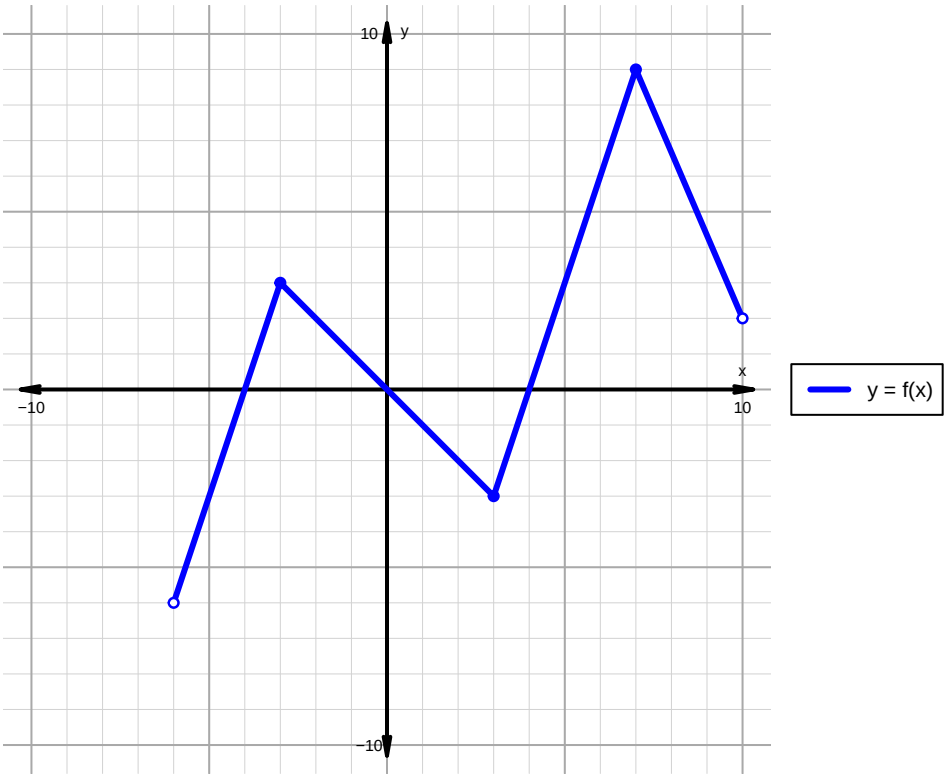
Intervals, Transformations, and Slope Solution (version 117)

1. The function f is graphed below.

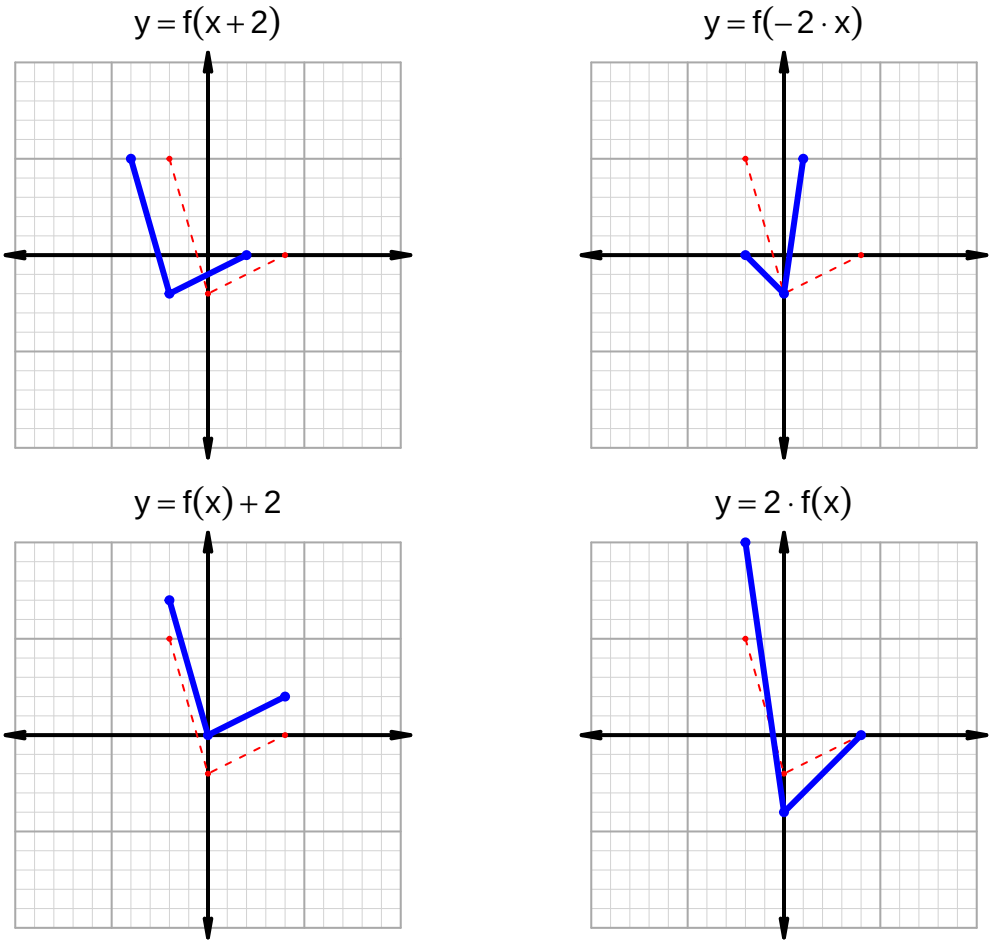


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(-4, 0) \cup (4, 10)$
Negative	$(-6, -4) \cup (0, 4)$
Increasing	$(-6, -3) \cup (3, 7)$
Decreasing	$(-3, 3) \cup (7, 10)$
Domain	$(-6, 10)$
Range	$(-6, 9)$

Intervals, Transformations, and Slope Solution (version 117)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 79$ and $x_2 = 87$. Express your answer as a reduced fraction.

x	$g(x)$
19	87
37	79
79	19
87	37

$\frac{f(87)-f(79)}{87-79} = \frac{37-19}{87-79} = \frac{18}{8}$

The greatest common factor of 18 and 8 is 2. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{9}{4}$$
