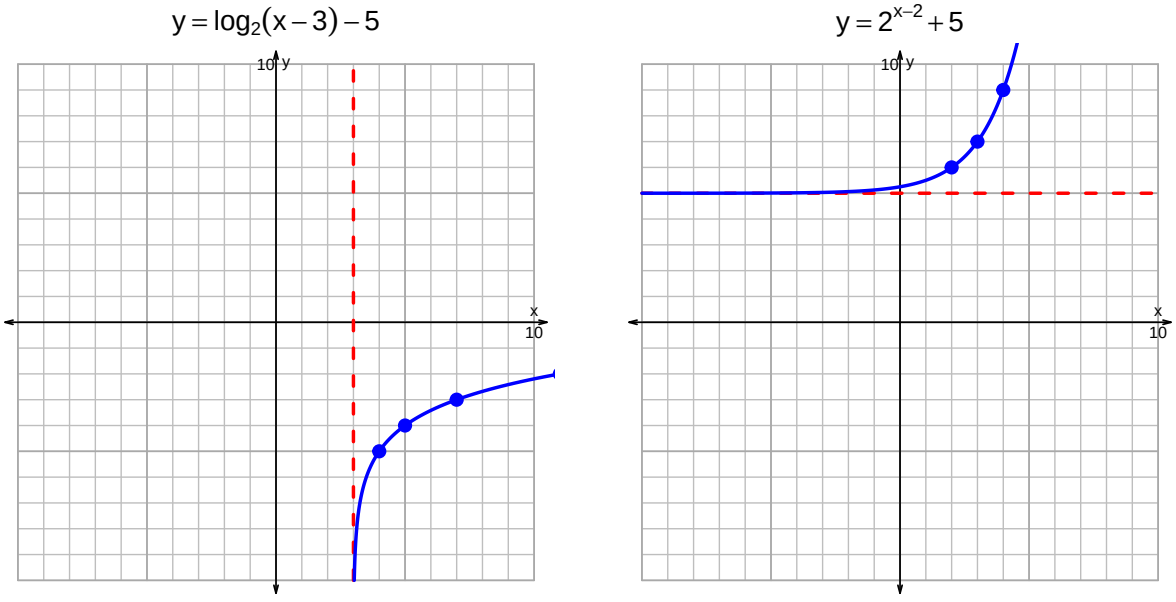
s18: EXP LOG (SLTN v335)

1. (10 pts) Graph $y = \log_2(x-3) - 5$ and $y = 2^{x-2} + 5$ on the grids below. Also, draw any asymptotes with dashed lines.



Somewhat useful hint: $2^3 = 8$, *and thus* $\log_2(8) = 3$.

2. (10 pts) Write (but do not evaluate) the solution to the equation below by writing a logarithmic expression. Please do not do any arithmetic; just move numbers around.

$$-17 = \left(\frac{-3}{7}\right) \cdot 10^{5t/4}$$

Divide both sides by $\frac{-3}{7}$.

$$\frac{17 \cdot 7}{3} = 10^{5t/4}$$

Take log, base 10, of both sides.

