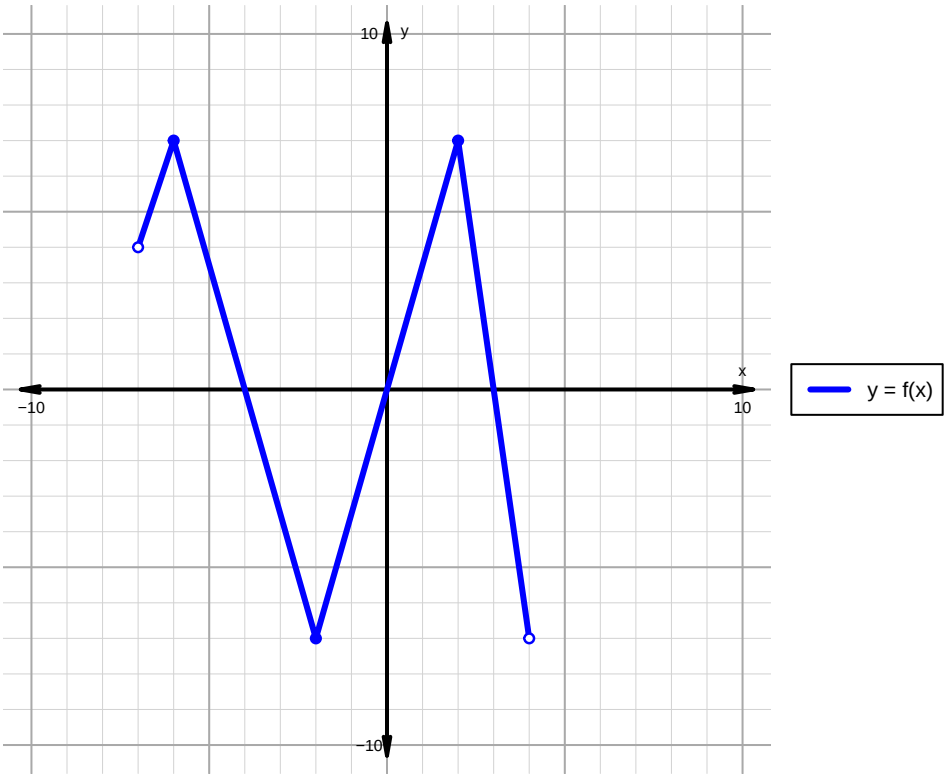
Intervals, Transformations, and Slope Solution (version 57)

1. The function f is graphed below.

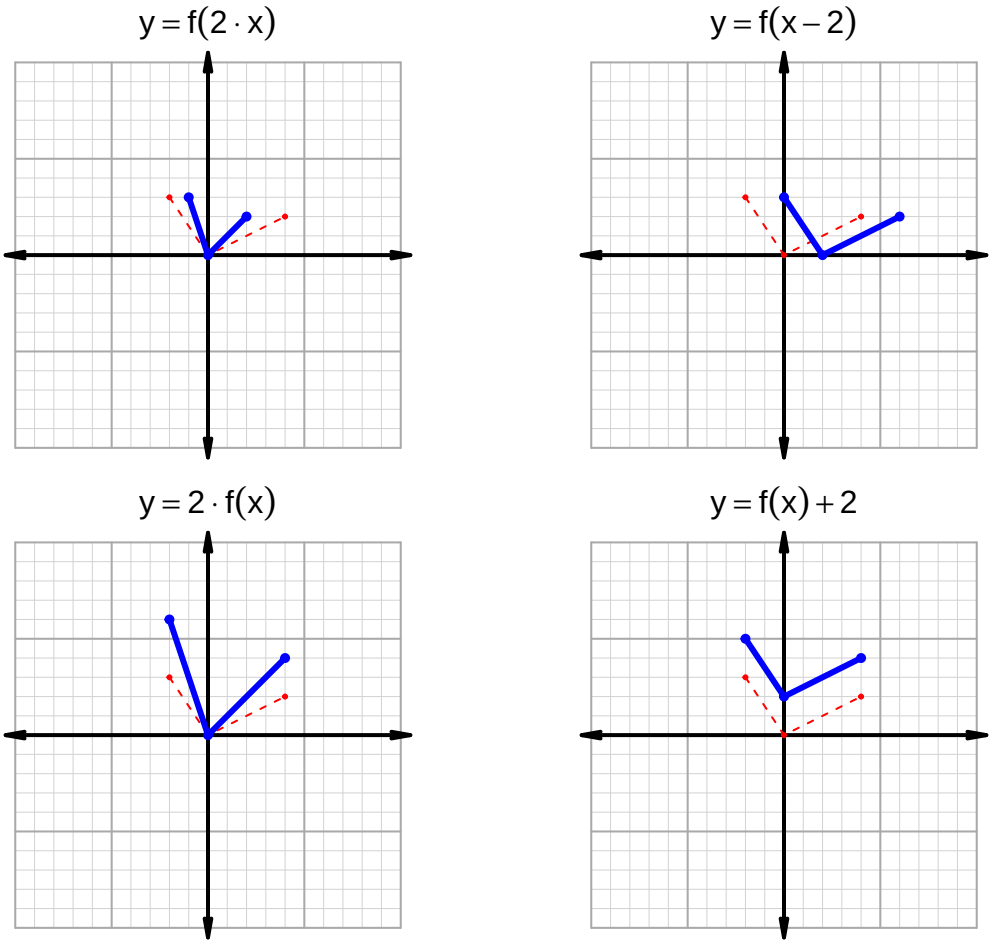


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(-7,-4)\cup(0,3)$
Negative	$(-4,0)\cup(3,4)$
Increasing	$(-7,-6)\cup(-2,2)$
Decreasing	$(-6,-2)\cup(2,4)$
Domain	$(-7,4)$
Range	$(-7,7)$

Intervals, Transformations, and Slope Solution (version 57)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 18$ and $x_2 = 53$. Express your answer as a reduced fraction.

x	$g(x)$
18	73
53	66
66	18
73	53

$\frac{g(53)-g(18)}{53-18} = \frac{66-73}{53-18} = \frac{-7}{35}$

The greatest common factor of -7 and 35 is 7. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{-1}{5}$$
