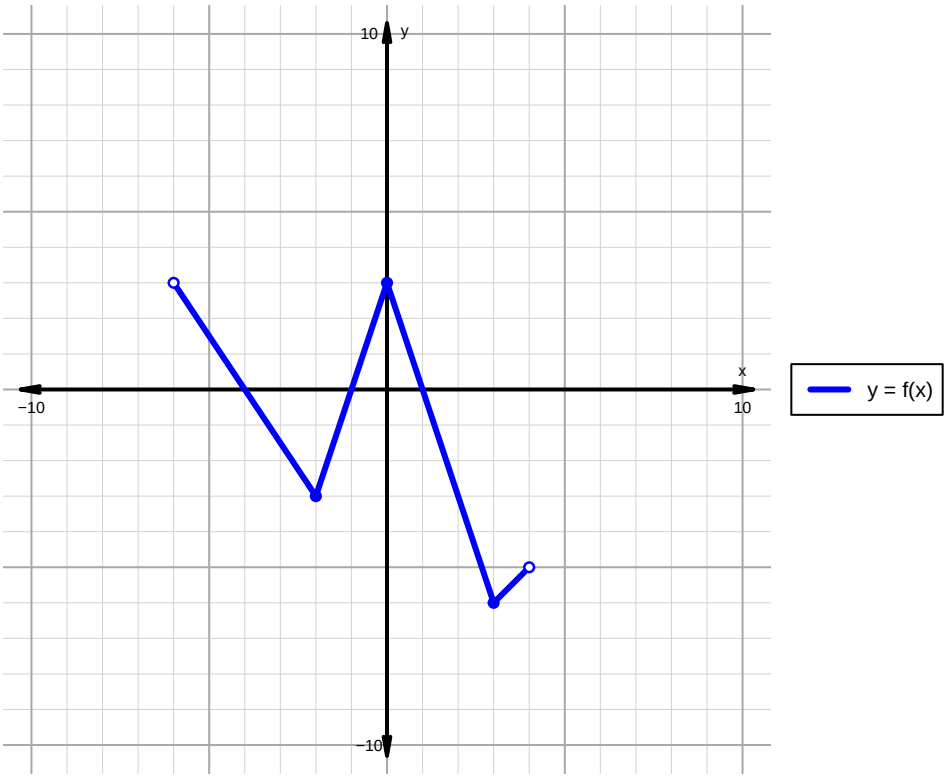
Intervals, Transformations, and Slope Solution (version 173)

1. The function f is graphed below.

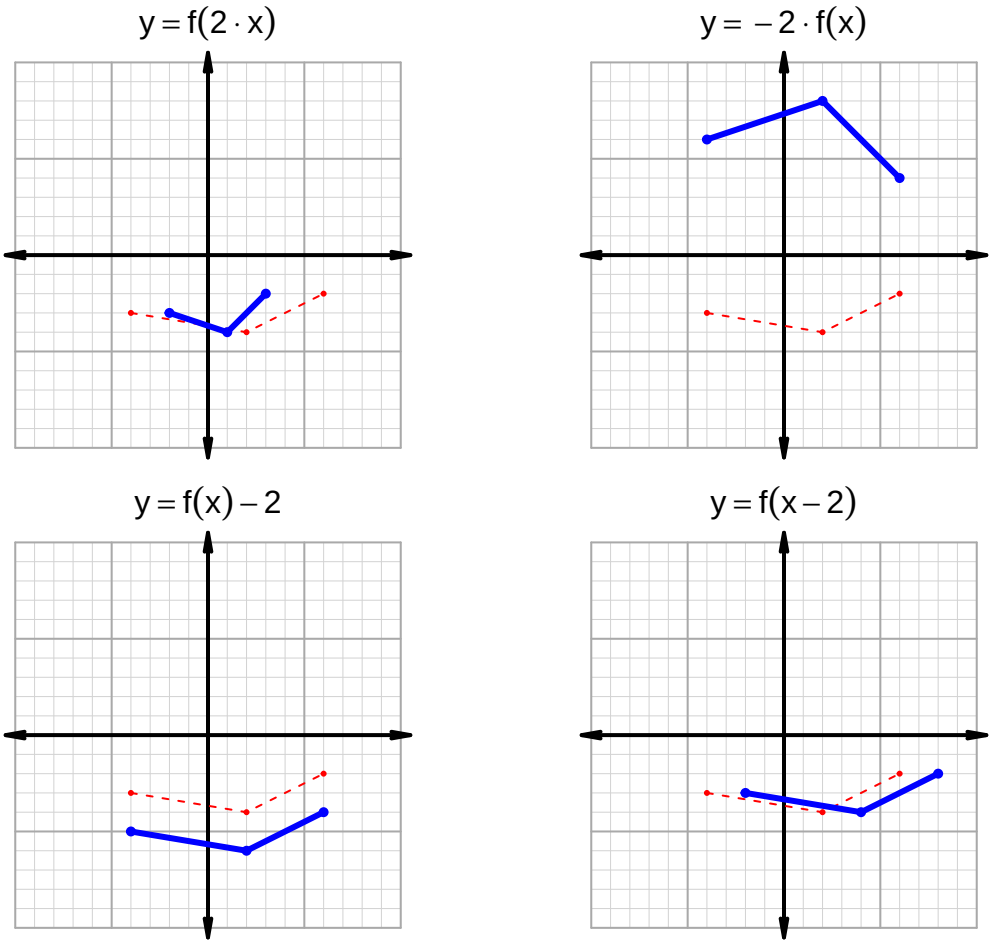


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(-6,-4)\cup(-1,1)$
Negative	$(-4,-1)\cup(1,4)$
Increasing	$(-2,0)\cup(3,4)$
Decreasing	$(-6,-2)\cup(0,3)$
Domain	$(-6,4)$
Range	$(-6,3)$

Intervals, Transformations, and Slope Solution (version 173)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 27$ and $x_2 = 39$. Express your answer as a reduced fraction.

x	$g(x)$
27	93
39	63
63	27
93	39

$\frac{g(39)-g(27)}{39-27} = \frac{63-93}{39-27} = \frac{-30}{12}$

The greatest common factor of -30 and 12 is 6. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{-5}{2}$$
