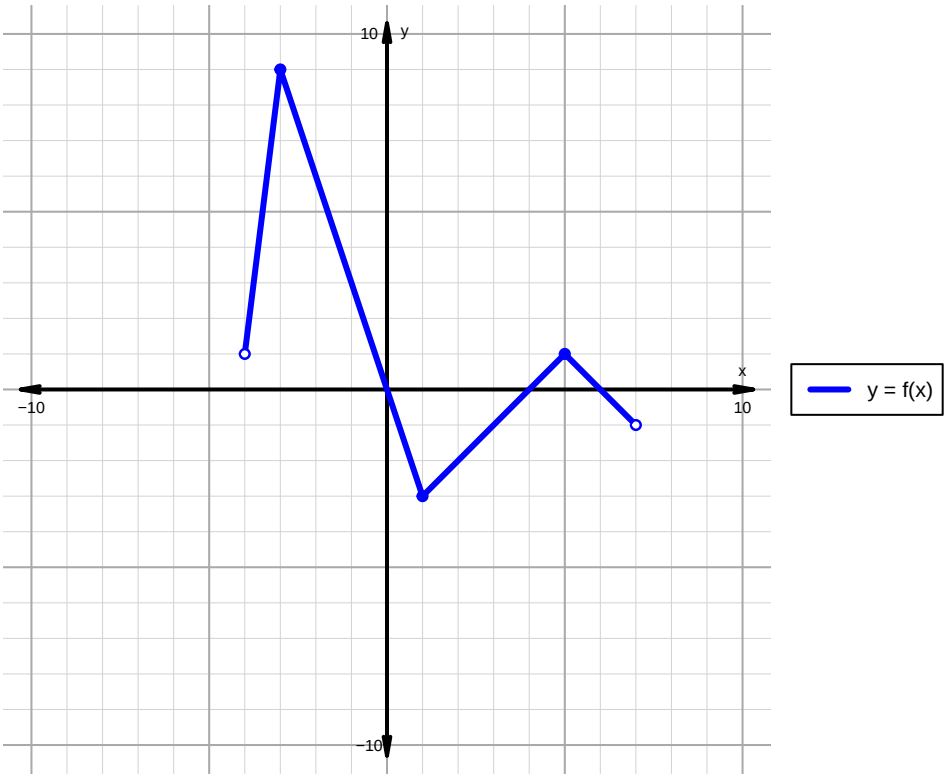
Intervals, Transformations, and Slope Solution (version 11)

1. The function f is graphed below.

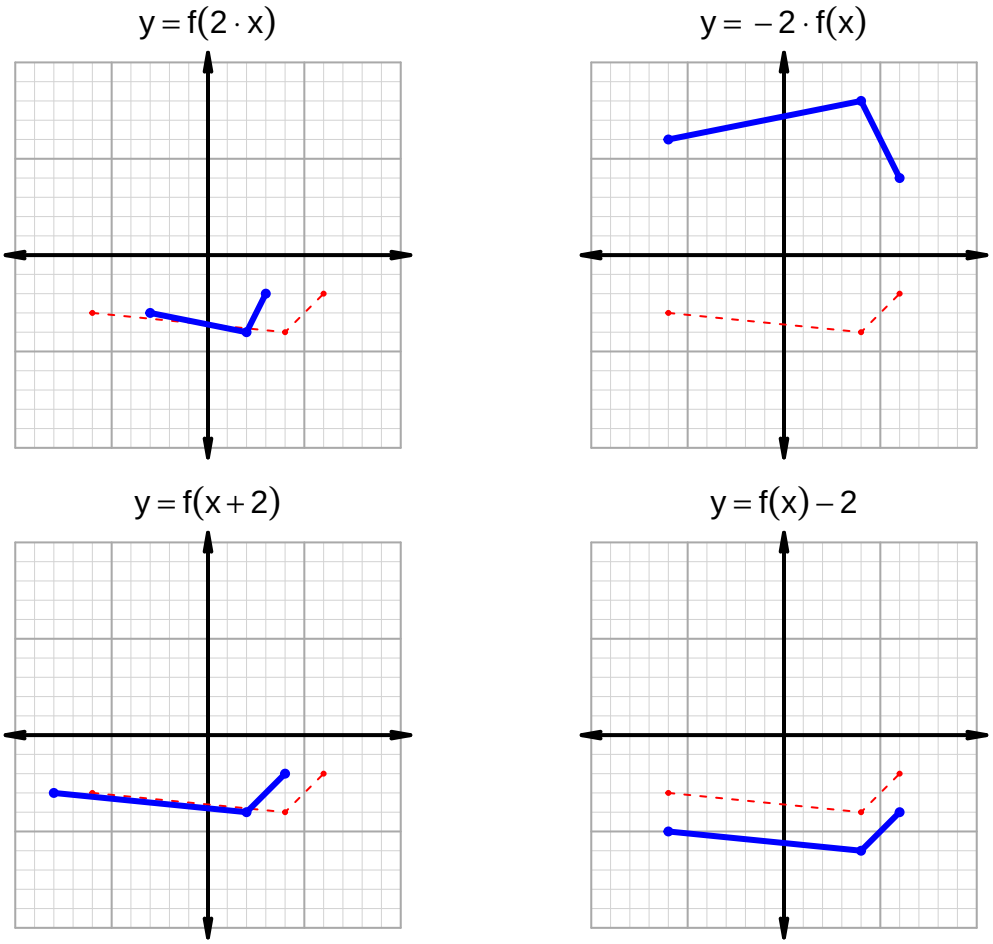


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(-4, 0) \cup (4, 6)$
Negative	$(0, 4) \cup (6, 7)$
Increasing	$(-4, -3) \cup (1, 5)$
Decreasing	$(-3, 1) \cup (5, 7)$
Domain	$(-4, 7)$
Range	$(-3, 9)$

Intervals, Transformations, and Slope Solution (version 11)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. Please add the indicated transformed graphs indicated by the equations below using a solid line.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 39$ and $x_2 = 79$. Express your answer as a reduced fraction.

x	$g(x)$
4	39
29	79
39	29
79	4

$\frac{f(79)-f(39)}{79-39} = \frac{4-29}{79-39} = \frac{-25}{40}$

The greatest common factor of -25 and 40 is 5. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{-5}{8}$$
