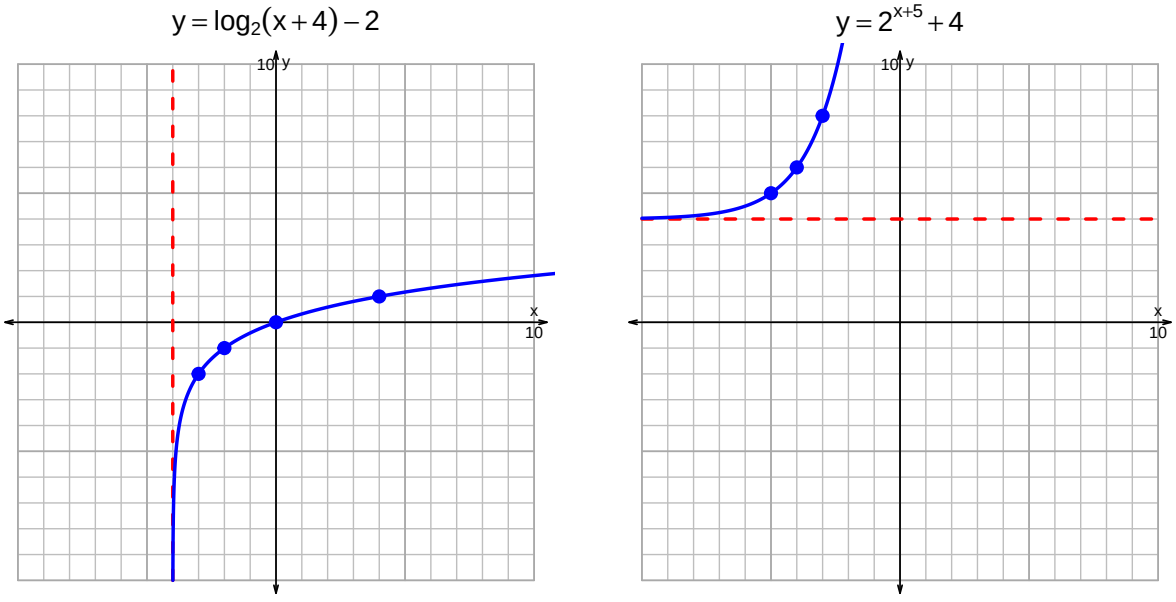
s18: EXP LOG (SLTN v343)

1. (10 pts) Graph $y = \log_2(x+4) - 2$ and $y = 2^{x+5} + 4$ on the grids below. Also, draw any asymptotes with dashed lines.



Somewhat useful hint: $2^3 = 8$, *and thus* $\log_2(8) = 3$.

2. (10 pts) Write (but do not evaluate) the solution to the equation below by writing a logarithmic expression. Please do not do any arithmetic; just move numbers around.

$$-17 = \left(\frac{-4}{3}\right) \cdot 10^{-5t/7}$$

Divide both sides by $\frac{-4}{3}$.

$$\frac{17 \cdot 3}{4} = 10^{-5t/7}$$

Take log, base 10, of both sides.

