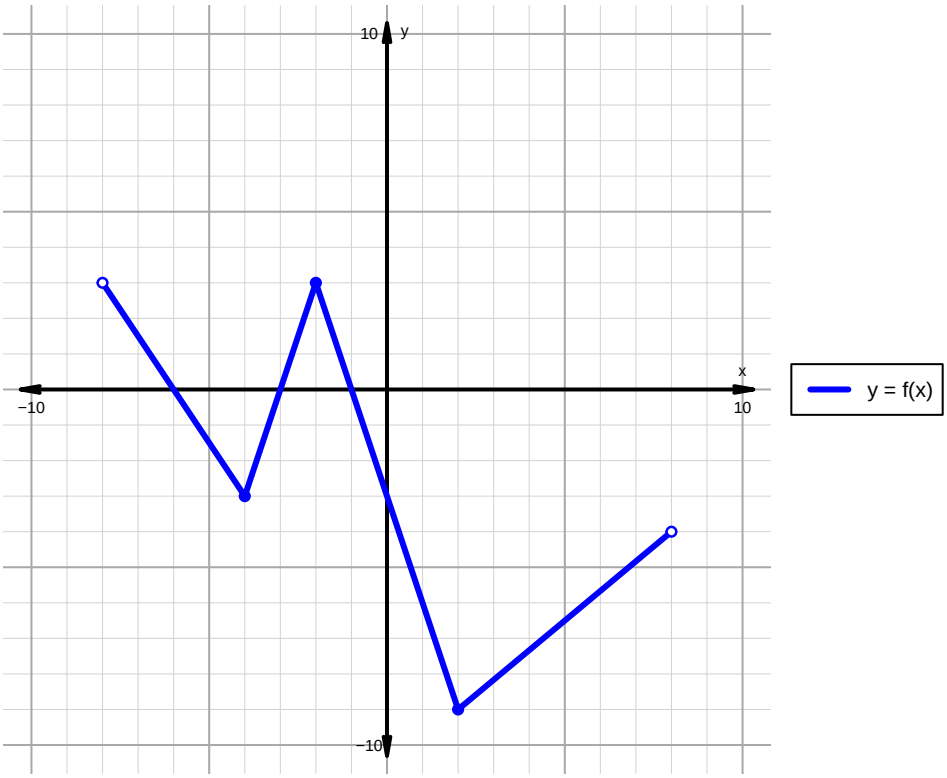
Intervals, Transformations, and Slope Solution (version 111)

1. The function f is graphed below.

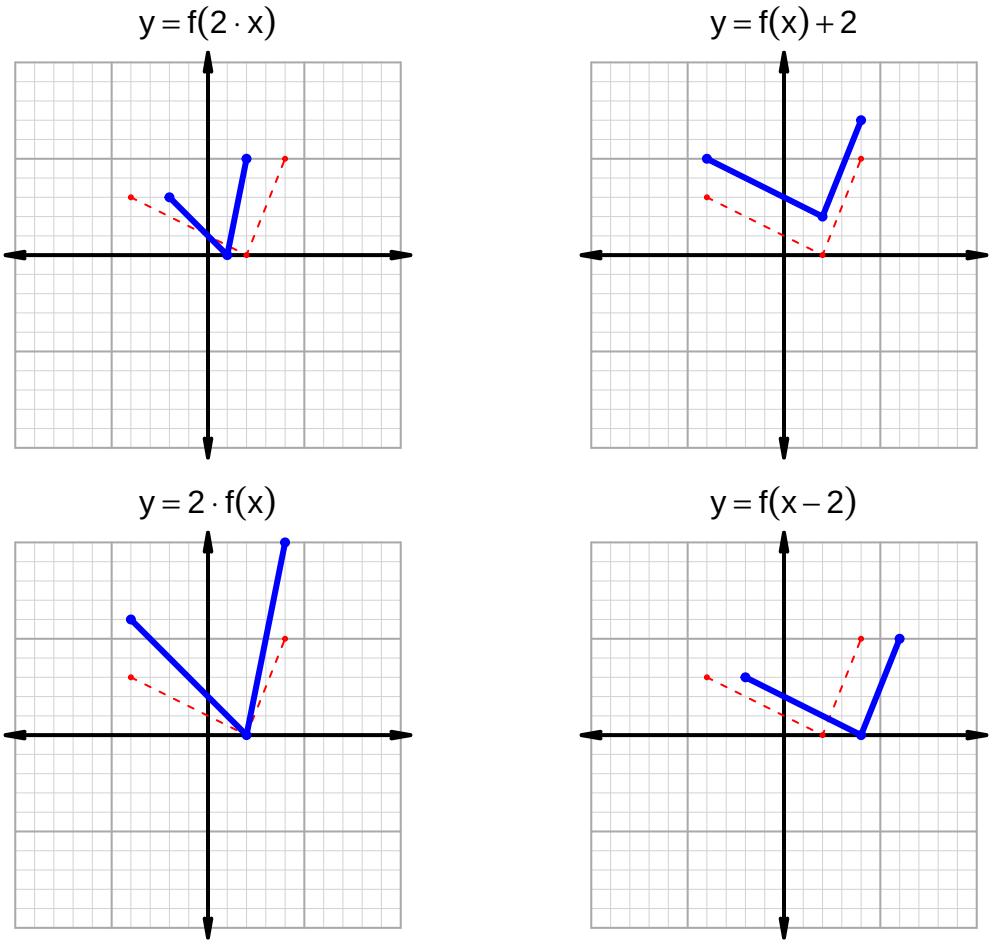


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(-8,-6) \cup (-3,-1)$
Negative	$(-6,-3) \cup (-1,8)$
Increasing	$(-4,-2) \cup (2,8)$
Decreasing	$(-8,-4) \cup (-2,2)$
Domain	$(-8,8)$
Range	$(-9,3)$

Intervals, Transformations, and Slope Solution (version 111)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 70$ and $x_2 = 78$. Express your answer as a reduced fraction.

x	$g(x)$
60	70
64	78
70	64
78	60

$\frac{f(78)-f(70)}{78-70} = \frac{60-64}{78-70} = \frac{-4}{8}$

The greatest common factor of -4 and 8 is 4. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{-1}{2}$$
