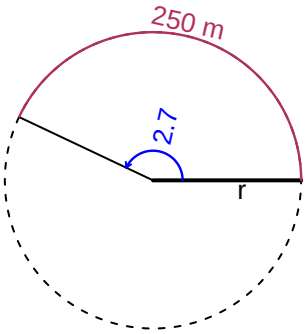
Trig Final (TEST v607)

- You can use a calculator (like Desmos)
- You should have a unit-circle with special angles and coordinates marked.

Question 1

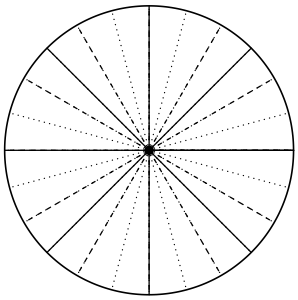
In the figure below, we see a circle and a central angle that subtends an arc. The angle measure is 2.7 radians. The arc length is 250 meters. How long is the radius in meters?



Question 2

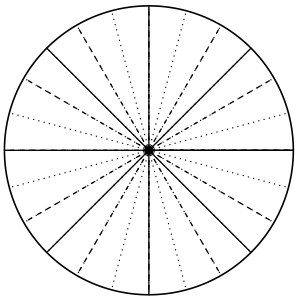
Consider angles $\frac{9\pi}{4}$ and $\frac{-17\pi}{6}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(\frac{9\pi}{4}\right)$ and $\sin\left(\frac{-17\pi}{6}\right)$ by using a unit circle (provided separately).

Mark $\frac{9\pi}{4}$



Find $\cos(9\pi/4)$

Mark $\frac{-17\pi}{6}$



Find $\sin(-17\pi/6)$

Question 3

If $\sin(\theta) = \frac{21}{29}$, and θ is in quadrant II, determine an exact value for $\tan(\theta)$.

Question 4

A mass-spring system oscillates vertically with a frequency of 6.76 Hz, an amplitude of 8.68 meters, and a midline at $y = -5.71$ meters. At $t = 0$, the mass is at the maximum height. Write an equation to model the height (y in meters) as a function of time (t in seconds).