$$\log_{10}\left(\frac{17 \cdot 3}{4}\right) = \frac{-5t}{7}$$

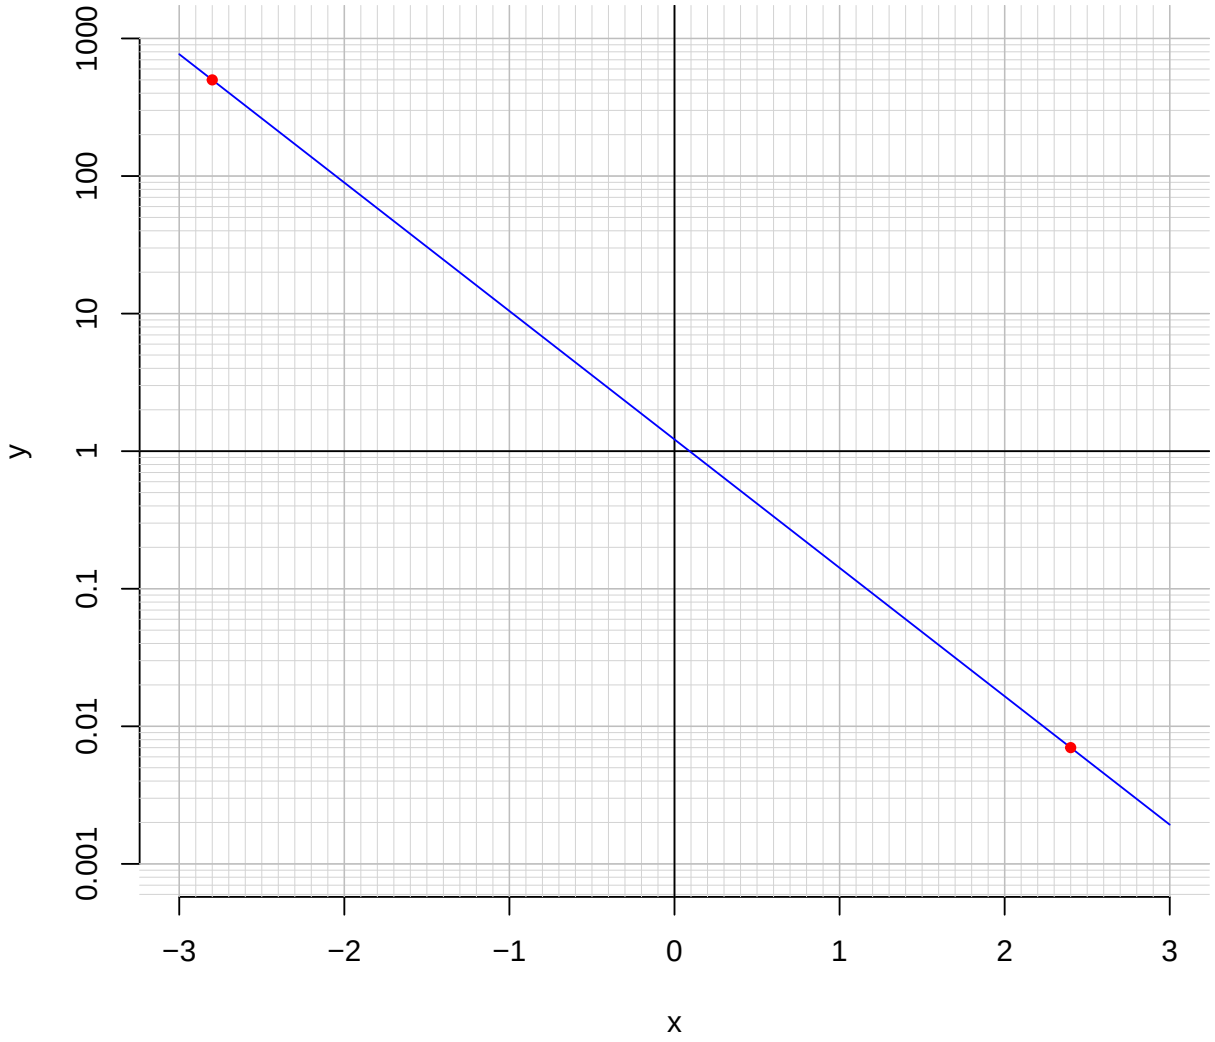
Divide both sides by $\frac{-5}{7}$.

$$\frac{-7}{5} \cdot \log_{10}\left(\frac{17 \cdot 3}{4}\right) = t$$

Switch sides.

$$t = \frac{-7}{5} \cdot \log_{10}\left(\frac{17 \cdot 3}{4}\right)$$

3. (10 pts) An exponential function $f(x) = 1.22 \cdot e^{-2.15x}$ is graphed below on a semi-log plot.



a. Using the plot above, evaluate $f(-2.8)$.

$$f(-2.8) = 500$$

b. The inverse function is logarithmic.

$$f^{-1}(x) = \frac{-1}{2.15} \cdot \ln\left(\frac{x}{1.22}\right)$$

Using the plot above, evaluate $f^{-1}(0.007)$.

$$f^{-1}(0.007) = 2.4$$
