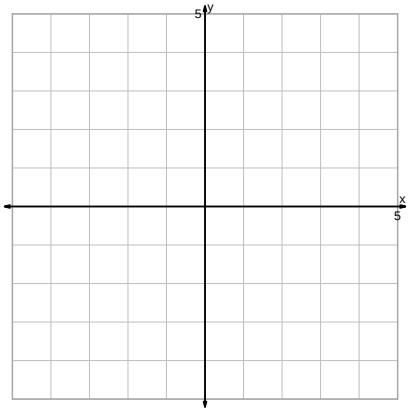




$y = (x + 2)^3$

$y = 2 \cdot \log_2(x)$

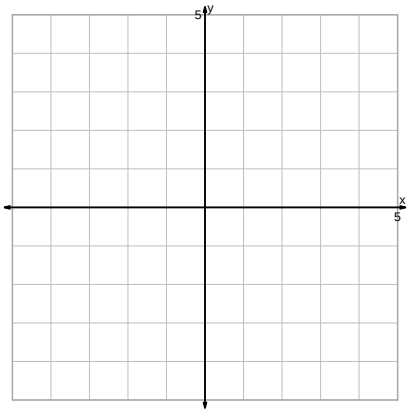


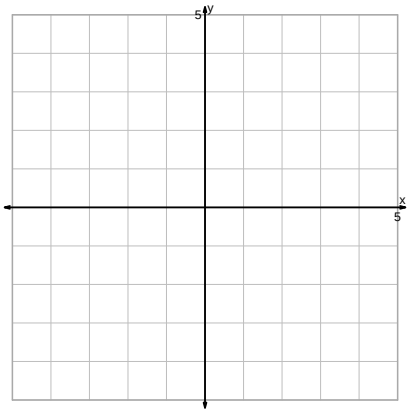


$y = 2^{-x}$

Question 2 continued...

