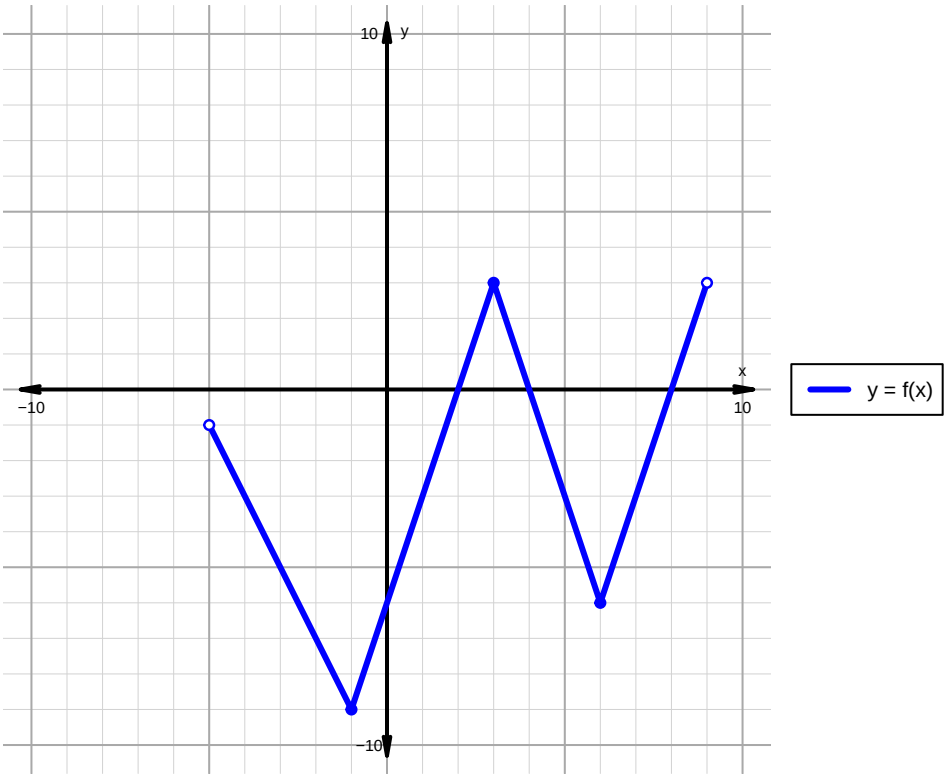
Intervals, Transformations, and Slope Solution (version 142)

1. The function f is graphed below.

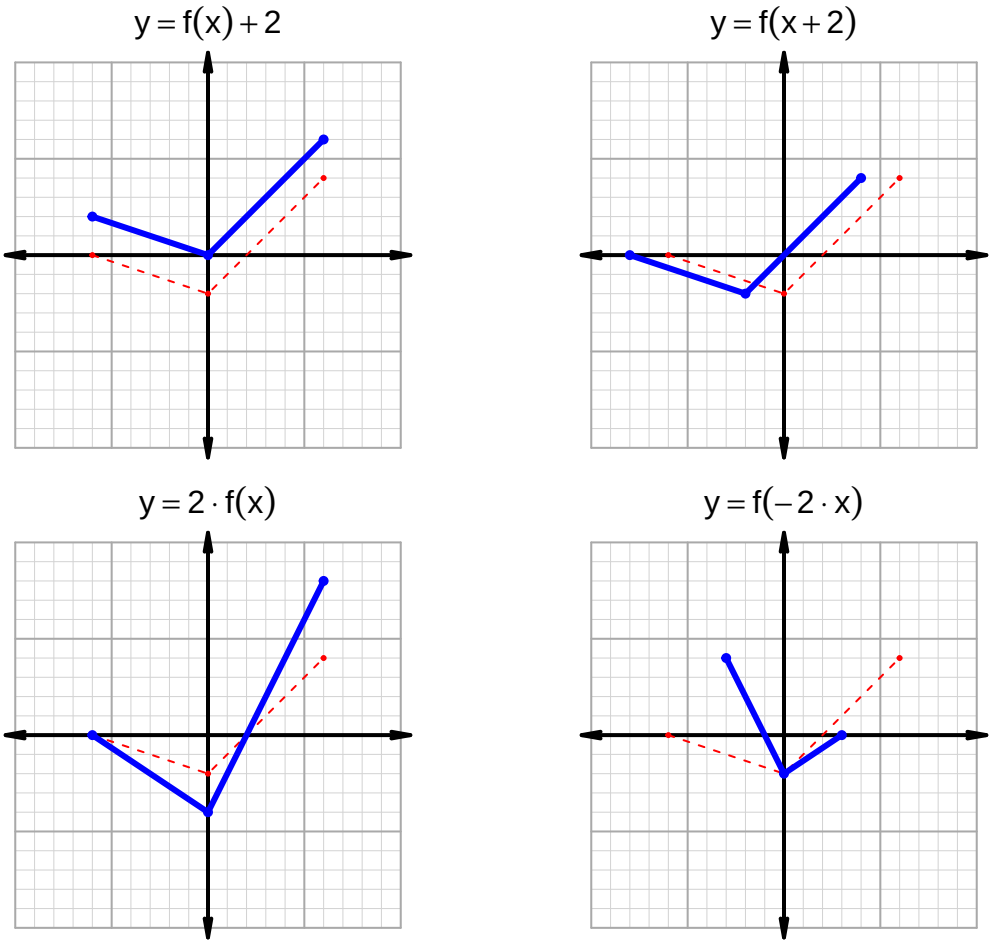


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(2, 4) \cup (8, 9)$
Negative	$(-5, 2) \cup (4, 8)$
Increasing	$(-1, 3) \cup (6, 9)$
Decreasing	$(-5, -1) \cup (3, 6)$
Domain	$(-5, 9)$
Range	$(-9, 3)$

Intervals, Transformations, and Slope Solution (version 142)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 65$ and $x_2 = 81$. Express your answer as a reduced fraction.

x	$g(x)$
13	81
41	65
65	13
81	41

$\frac{f(81)-f(65)}{81-65} = \frac{41-13}{81-65} = \frac{28}{16}$

The greatest common factor of 28 and 16 is 4. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{7}{4}$$
