Unit-2 Mastery Assessment (version 626)

Question 1 (10 points)

Let f represent a function. If $f[9] = 49$, then there exists a knowable solution to the equation below.

$$y = 5 \cdot \left(f\left[\frac{x}{2} - 15 \right] - 44 \right)$$

Find the solution.

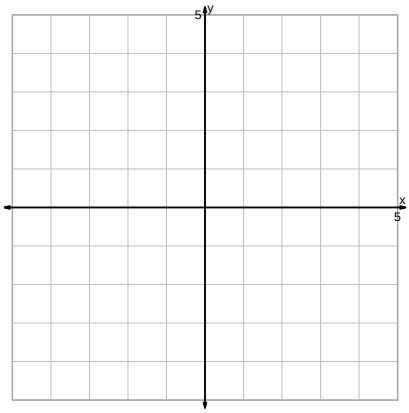
$x =$

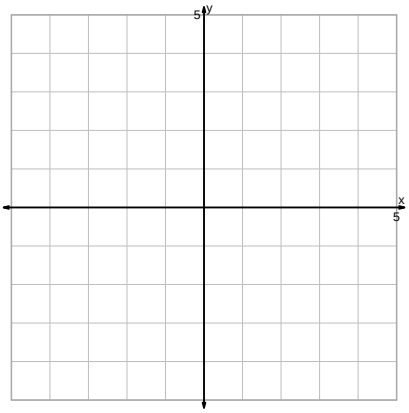
$y =$

Question 2 (20 points)

Graph the equations accurately. For each integer-integer point on the parent, indicate the corresponding point precisely. Also, with dashed lines, indicate any asymptotes.

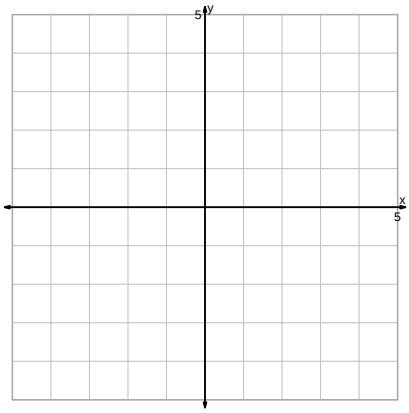
$y = 2 \cdot 2^x$

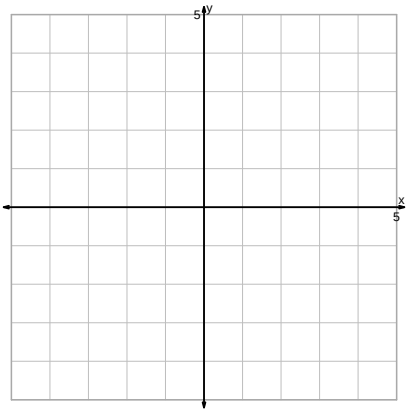




$y = x^3 + 2$

$y = \left(\frac{x}{2} \right)^3$

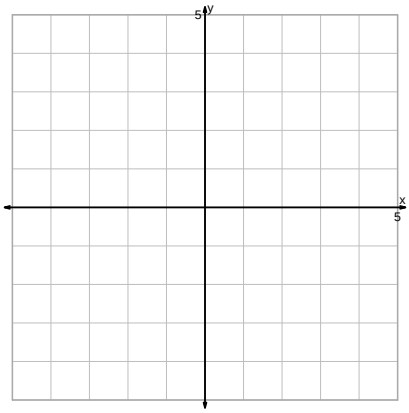


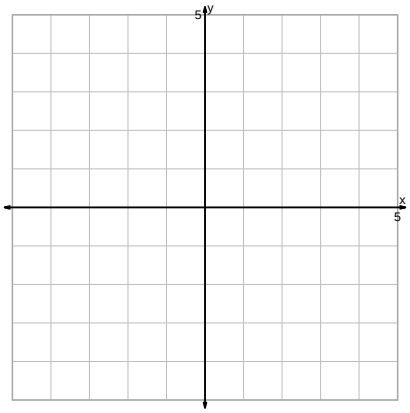


$y = -\log_2(x)$

Question 2 continued...

