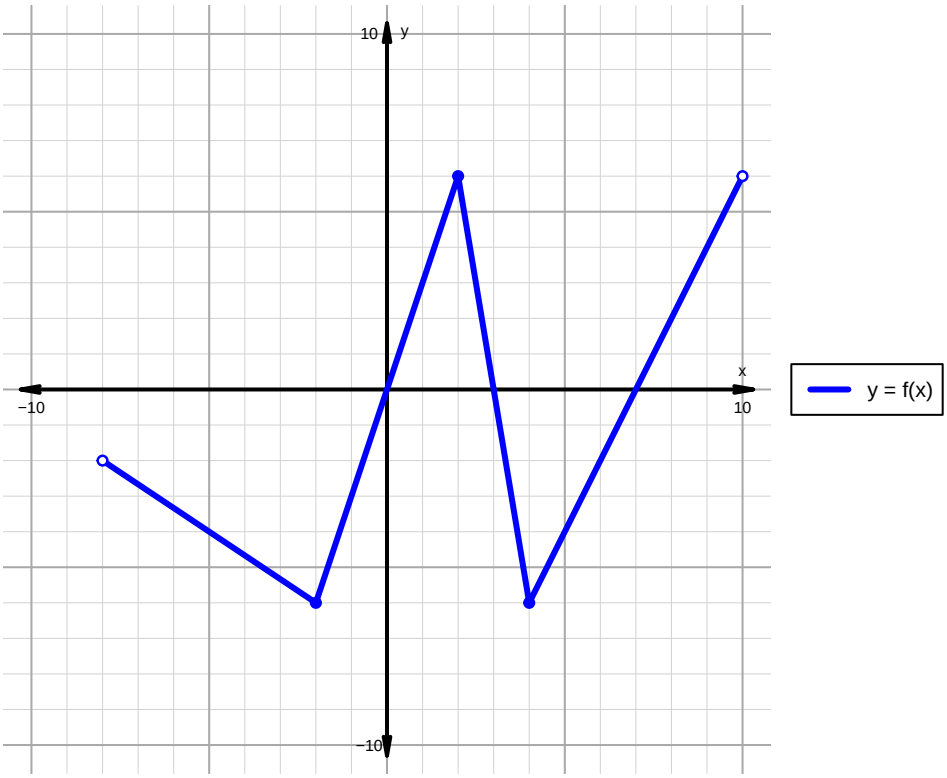
Intervals, Transformations, and Slope Solution (version 146)

1. The function f is graphed below.

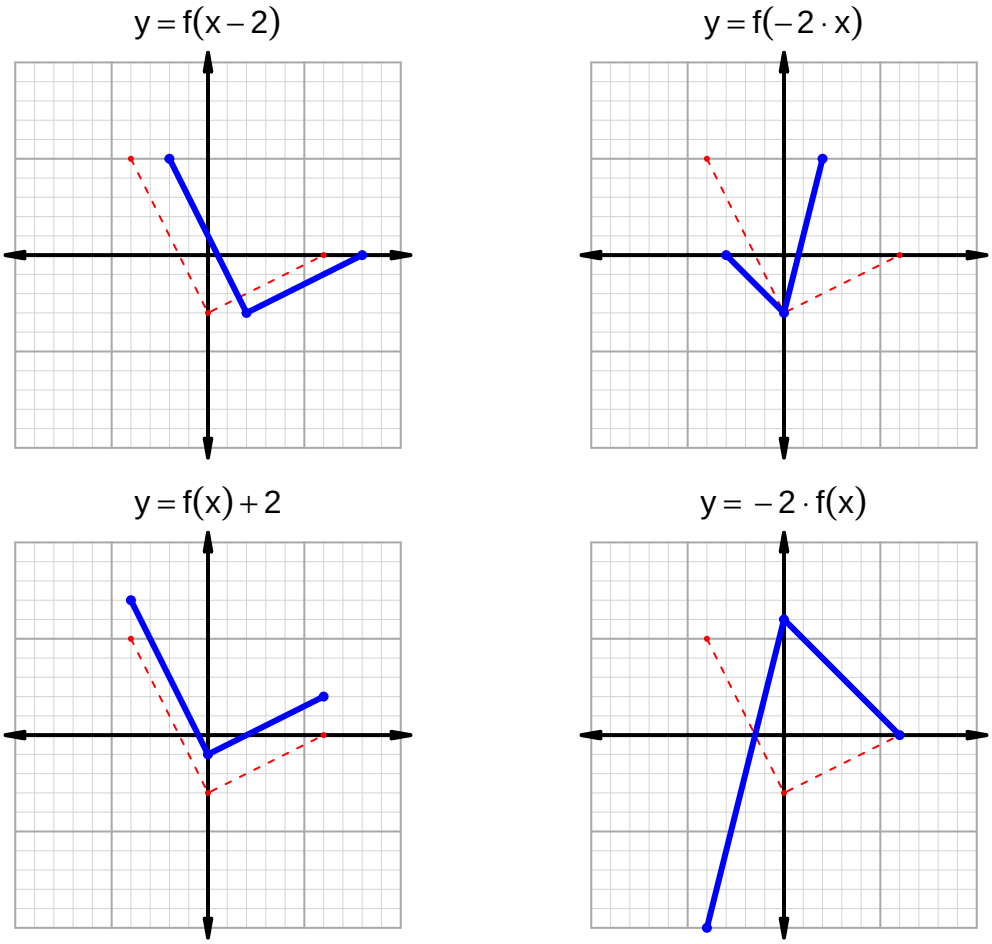


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(0, 3) \cup (7, 10)$
Negative	$(-8, 0) \cup (3, 7)$
Increasing	$(-2, 2) \cup (4, 10)$
Decreasing	$(-8, -2) \cup (2, 4)$
Domain	$(-8, 10)$
Range	$(-6, 6)$

Intervals, Transformations, and Slope Solution (version 146)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 35$ and $x_2 = 45$. Express your answer as a reduced fraction.

x	$g(x)$
35	73
45	55
55	35
73	45

$\frac{f(45)-f(35)}{45-35} = \frac{55-73}{45-35} = \frac{-18}{10}$

The greatest common factor of -18 and 10 is 2. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{-9}{5}$$
