p1020: graded take-home open-note practice exam (version 220)

Question 1

Let f represent a function. If $f[36] = 13$, then there exists a knowable solution to the equation below.

$$y = 6 \cdot (f[4\,(x+2)] - 8)$$

Find the solution.

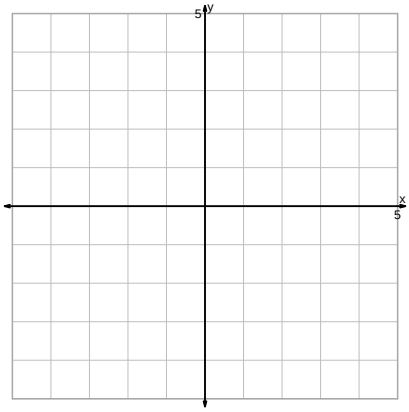
$x =$

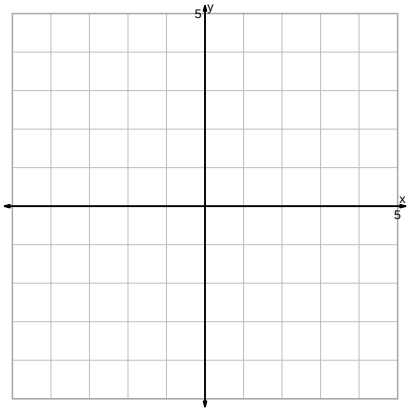
$y =$

Question 2

Graph the equations accurately. For each integer-integer point on the parent, indicate the corresponding point precisely. Also, with dashed lines, indicate any asymptotes.

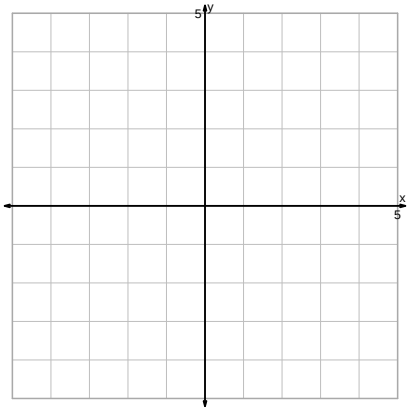
$y = \sqrt{-x}$

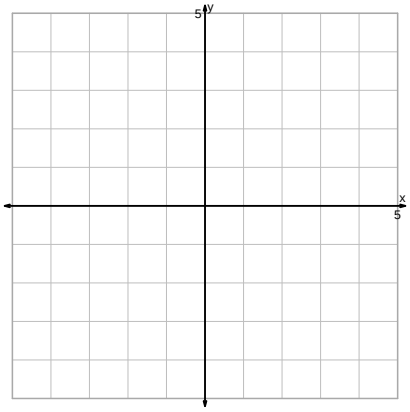




$y = 2^{x-2}$

$y = 2 \cdot \sqrt[3]{x}$

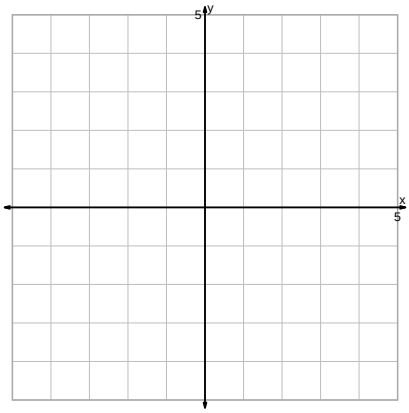


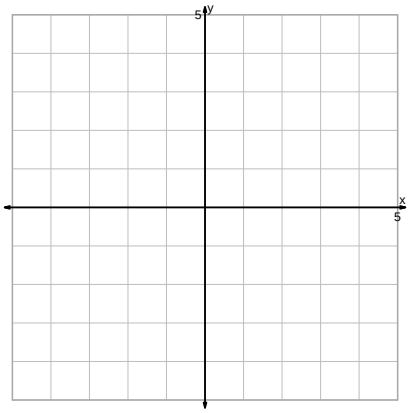


$y = \sqrt{x+2}$

Question 2 continued...