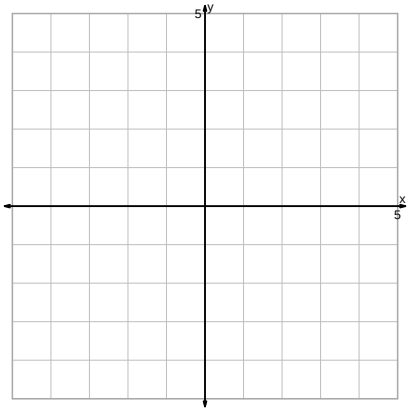
$y = -\sqrt{x}$

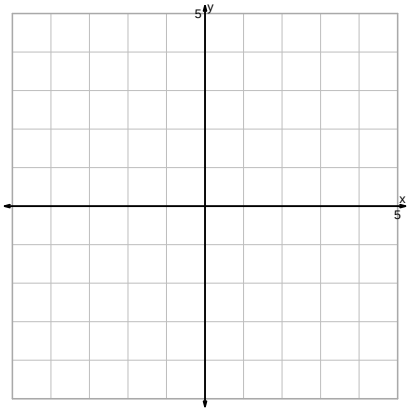




$y = \frac{\sqrt[3]{x}}{2}$

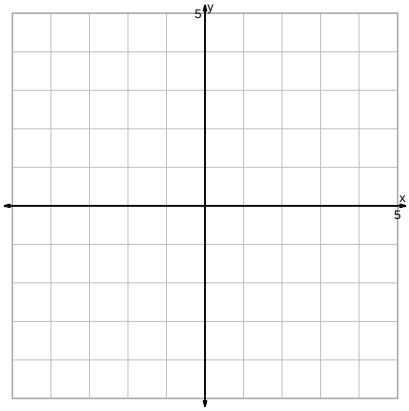
$y = \sqrt[3]{x} + 2$

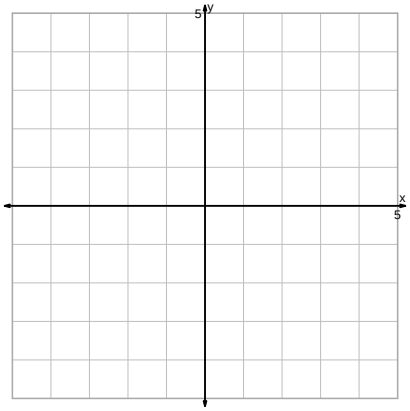




$y = \left(x - 2\right)^3$

$y = \sqrt{\frac{x}{2}}$

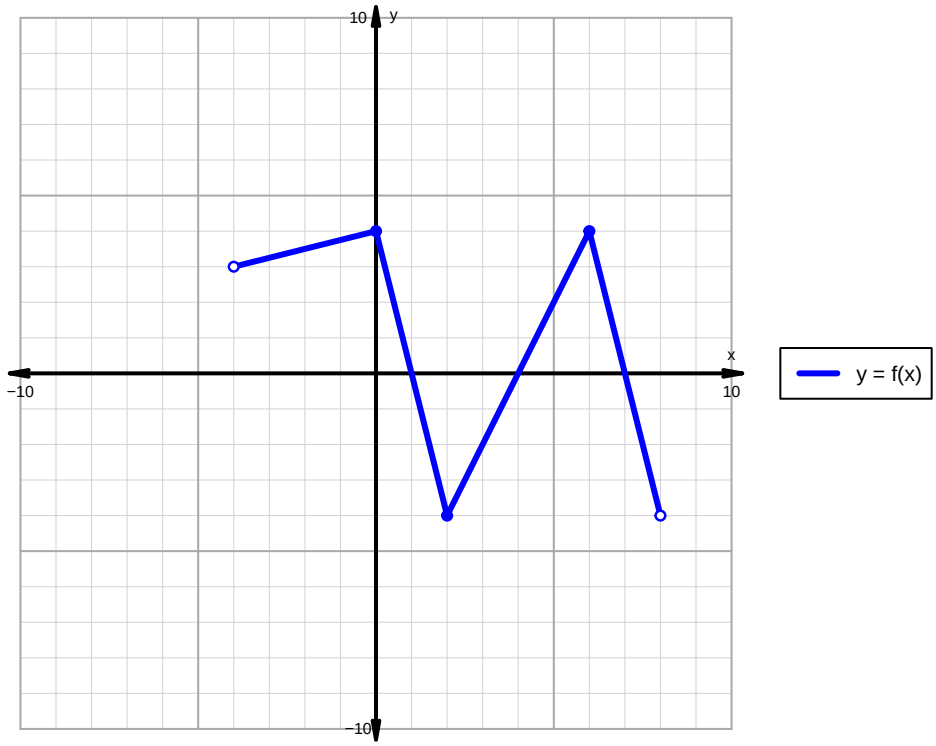




$y = \left(2x\right)^2$

Question 3

A function is graphed below.



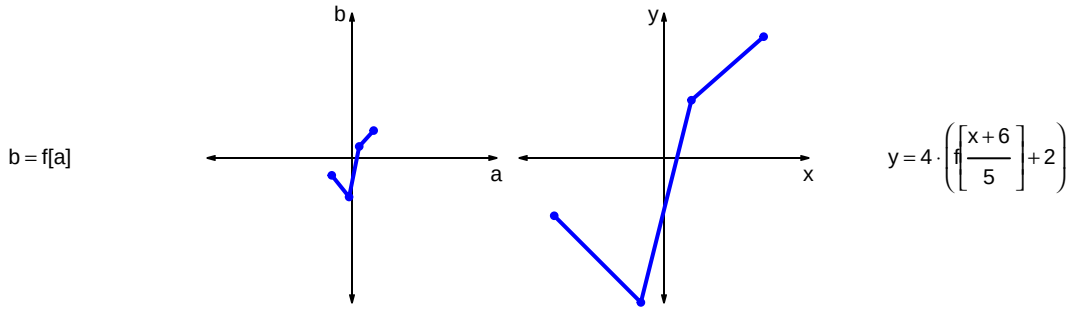
Indicate the following intervals using interval notation.

Feature	Where
Positive	
Negative	
Increasing	
Decreasing	
Domain	
Range	

Question 4

Let f represent a function. The curves $b = f[a]$ and $y = 4 \cdot \left(f\left[\frac{x+6}{5}\right] + 2\right)$ are represented below in a table and on graphs.

a	b	x	y
-14	-12	-76	-40
-2	-27	-16	-100
5	8	19	40
15	19	69	84



a. Write formulas for calculating x from a and calculating y from b. (Or, write the coordinate transformation formula.)

b. What geometric transformations (using words like translation, stretch, and shrink), and in what order, would transform the first curve $y = f[x]$ into the second curve $y = 4 \cdot \left(f\left[\frac{x+6}{5}\right] + 2\right)$?

