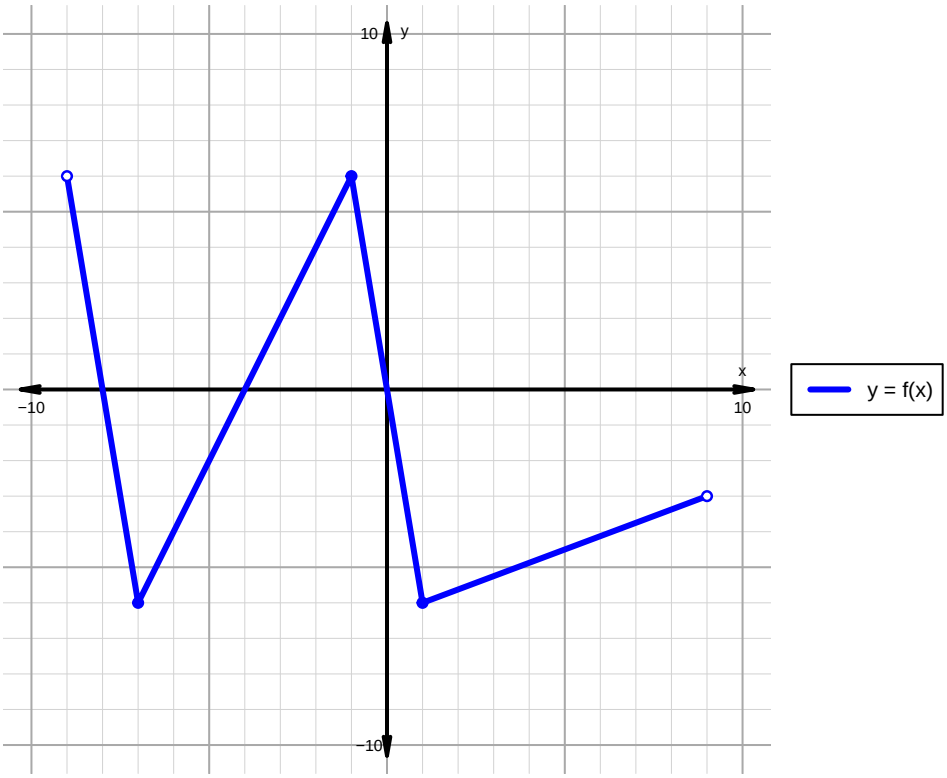
Intervals, Transformations, and Slope Solution (version 95)

1. The function f is graphed below.

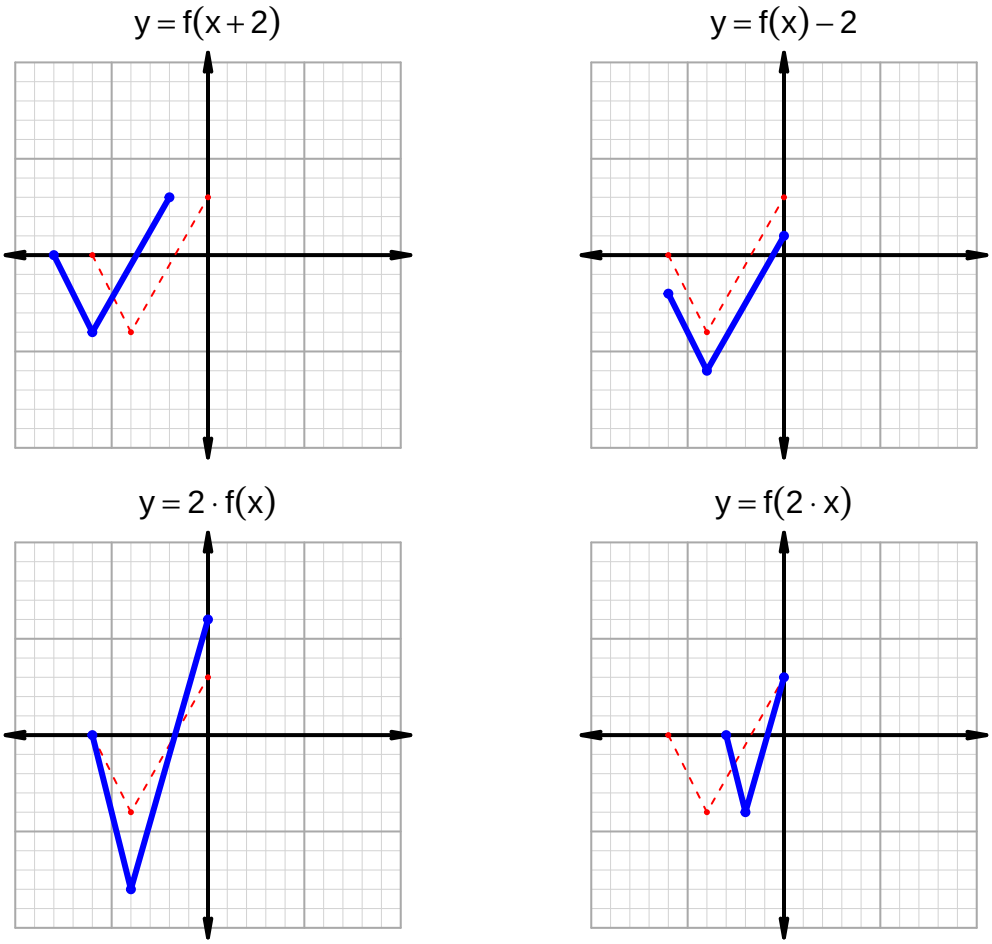


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(-9,-8)\cup(-4,0)$
Negative	$(-8,-4)\cup(0,9)$
Increasing	$(-7,-1)\cup(1,9)$
Decreasing	$(-9,-7)\cup(-1,1)$
Domain	$(-9,9)$
Range	$(-6,6)$

Intervals, Transformations, and Slope Solution (version 95)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 35$ and $x_2 = 80$. Express your answer as a reduced fraction.

x	$g(x)$
35	66
39	35
66	80
80	39

$\frac{g(80)-g(35)}{80-35} = \frac{39-66}{80-35} = \frac{-27}{45}$

The greatest common factor of -27 and 45 is 9. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{-3}{5}$$