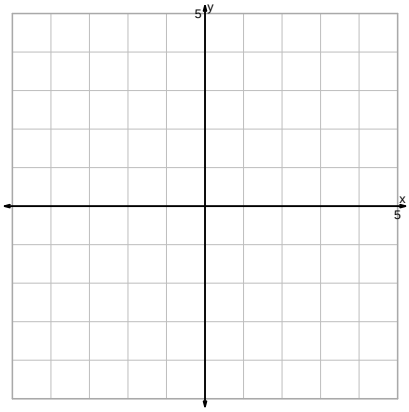
$y = \left(\frac{x}{2}\right)^2$

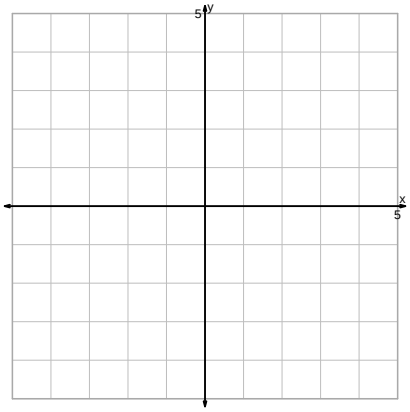




$y = \sqrt[3]{2x}$

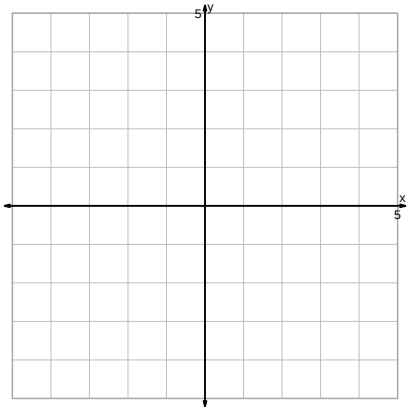
$y = x^3 + 2$

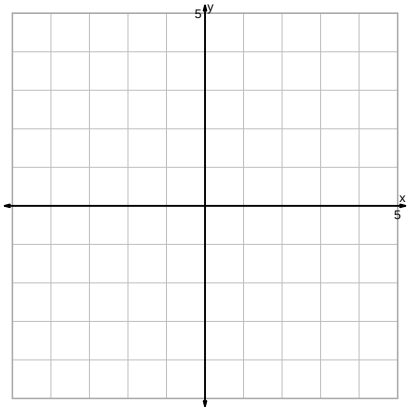




$y = -\log_2\left(x\right)$

$y = \log_2\left(x\right) - 2$

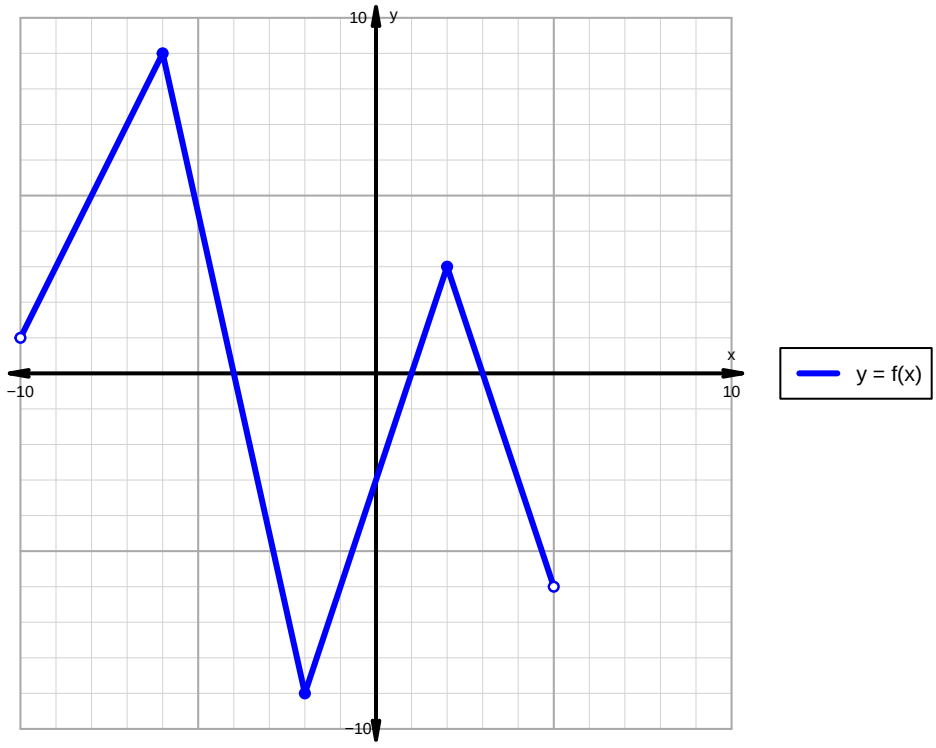




$y = \frac{x^2}{2}$

Question 3

A function is graphed below.



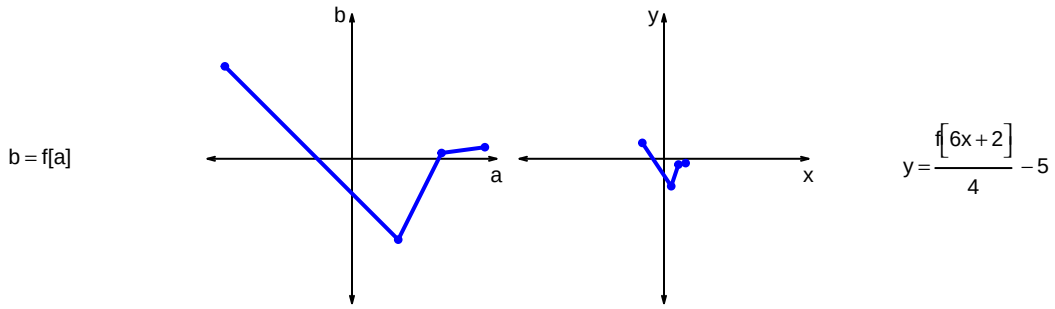
Indicate the following intervals using interval notation.

