Unit-2 Mastery Assessment (version 648)

Question 1 (10 points)

Let f represent a function. If $f[5] = 44$, then there exists a knowable solution to the equation below.

$$y = 2 \cdot \left(f\left[\frac{x}{14} + 3 \right] - 33 \right)$$

Find the solution.

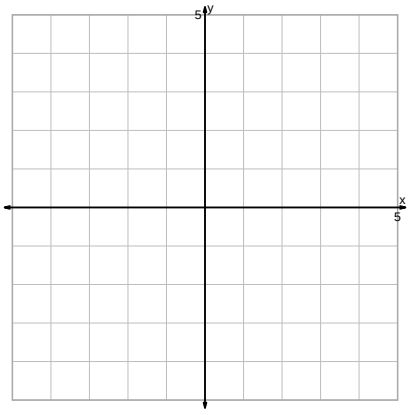
$x =$

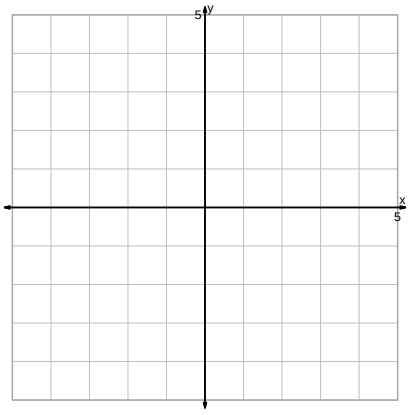
$y =$

Question 2 (20 points)

Graph the equations accurately. For each integer-integer point on the parent, indicate the corresponding point precisely. Also, with dashed lines, indicate any asymptotes.

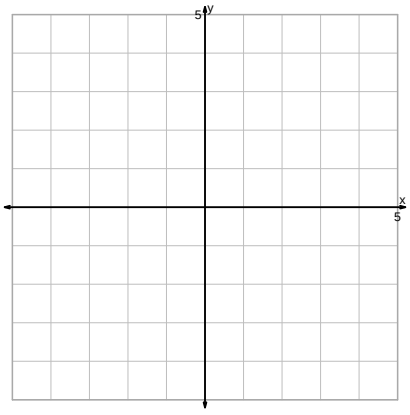
$y = \sqrt[3]{x} + 2$

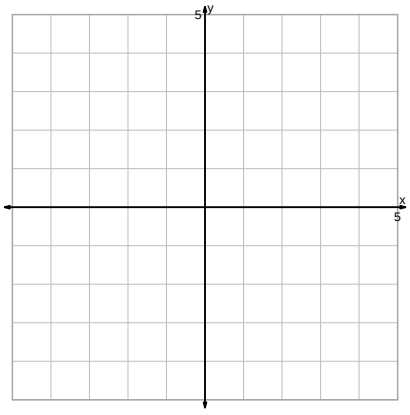




$y = (x+2)^3$

$y = \sqrt[3]{2x}$

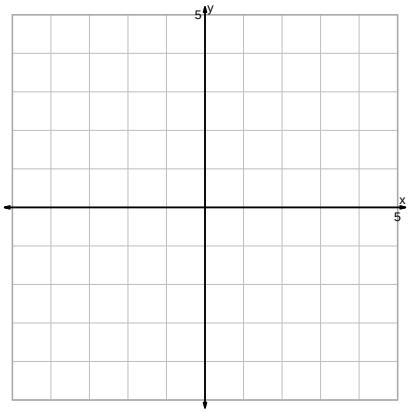


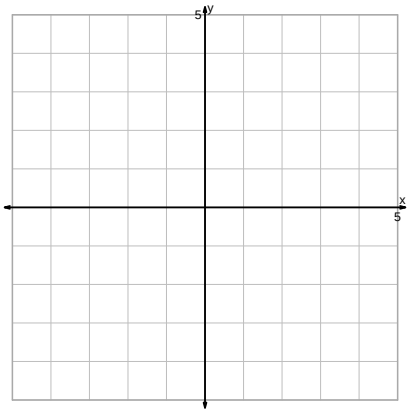


$y = (x-2)^2$

Question 2 continued...

