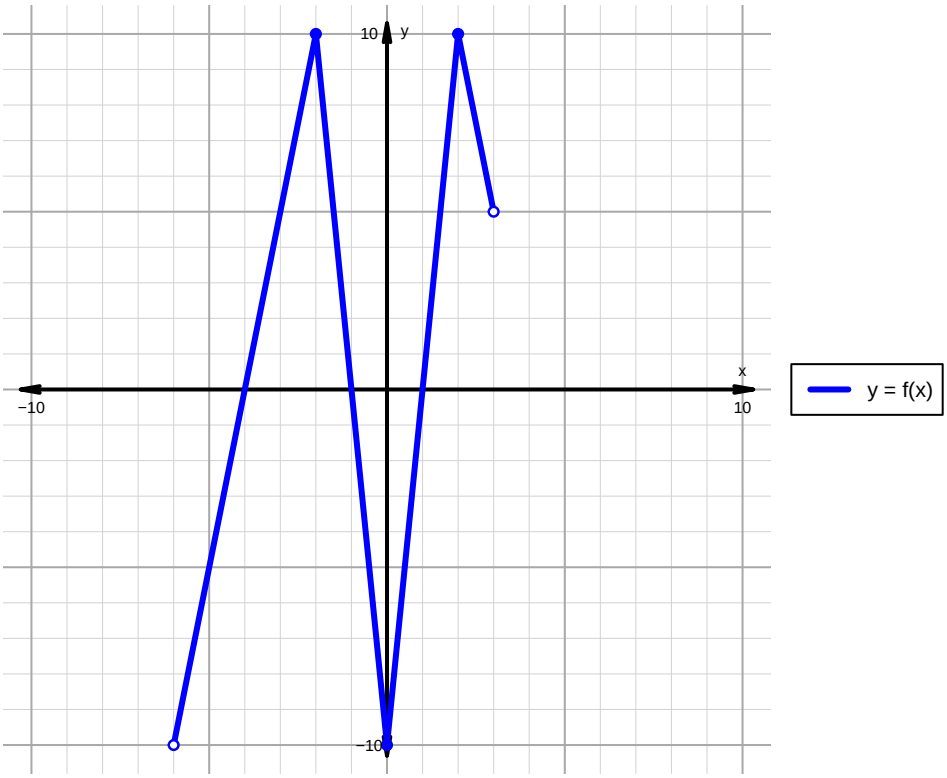
Intervals, Transformations, and Slope Solution (version 126)

1. The function f is graphed below.

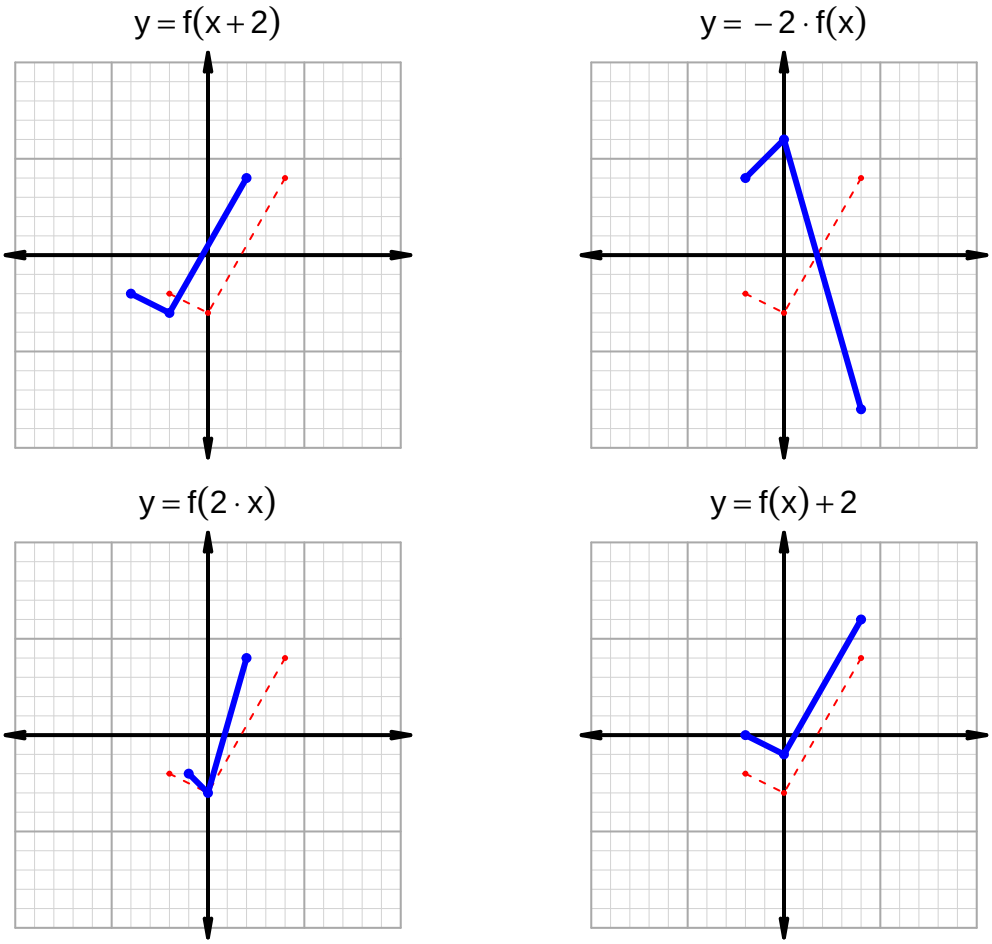


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(-4,-1)\cup(1,3)$
Negative	$(-6,-4)\cup(-1,1)$
Increasing	$(-6,-2)\cup(0,2)$
Decreasing	$(-2,0)\cup(2,3)$
Domain	$(-6,3)$
Range	$(-10,10)$

Intervals, Transformations, and Slope Solution (version 126)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 25$ and $x_2 = 50$. Express your answer as a reduced fraction.

x	$g(x)$
25	56
50	61
56	50
61	25

$\frac{f(50)-f(25)}{50-25} = \frac{61-56}{50-25} = \frac{5}{25}$

The greatest common factor of 5 and 25 is 5. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{1}{5}$$
