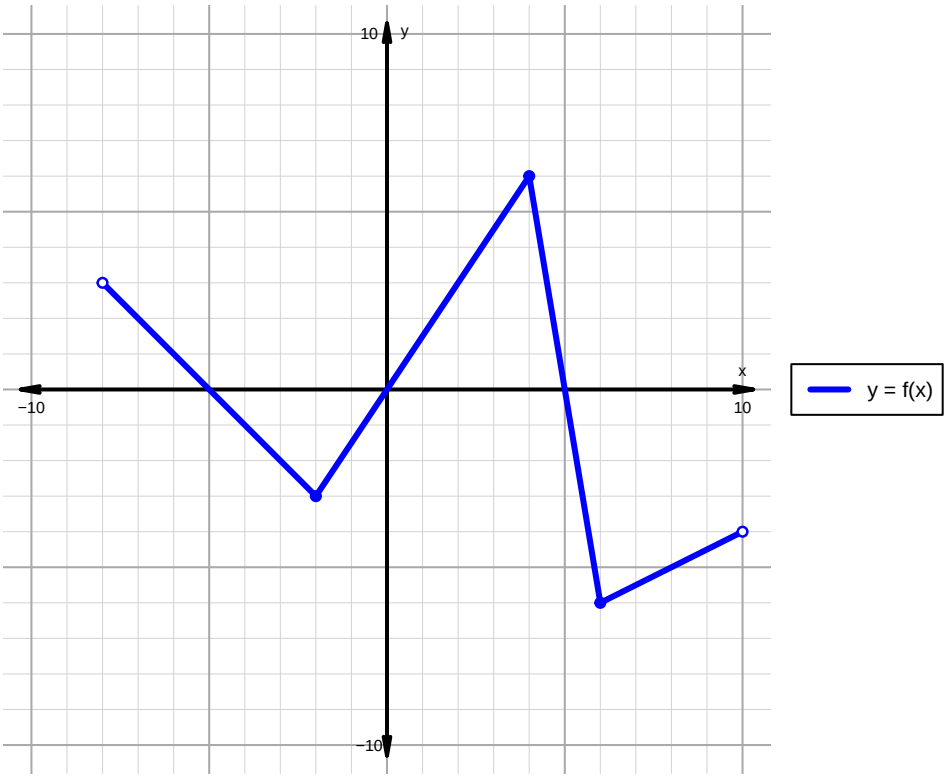
Intervals, Transformations, and Slope Solution (version 140)

1. The function f is graphed below.

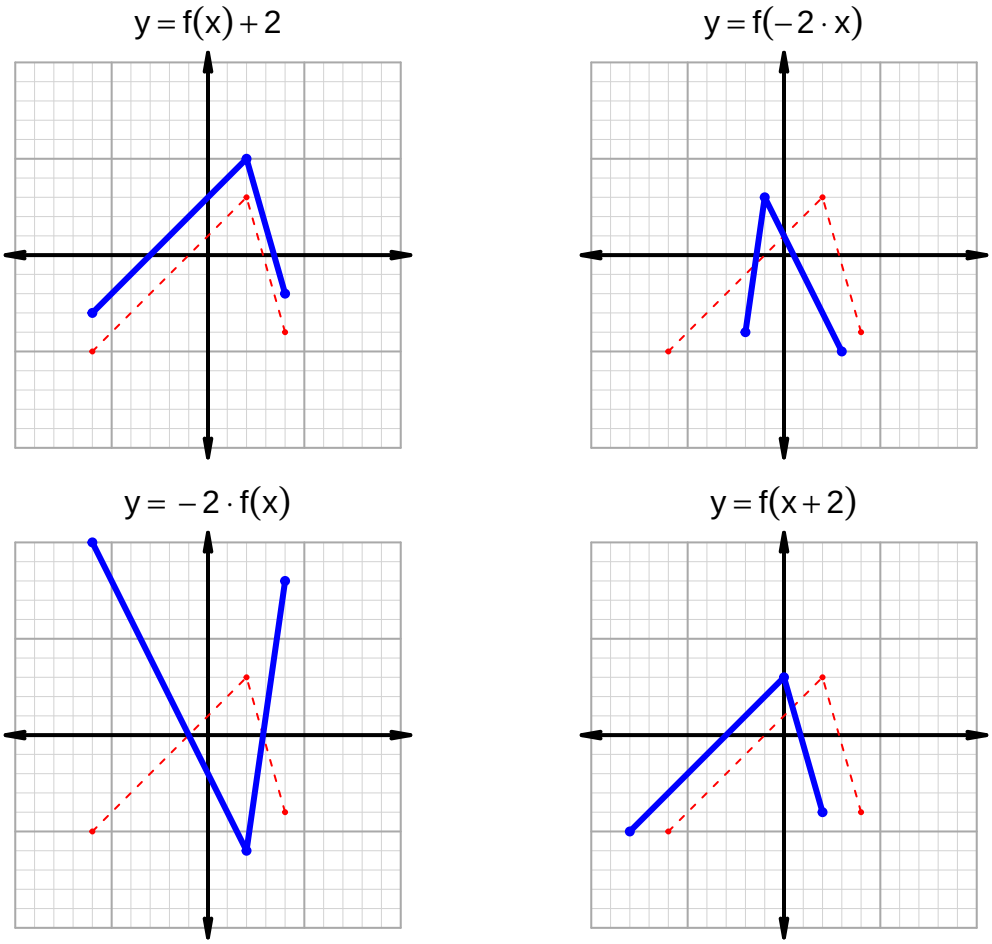


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(-8,-5)\cup(0,5)$
Negative	$(-5,0)\cup(5,10)$
Increasing	$(-2,4)\cup(6,10)$
Decreasing	$(-8,-2)\cup(4,6)$
Domain	$(-8,10)$
Range	$(-6,6)$

Intervals, Transformations, and Slope Solution (version 140)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 60$ and $x_2 = 95$. Express your answer as a reduced fraction.

x	$g(x)$
6	60
51	95
60	51
95	6

$\frac{f(95)-f(60)}{95-60} = \frac{6-51}{95-60} = \frac{-45}{35}$

The greatest common factor of -45 and 35 is 5. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{-9}{7}$$