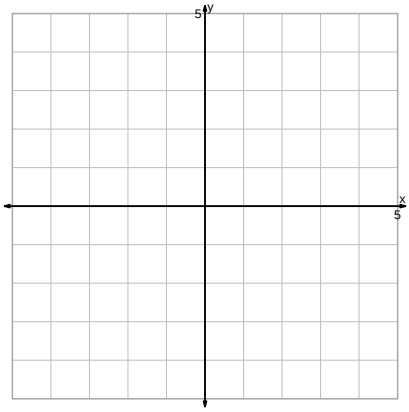
$y = \dfrac{\log_2(x)}{2}$

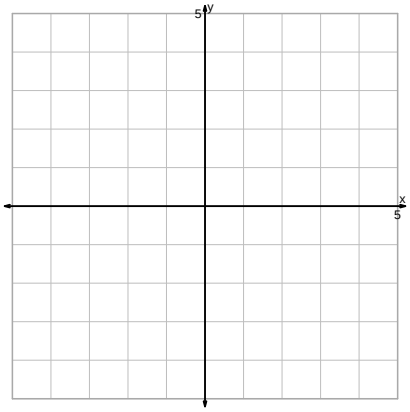




$y = \sqrt[3]{2x}$

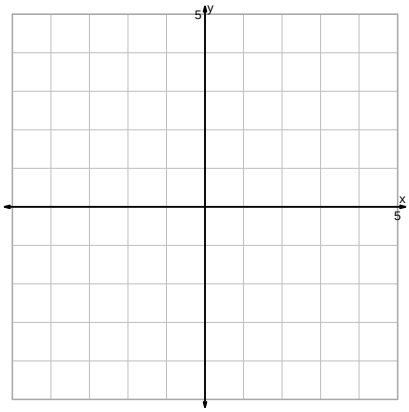
$y = (x-2)^2$

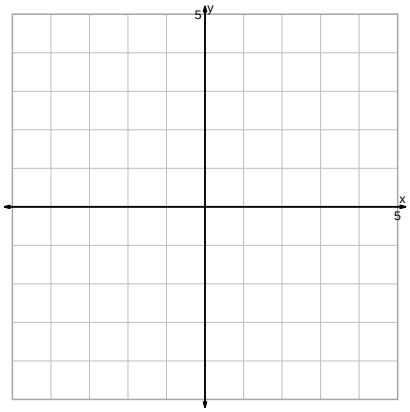




$y = 2^{-x}$

$y = \sqrt{x+2}$

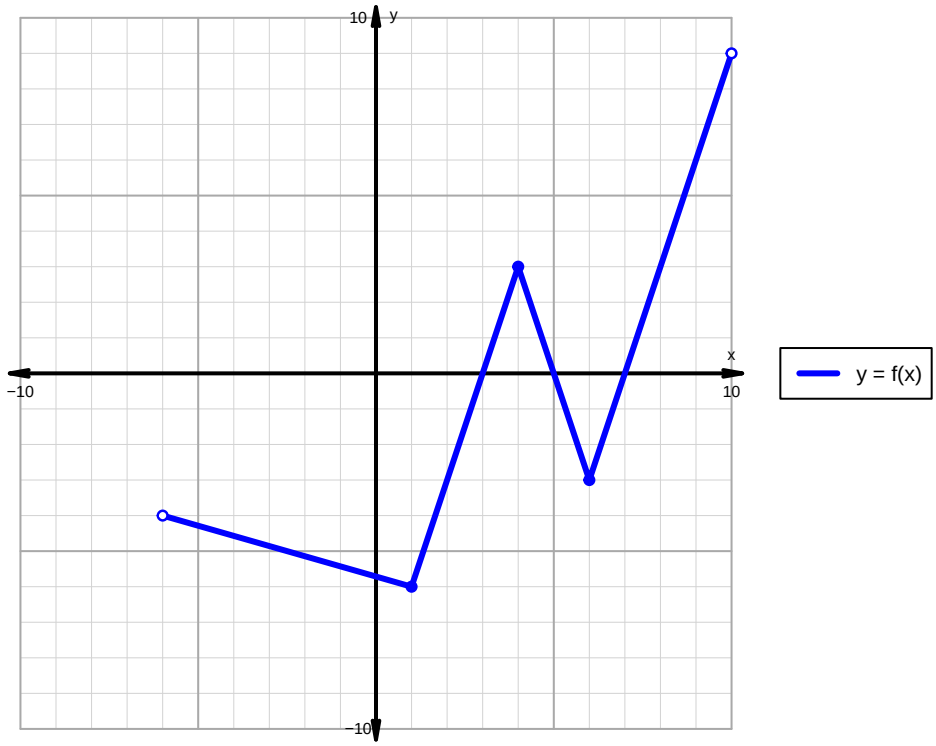




$y = \sqrt[3]{x} - 2$

Question 3 (20 points)

A function is graphed below.



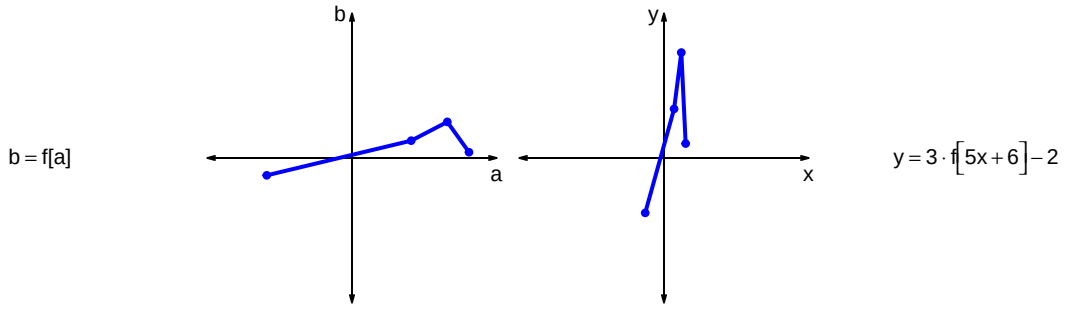
Indicate the following intervals using interval notation.

