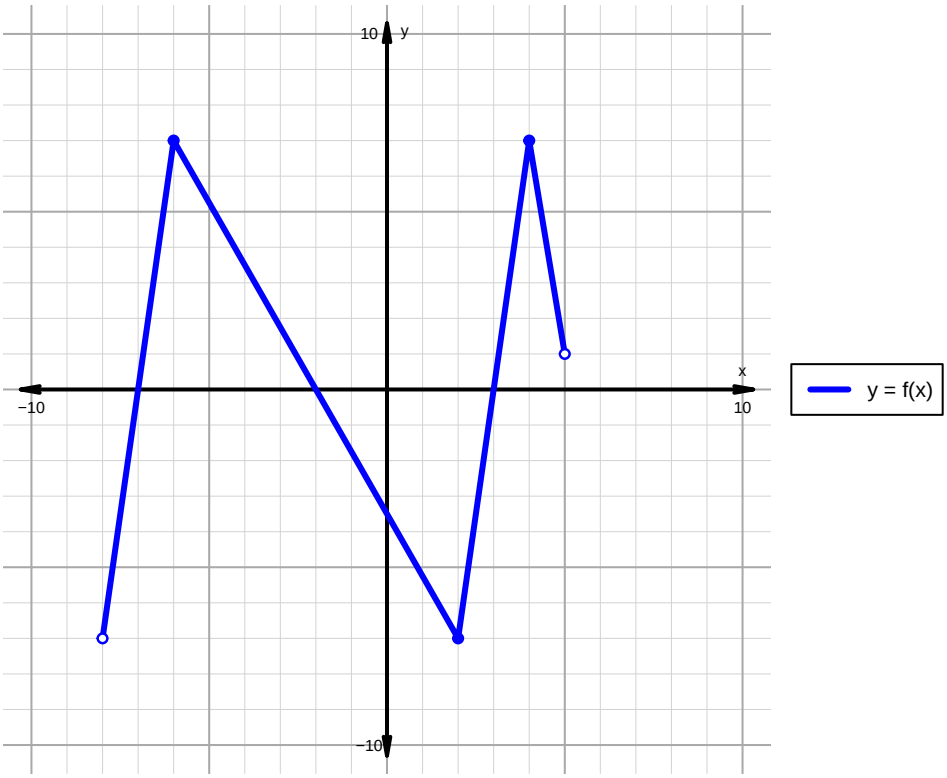
Intervals, Transformations, and Slope Solution (version 71)

1. The function f is graphed below.

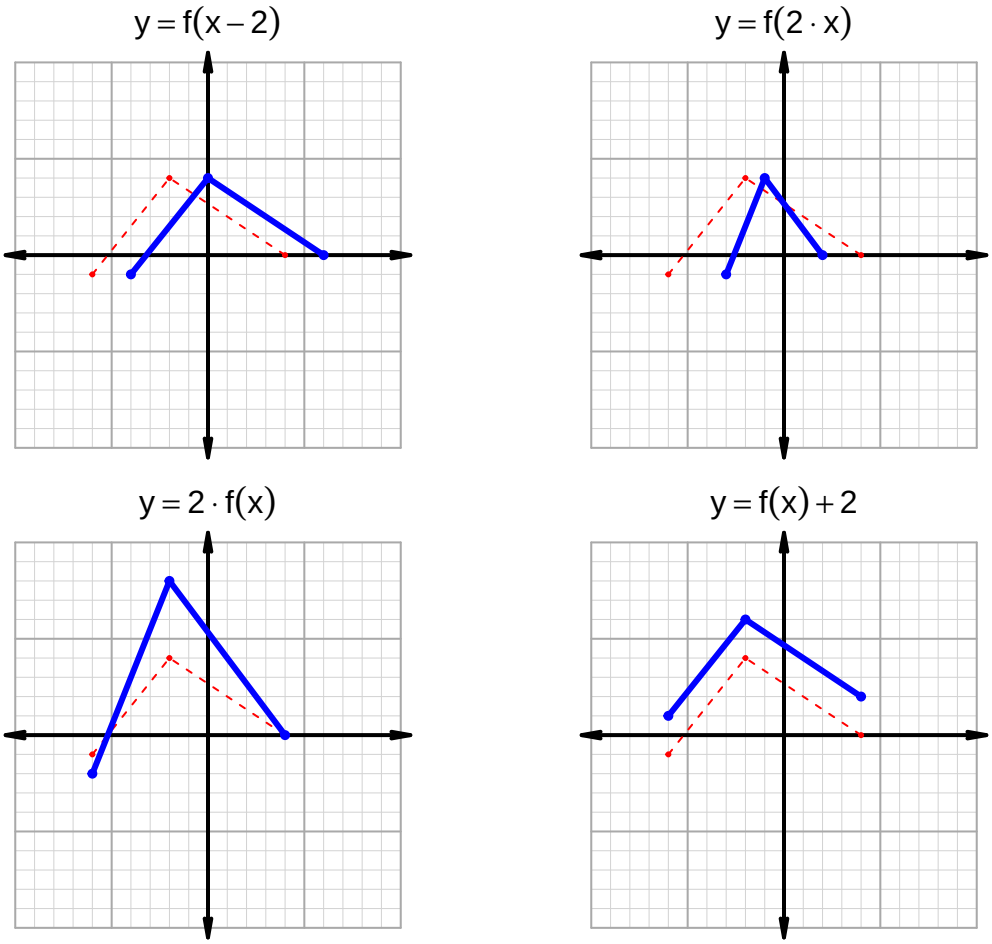


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(-7,-2)\cup(3,5)$
Negative	$(-8,-7)\cup(-2,3)$
Increasing	$(-8,-6)\cup(2,4)$
Decreasing	$(-6,2)\cup(4,5)$
Domain	$(-8,5)$
Range	$(-7,7)$

Intervals, Transformations, and Slope Solution (version 71)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 31$ and $x_2 = 76$. Express your answer as a reduced fraction.

x	$g(x)$
31	63
53	31
63	76
76	53

$\frac{g(76)-g(31)}{76-31} = \frac{53-63}{76-31} = \frac{-10}{45}$

The greatest common factor of -10 and 45 is 5. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{-2}{9}$$
