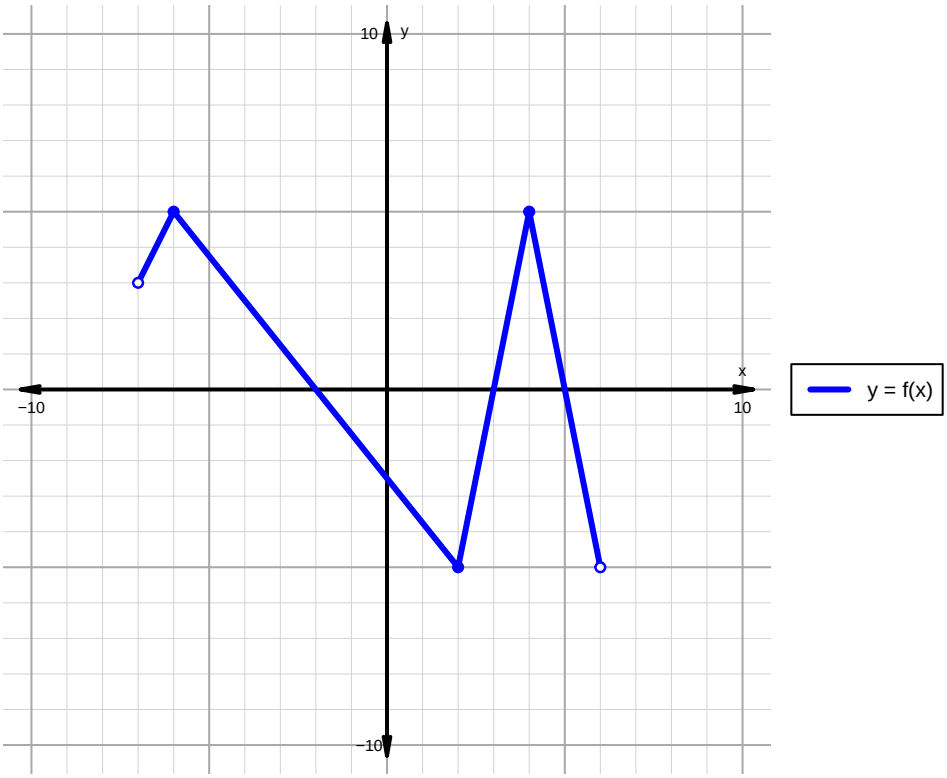
Intervals, Transformations, and Slope Solution (version 104)

1. The function f is graphed below.

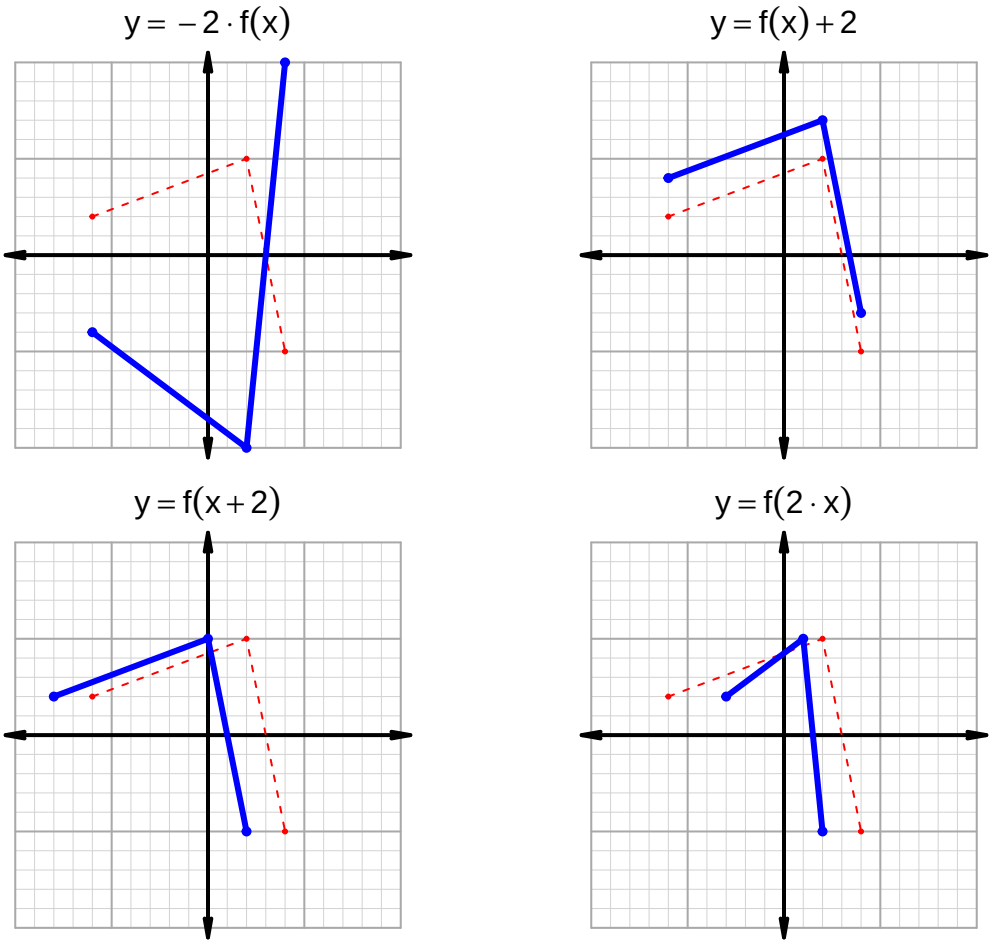


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(-7,-2)\cup(3,5)$
Negative	$(-2,3)\cup(5,6)$
Increasing	$(-7,-6)\cup(2,4)$
Decreasing	$(-6,2)\cup(4,6)$
Domain	$(-7,6)$
Range	$(-5,5)$

Intervals, Transformations, and Slope Solution (version 104)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 27$ and $x_2 = 39$. Express your answer as a reduced fraction.

x	$g(x)$
3	27
23	39
27	23
39	3

$\frac{f(39)-f(27)}{39-27} = \frac{3-23}{39-27} = \frac{-20}{12}$

The greatest common factor of -20 and 12 is 4. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{-5}{3}$$