Feature	Where
Positive	
Negative	
Increasing	
Decreasing	
Domain	
Range	

Question 4

Let f represent a function. The curves $b = f[a]$ and $y = \frac{f[6x+2]}{4} - 5$ are represented below in a table and on graphs.

a	b	x	y
-88	64	-15	11
32	-56	5	-19
62	4	10	-4
92	8	15	-3



a. Write formulas for calculating x from a and calculating y from b. (Or, write the coordinate transformation formula.)

b. What geometric transformations (using words like translation, stretch, and shrink), and in what order, would transform the first curve $y = f[x]$ into the second curve $y = \frac{f[6x+2]}{4} - 5$?

Question 5

A parent square-root function is transformed in the following ways:

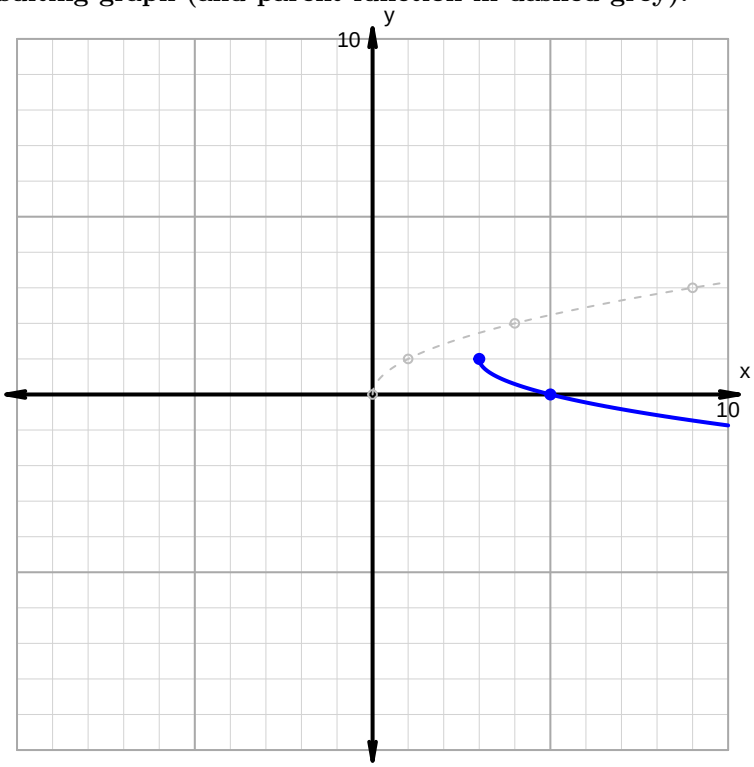
Horizontal transformations

1. Horizontal stretch by factor 2.
2. Translate right by distance 3.

Vertical transformations

1. Vertical reflection over x axis.
2. Translate up by distance 1.

Resulting graph (and parent function in dashed grey):

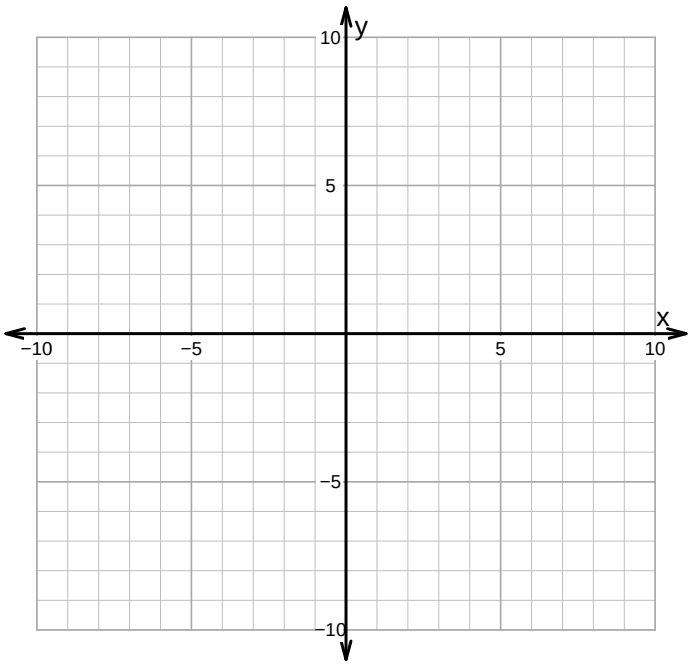


- What is the equation for the curve shown above?

Question 6

Make an accurate graph, and describe locations of features.

$$y = \frac{-1}{3} \cdot |x + 2| + 2$$



Feature	Where
Domain	
Range	
Positive	
Negative	
Increasing	
Decreasing