Question 5

A parent square-root function is transformed in the following ways:

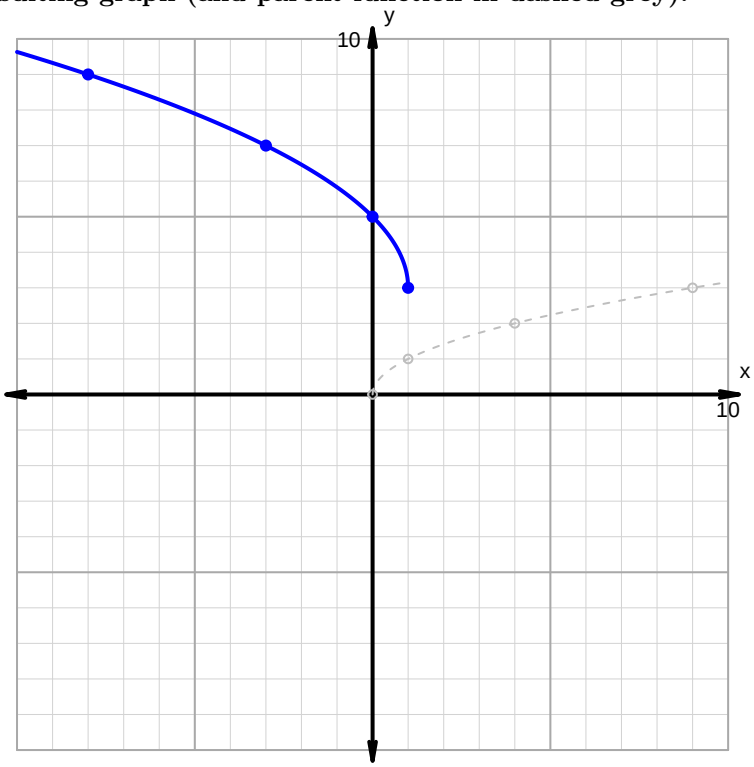
Horizontal transformations

1. Horizontal reflection over y axis.
2. Translate right by distance 1.

Vertical transformations

1. Vertical stretch by factor 2.
2. Translate up by distance 3.

Resulting graph (and parent function in dashed grey):

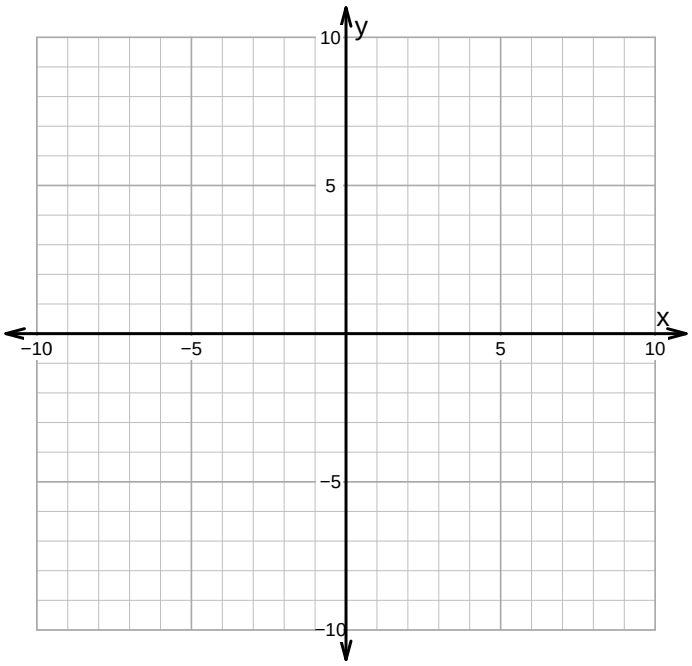


- What is the equation for the curve shown above?

Question 6

Make an accurate graph, and describe locations of features.

$$y \;=\; -2 \cdot |x + 6| + 6$$



Feature	Where
Domain	
Range	
Positive	
Negative	
Increasing	
Decreasing
