Name:

at1117paper: Complete the Square (v321)

Example

A square's edge length is x feet. A rectangle has a height of x feet and a width of 58 feet. Their combined area, found by adding the square's area and the rectangle's area, is 2075 square feet. What is the value of x?

Example's Solution

$$x^2 + 58x = 2075$$

To complete the square, add $\left(\frac{58}{2}\right)^2 = 841$ to both sides.

$$x^2 + 58x + 841 = 2916$$

Recognize the left side is now a perfect-square trinomial. Factor the left side.

$$(x + 29)^2 = 2916$$

Undo the squaring.

$$x + 29 = \pm\sqrt{2916}$$

$$x + 29 = \pm 54$$

Subtract 29 from both sides.

$$x = -29 \pm 54$$

In this geometric example, we are only concerned about the positive solution. So,

$$x = 25$$

Question 1

A square's edge length is x feet. A rectangle has a height of x feet and a width of 58 feet. The total area, of the square and rectangle, is 1368 square feet. What is the value of x?

Question 2

A square's edge length is x feet. A rectangle has a height of x feet and a width of 44 feet. The total area, of the square and rectangle, is 1365 square feet. What is the value of x?

Question 3

A square's edge length is x feet. A rectangle has a height of x feet and a width of 40 feet. The total area, of the square and rectangle, is 441 square feet. What is the value of x?