Feature	Where
Positive	
Negative	
Increasing	
Decreasing	
Domain	
Range	

Question 4 (20 points)

Let f represent a function. The curves $b = f[a]$ and $y = 3 \cdot f[5x + 6] - 2$ are represented below in a table and on graphs.

a	b	x	y
-59	-12	-13	-38
41	12	7	34
66	25	12	73
81	4	15	10



a. Write formulas for calculating x from a and calculating y from b. (Or, write the coordinate transformation formula.)

b. What geometric transformations (using words like translation, stretch, and shrink), and in what order, would transform the first curve $y = f[x]$ into the second curve $y = 3 \cdot f[5x + 6] - 2$?

Question 5 (10 points)

A parent square-root function is transformed in the following ways:

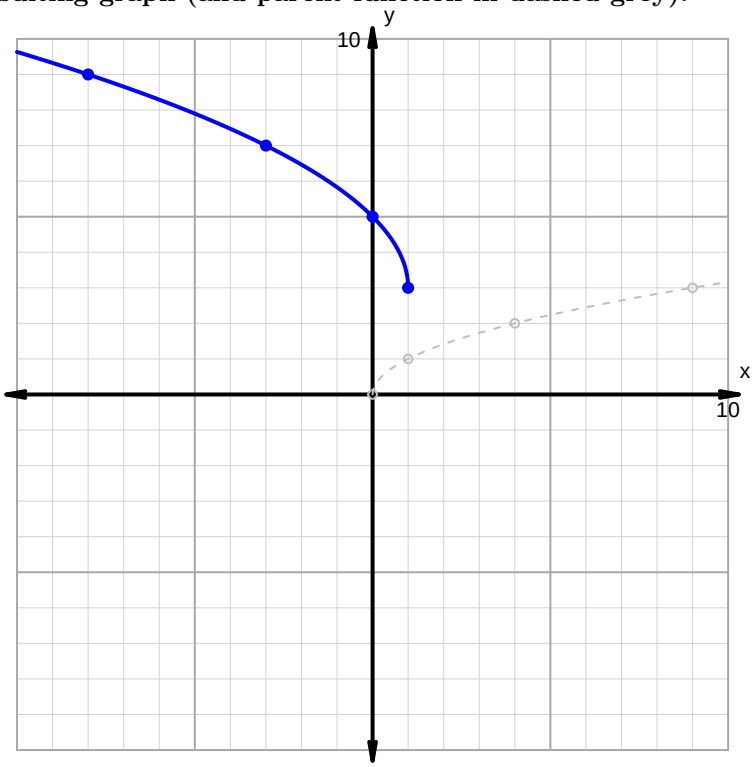
Horizontal transformations

1. Translate left by distance 1.
2. Horizontal reflection over y axis.

Vertical transformations

1. Vertical stretch by factor 2.
2. Translate up by distance 3.

Resulting graph (and parent function in dashed grey):

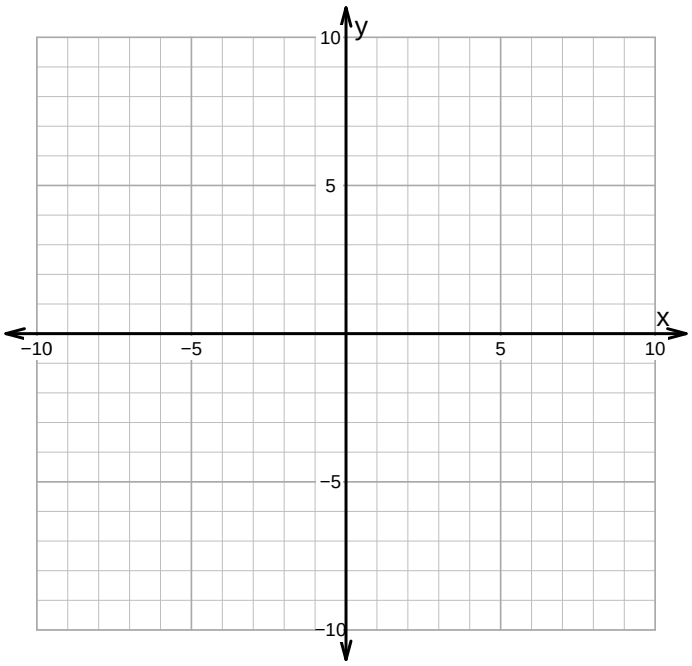


- What is the equation for the curve shown above?

Question 6 (20 points)

Make an accurate graph, and describe locations of features.

$$y \;=\; -2 \cdot |x + 5| + 8$$



Feature	Where
Domain	
Range	
Positive	
Negative	
Increasing	
Decreasing
