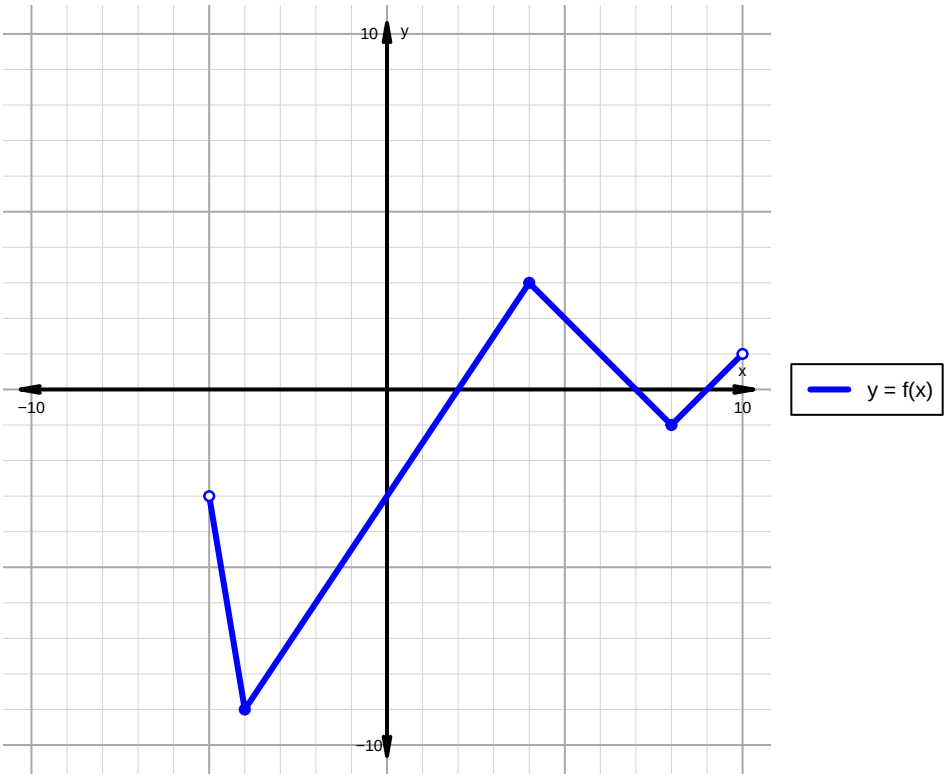
Intervals, Transformations, and Slope Solution (version 78)

1. The function f is graphed below.

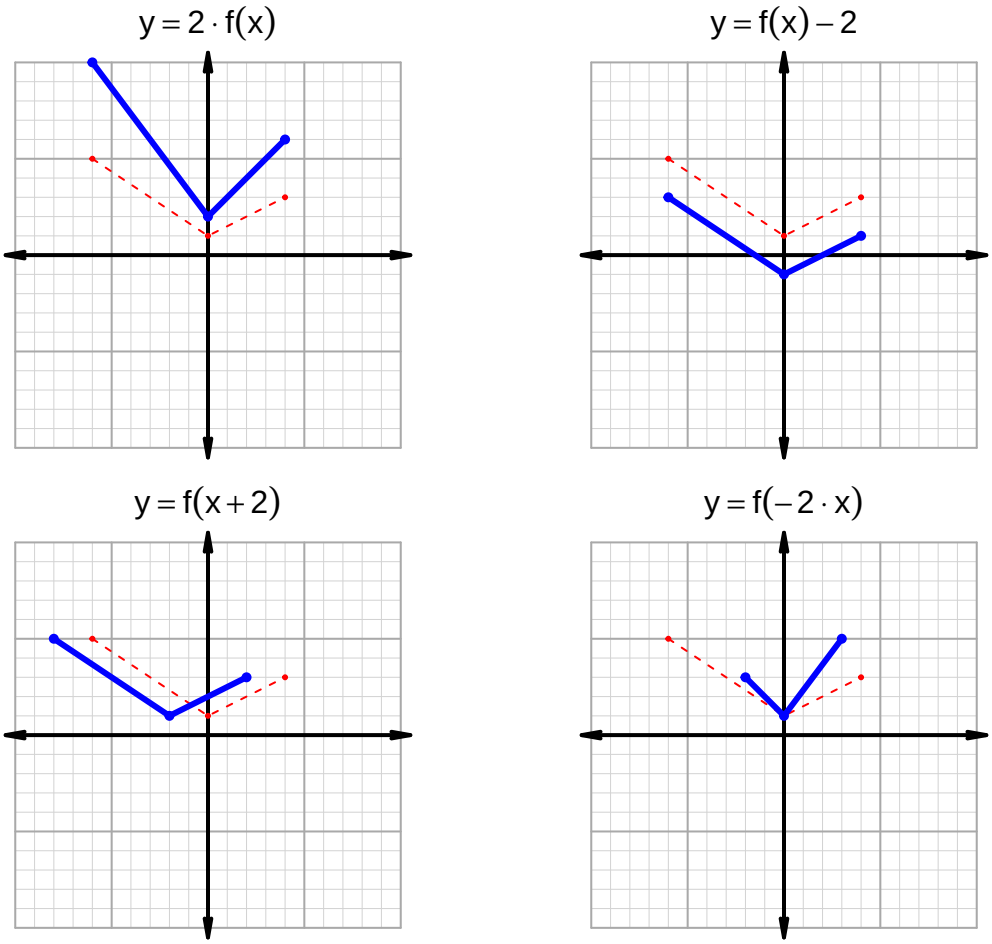


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(2, 7) \cup (9, 10)$
Negative	$(-5, 2) \cup (7, 9)$
Increasing	$(-4, 4) \cup (8, 10)$
Decreasing	$(-5, -4) \cup (4, 8)$
Domain	$(-5, 10)$
Range	$(-9, 3)$

Intervals, Transformations, and Slope Solution (version 78)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 15$ and $x_2 = 30$. Express your answer as a reduced fraction.

x	$g(x)$
15	95
30	68
68	15
95	30

$\frac{g(30)-g(15)}{30-15} = \frac{68-95}{30-15} = \frac{-27}{15}$

The greatest common factor of -27 and 15 is 3. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{-9}{5}$$
