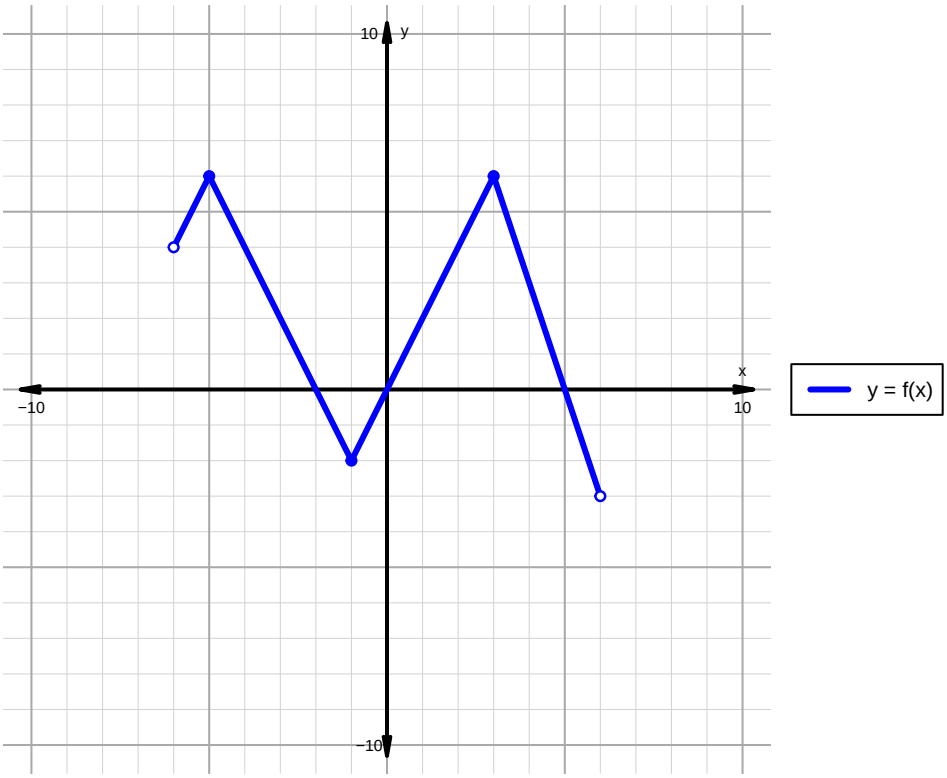
Intervals, Transformations, and Slope Solution (version 51)

1. The function f is graphed below.

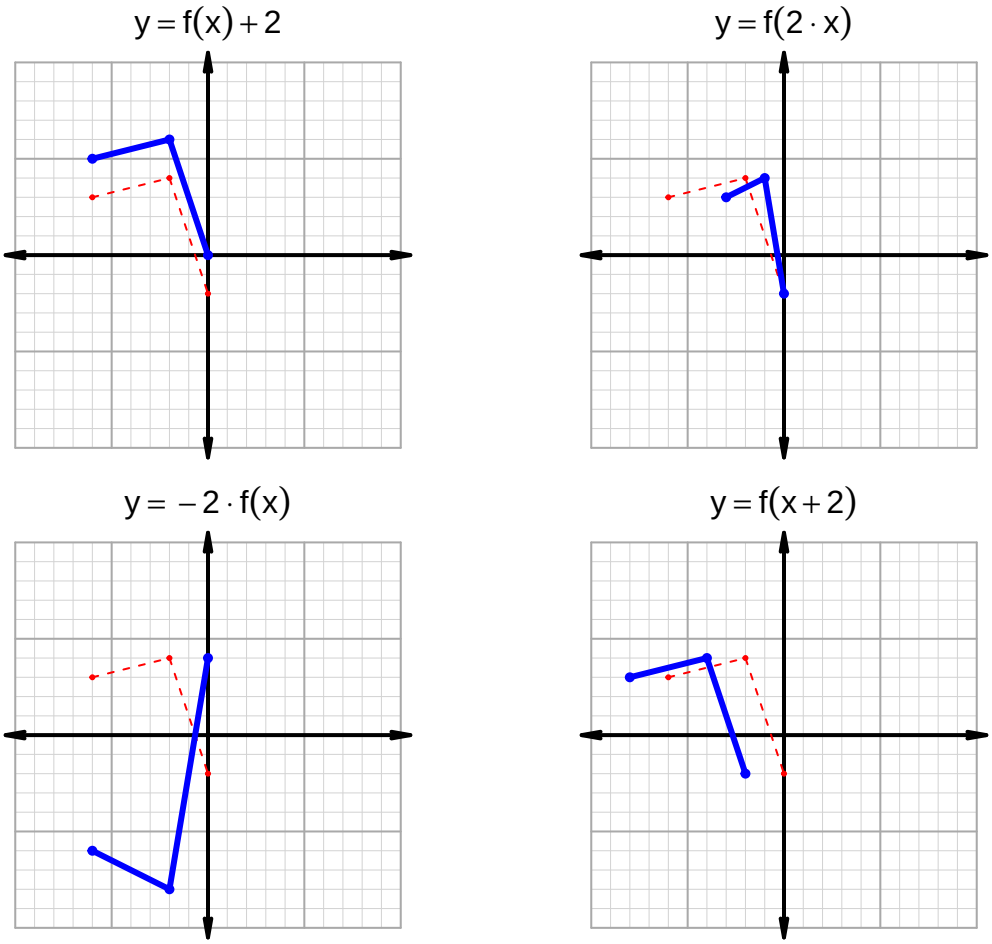


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(-6,-2)\cup(0,5)$
Negative	$(-2,0)\cup(5,6)$
Increasing	$(-6,-5)\cup(-1,3)$
Decreasing	$(-5,-1)\cup(3,6)$
Domain	$(-6,6)$
Range	$(-3,6)$

Intervals, Transformations, and Slope Solution (version 51)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 36$ and $x_2 = 64$. Express your answer as a reduced fraction.

x	$g(x)$
36	75
64	79
75	64
79	36

$\frac{g(64)-g(36)}{64-36} = \frac{79-75}{64-36} = \frac{4}{28}$

The greatest common factor of 4 and 28 is 4. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{1}{7}$$
