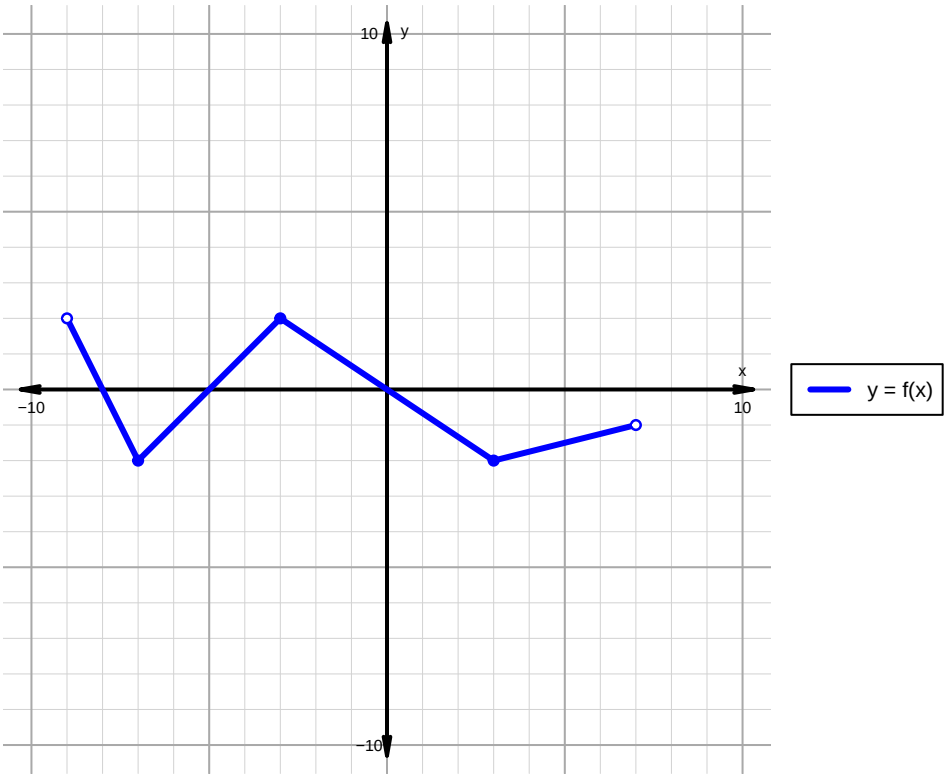
Intervals, Transformations, and Slope Solution (version 89)

1. The function f is graphed below.

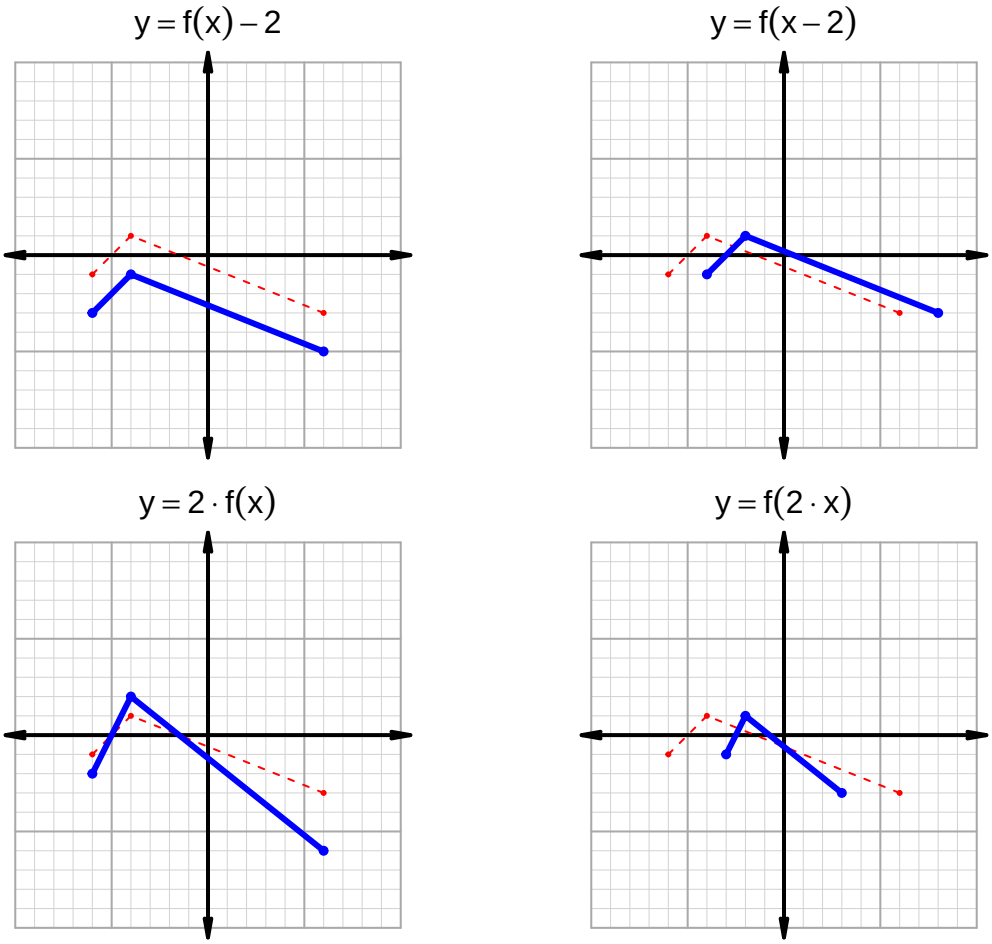


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(-9,-8)\cup(-5,0)$
Negative	$(-8,-5)\cup(0,7)$
Increasing	$(-7,-3)\cup(3,7)$
Decreasing	$(-9,-7)\cup(-3,3)$
Domain	$(-9,7)$
Range	$(-2,2)$

Intervals, Transformations, and Slope Solution (version 89)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 37$ and $x_2 = 79$. Express your answer as a reduced fraction.

x	$g(x)$
37	47
47	79
79	96
96	37

$\frac{g(79)-g(37)}{79-37} = \frac{96-47}{79-37} = \frac{49}{42}$

The greatest common factor of 49 and 42 is 7. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{7}{6}$$
