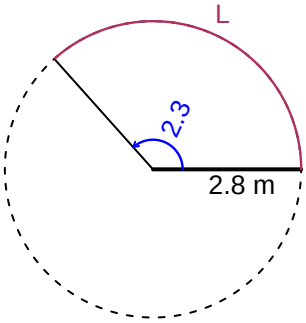
Trig Final (TEST v654)

- You can use a calculator (like Desmos)
- You should have a unit-circle with special angles and coordinates marked.

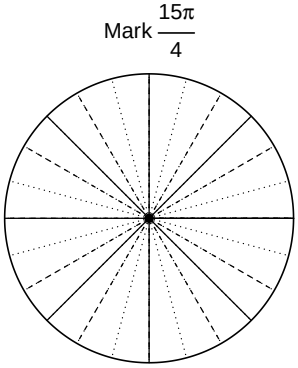
Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The angle measure is 2.3 radians. The radius is 2.8 meters. How long is the arc in meters?

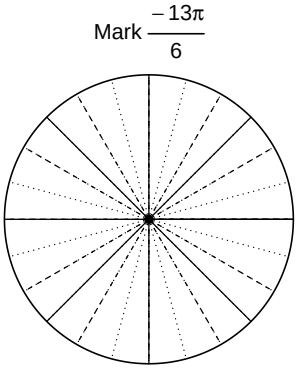


Question 2

Consider angles $\frac{15\pi}{4}$ and $\frac{-13\pi}{6}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(\frac{15\pi}{4}\right)$ and $\sin\left(\frac{-13\pi}{6}\right)$ by using a unit circle (provided separately).



Find $\cos(15\pi/4)$



Find $\sin(-13\pi/6)$

Question 3

If $\tan(\theta) = \frac{63}{16}$, and θ is in quadrant III, determine an exact value for $\cos(\theta)$.

Question 4

A mass-spring system oscillates vertically with a frequency of 6.85 Hz, an amplitude of 8.79 meters, and a midline at $y = 3.15$ meters. At $t = 0$, the mass is at the maximum height. Write an equation to model the height (y in meters) as a function of time (t in seconds).