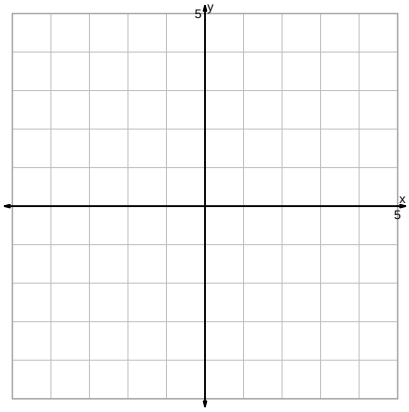
$y = \log_2(-x)$

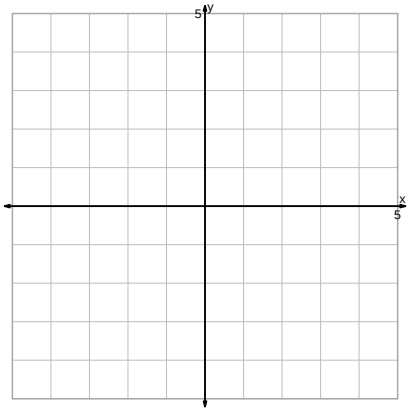




$y = 2^{\frac{x}{2}}$

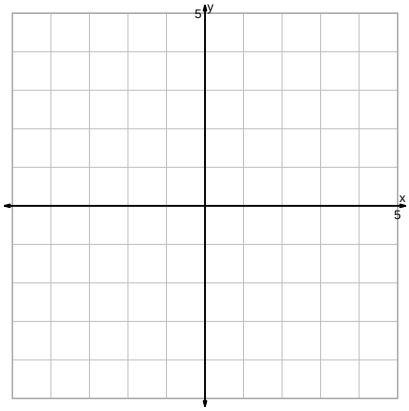
$y = \frac{\sqrt{x}}{2}$

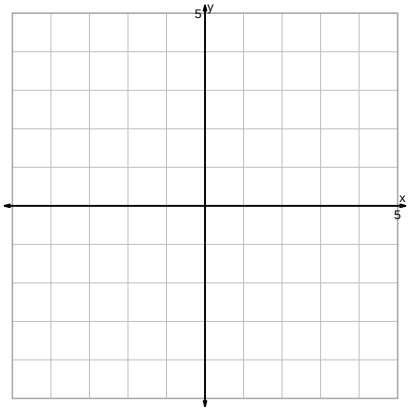




$y = \log_2(x) - 2$

$y = -2^x$

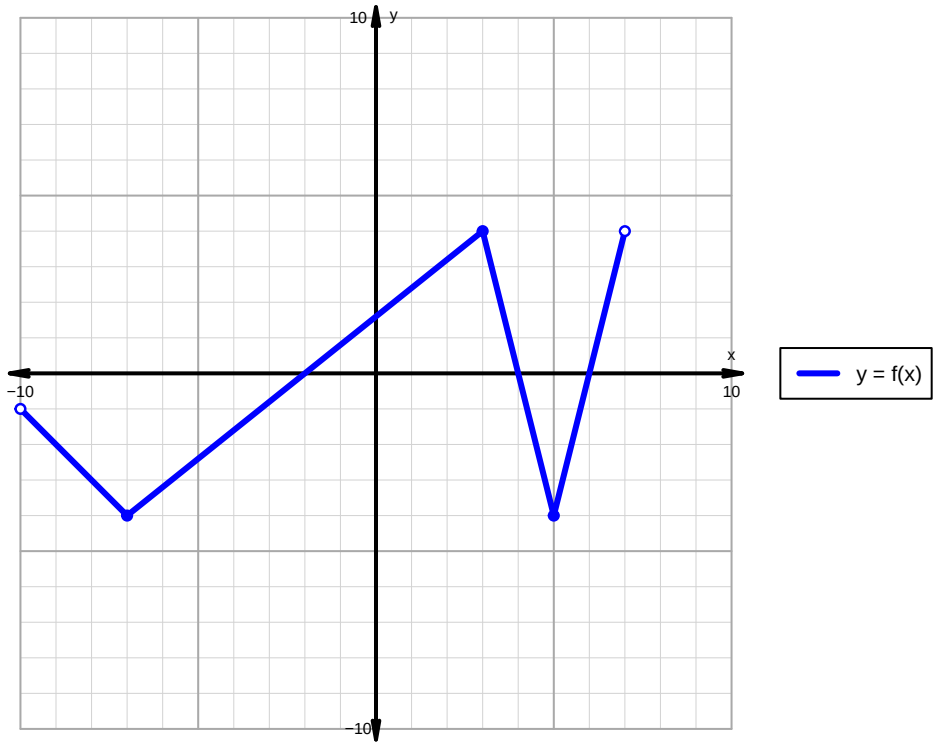




$y = 2 \cdot x^3$

Question 3 (20 points)

A function is graphed below.



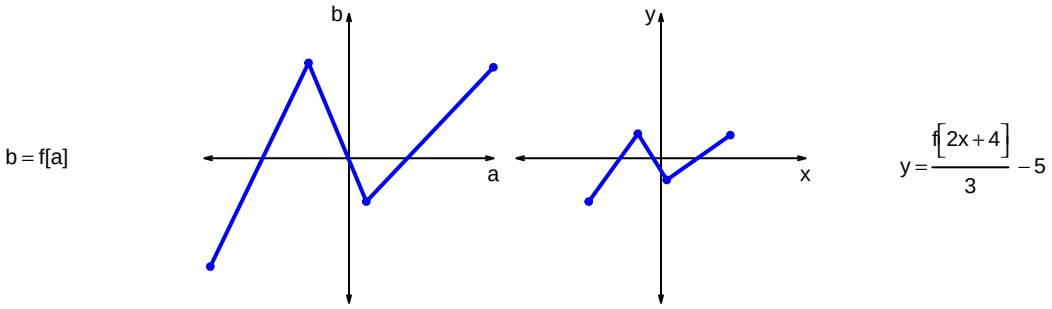
Indicate the following intervals using interval notation.

