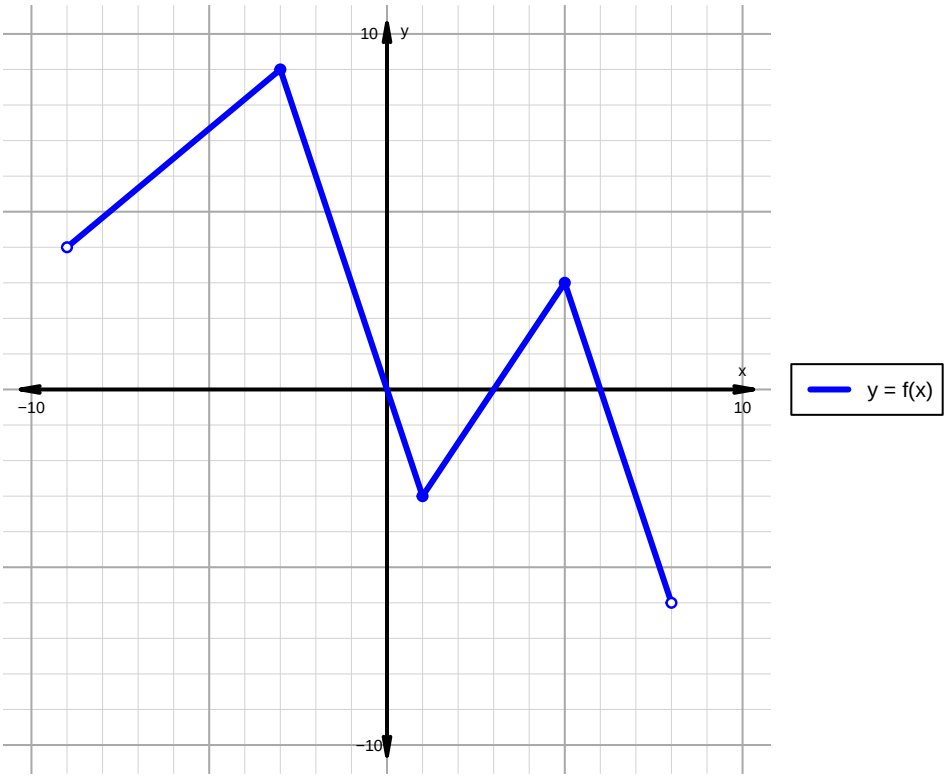
Intervals, Transformations, and Slope Solution (version 122)

1. The function f is graphed below.

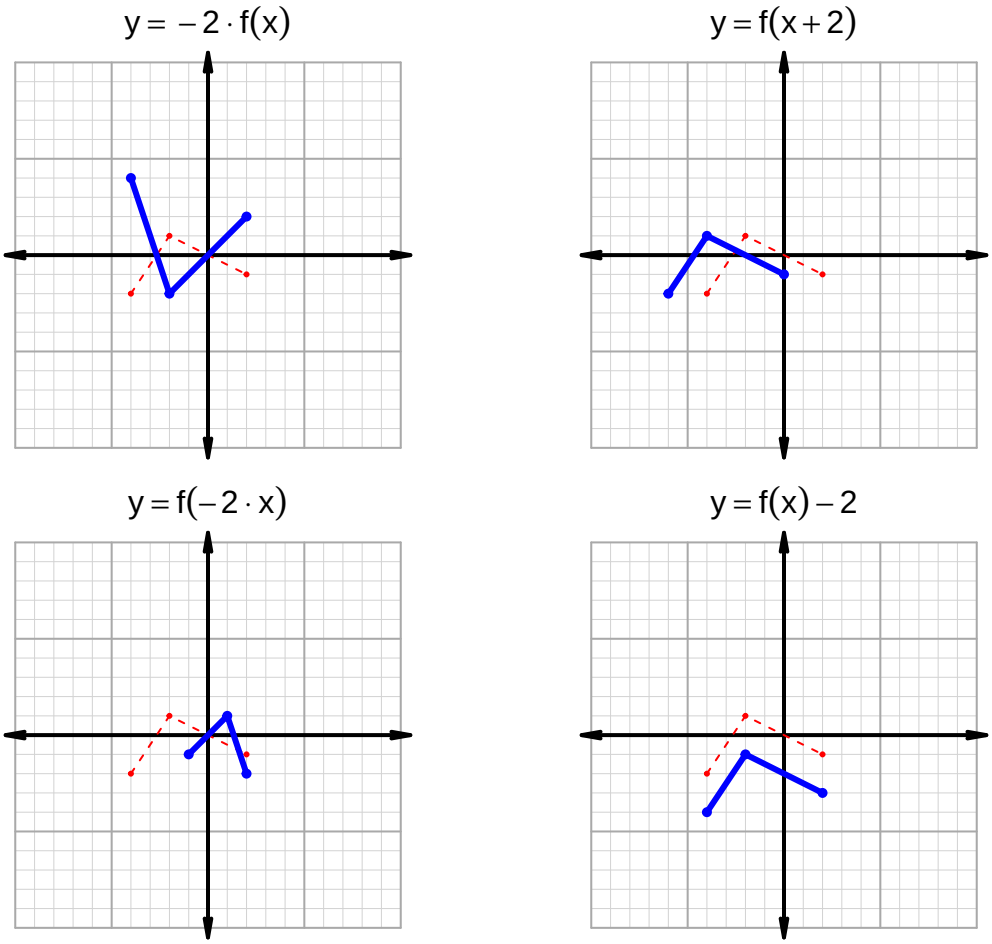


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(-9, 0) \cup (3, 6)$
Negative	$(0, 3) \cup (6, 8)$
Increasing	$(-9, -3) \cup (1, 5)$
Decreasing	$(-3, 1) \cup (5, 8)$
Domain	$(-9, 8)$
Range	$(-6, 9)$

Intervals, Transformations, and Slope Solution (version 122)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 33$ and $x_2 = 49$. Express your answer as a reduced fraction.

x	$g(x)$
33	66
49	74
66	49
74	33

$\frac{f(49)-f(33)}{49-33} = \frac{74-66}{49-33} = \frac{8}{16}$

The greatest common factor of 8 and 16 is 8. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{1}{2}$$