$$\log_{10}\left(\frac{17 \cdot 7}{3}\right) = \frac{5t}{4}$$

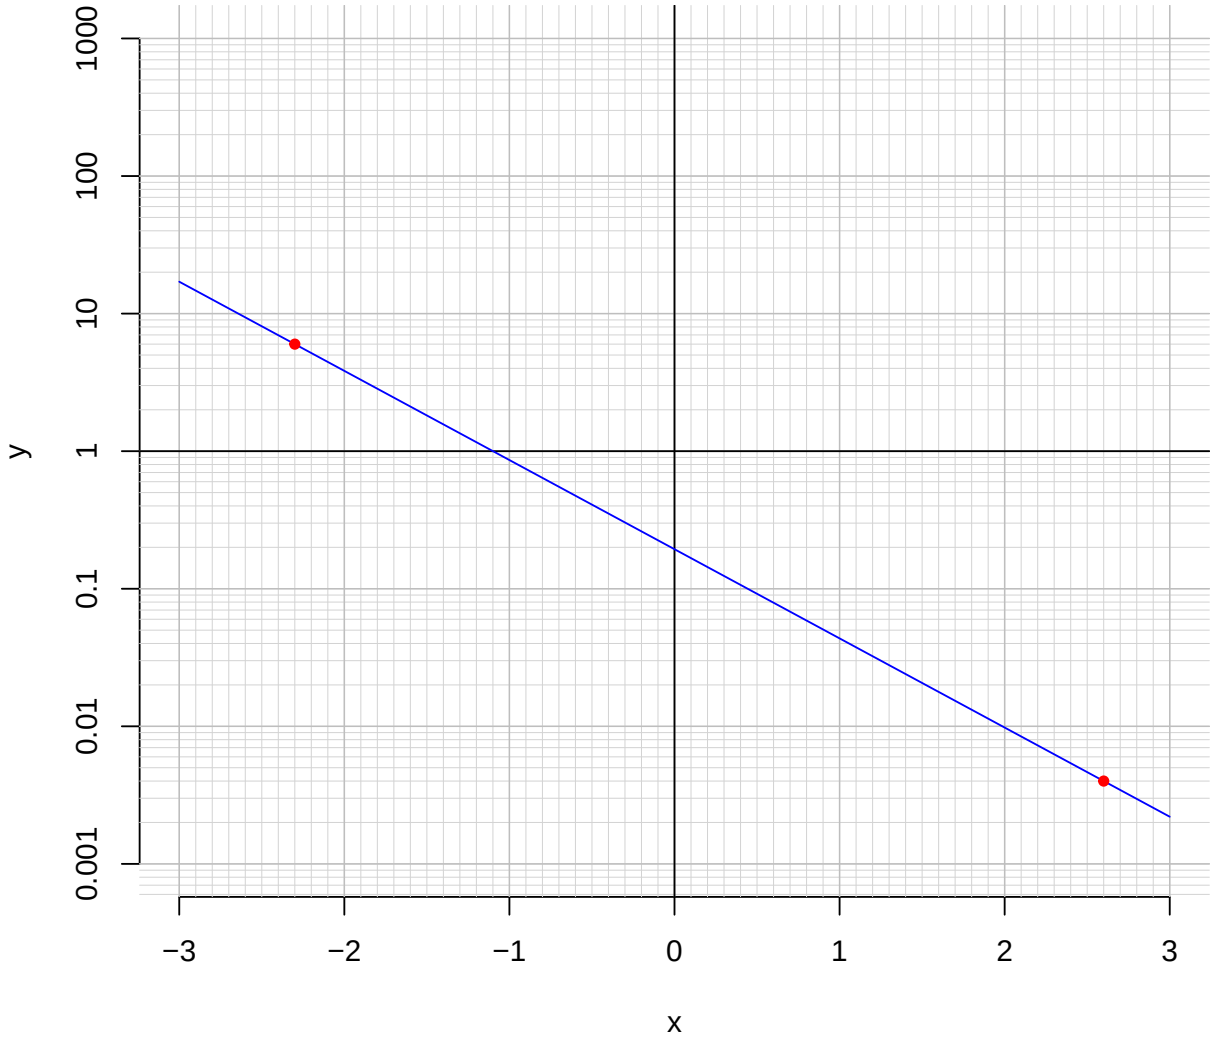
Divide both sides by $\frac{5}{4}$.

$$\frac{4}{5} \cdot \log_{10}\left(\frac{17 \cdot 7}{3}\right) = t$$

Switch sides.

$$t = \frac{4}{5} \cdot \log_{10}\left(\frac{17 \cdot 7}{3}\right)$$

3. (10 pts) An exponential function $f(x) = 0.194 \cdot e^{-1.49x}$ is graphed below on a semi-log plot.



a. Using the plot above, evaluate $f(2.6)$.

$$f(2.6) = 0.004$$

b. The inverse function is logarithmic.

$$f^{-1}(x) = \frac{-1}{1.49} \cdot \ln\left(\frac{x}{0.194}\right)$$

Using the plot above, evaluate $f^{-1}(6)$.

$$f^{-1}(6) = -2.3$$