Feature	Where
Positive	
Negative	
Increasing	
Decreasing	
Domain	
Range	

Question 4 (20 points)

Let f represent a function. The curves $b = f[a]$ and $y = \frac{f[2x+4]}{3} - 5$ are represented below in a table and on graphs.

a	b	x	y
-96	-75	-50	-30
-28	66	-16	17
12	-30	4	-15
100	63	48	16



a. Write formulas for calculating x from a and calculating y from b. (Or, write the coordinate transformation formula.)

b. What geometric transformations (using words like translation, stretch, and shrink), and in what order, would transform the first curve $y = f[x]$ into the second curve $y = \frac{f[2x+4]}{3} - 5$?

Question 5 (10 points)

A parent square-root function is transformed in the following ways:

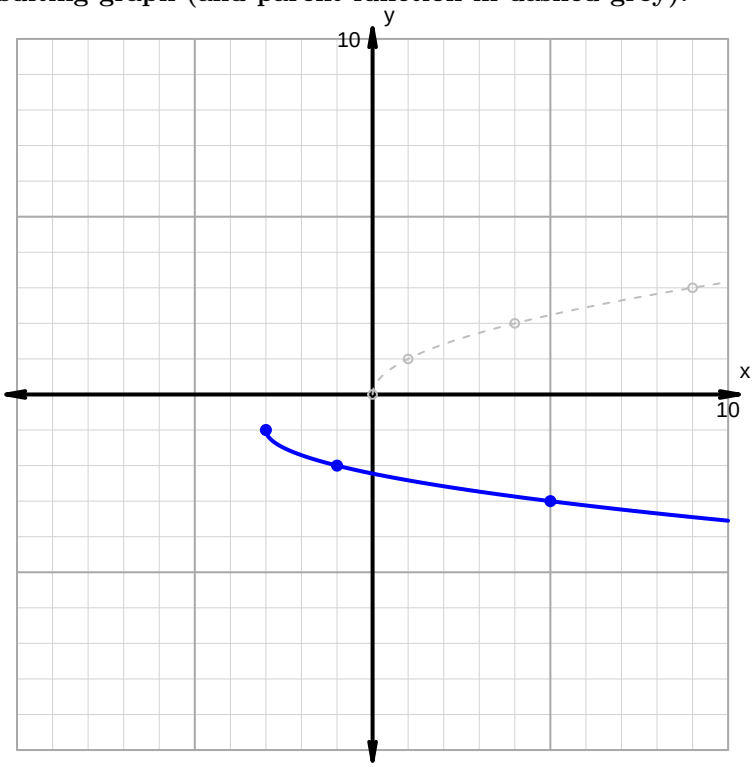
Horizontal transformations

1. Horizontal stretch by factor 2.
2. Translate left by distance 3.

Vertical transformations

1. Vertical reflection over x axis.
2. Translate down by distance 1.

Resulting graph (and parent function in dashed grey):

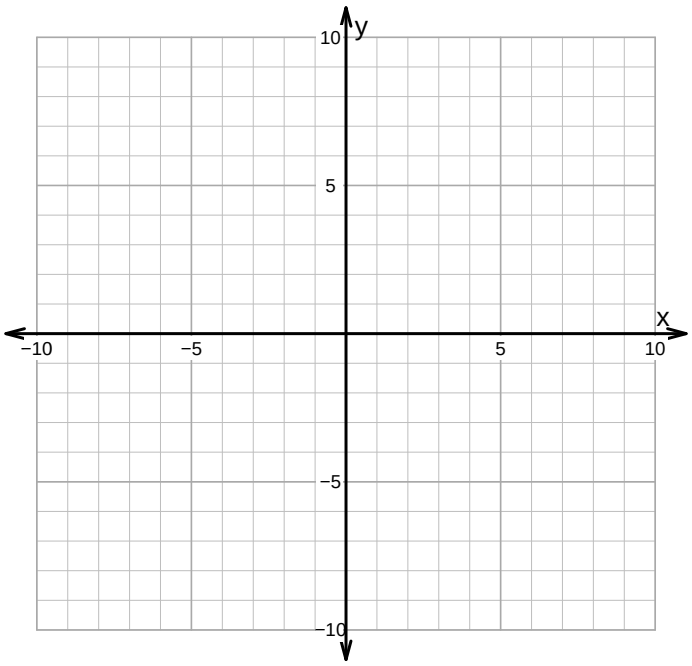


- What is the equation for the curve shown above?

Question 6 (20 points)

Make an accurate graph, and describe locations of features.

$$y \;=\; -3 \cdot |x + 2| + 3$$



Feature	Where
Domain	
Range	
Positive	
Negative	
Increasing	
Decreasing
