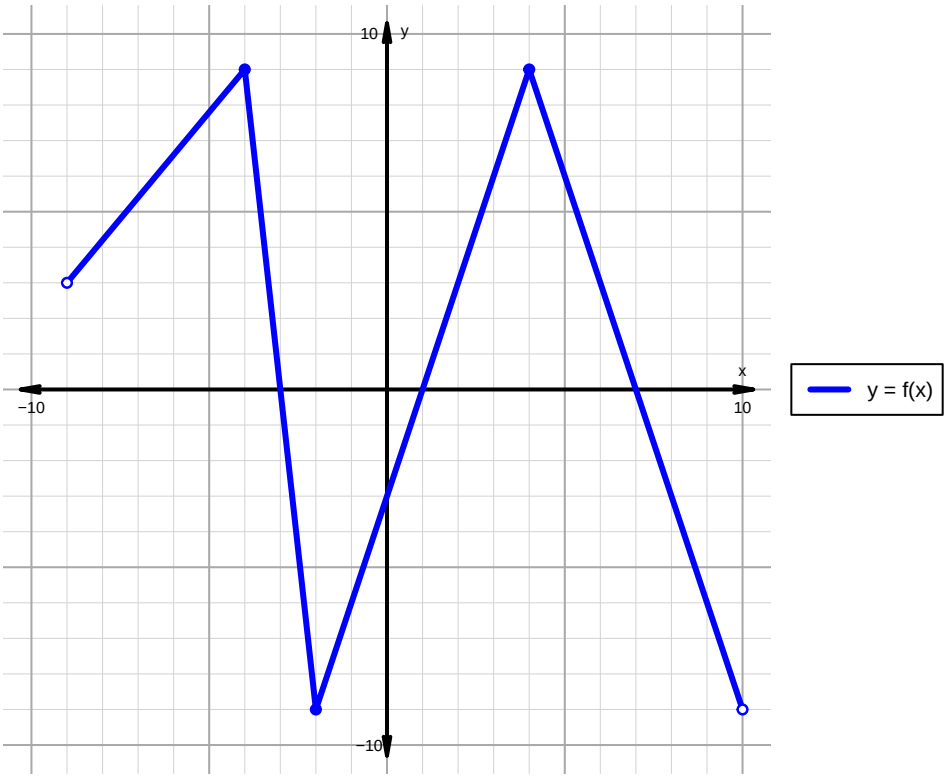
Intervals, Transformations, and Slope Practice (version 37)

1. The function f is graphed below.



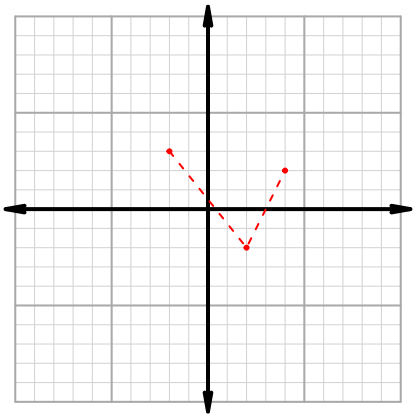
Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	
Negative	
Increasing	
Decreasing	
Domain	
Range	

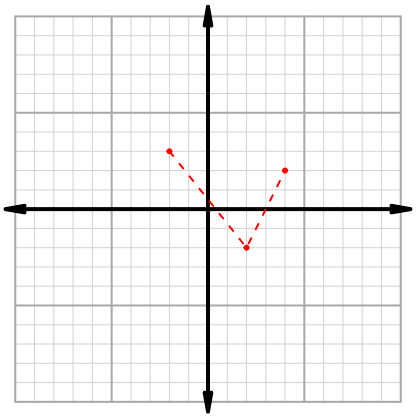
Intervals, Transformations, and Slope Practice (version 37)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. Please add the indicated transformed graphs indicated by the equations below using a solid line.

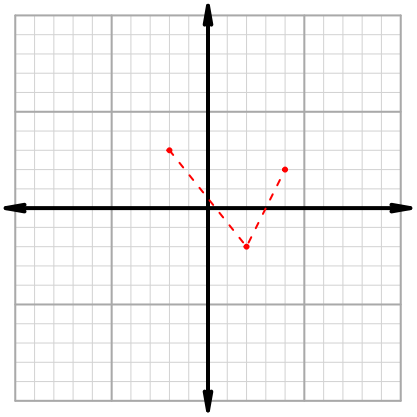
$y = -2 \cdot f(x)$



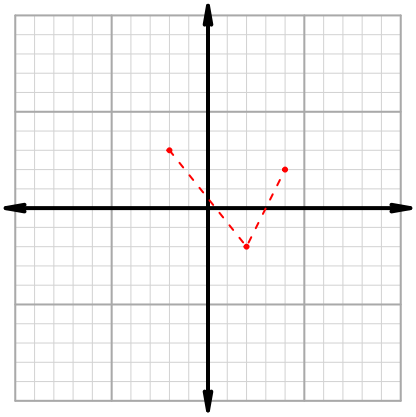
$y = f(x - 2)$



$y = f(-2 \cdot x)$



$y = f(x) + 2$



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 63$ and $x_2 = 78$. Express your answer as a reduced fraction.

x	$g(x)$
63	89
78	95
89	78
95	63
