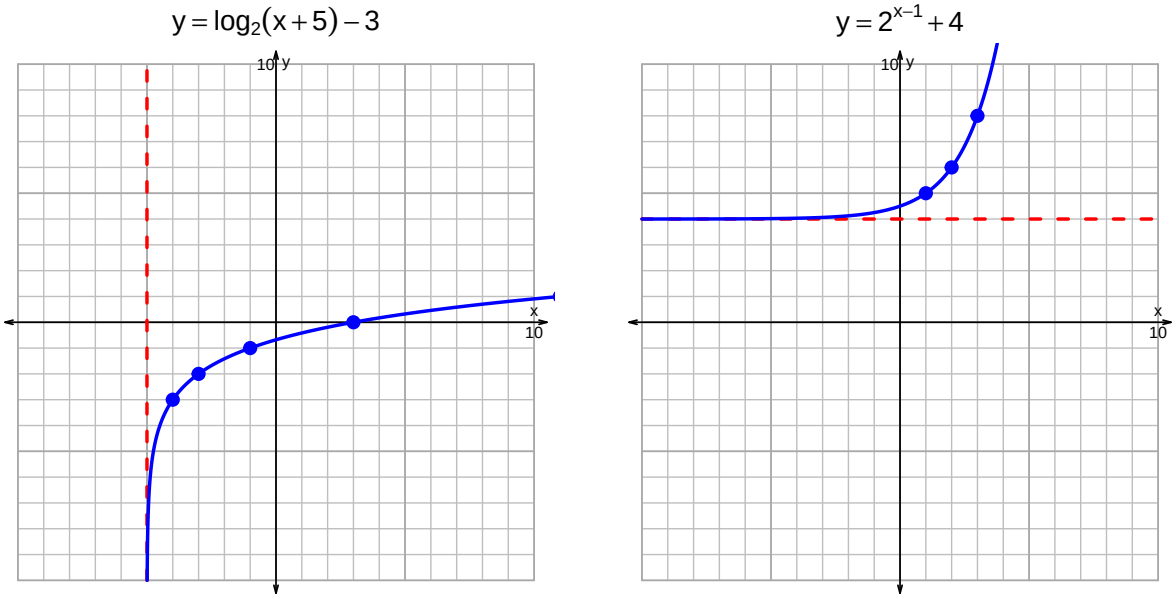
s18: EXP LOG (SLTN v341)

1. (10 pts) Graph $y = \log_2(x+5) - 3$ and $y = 2^{x-1} + 4$ on the grids below. Also, draw any asymptotes with dashed lines.



Somewhat useful hint: $2^3 = 8$, *and thus* $\log_2(8) = 3$.

2. (10 pts) Write (but do not evaluate) the solution to the equation below by writing a logarithmic expression. Please do not do any arithmetic; just move numbers around.

$$23 = \left(\frac{5}{7}\right) \cdot 10^{-3t/4}$$

Divide both sides by $\frac{5}{7}$.

$$\frac{23 \cdot 7}{5} = 10^{-3t/4}$$

Take log, base 10, of both sides.

$$\log_{10}\left(\frac{23 \cdot 7}{5}\right) = \frac{-3t}{4}$$

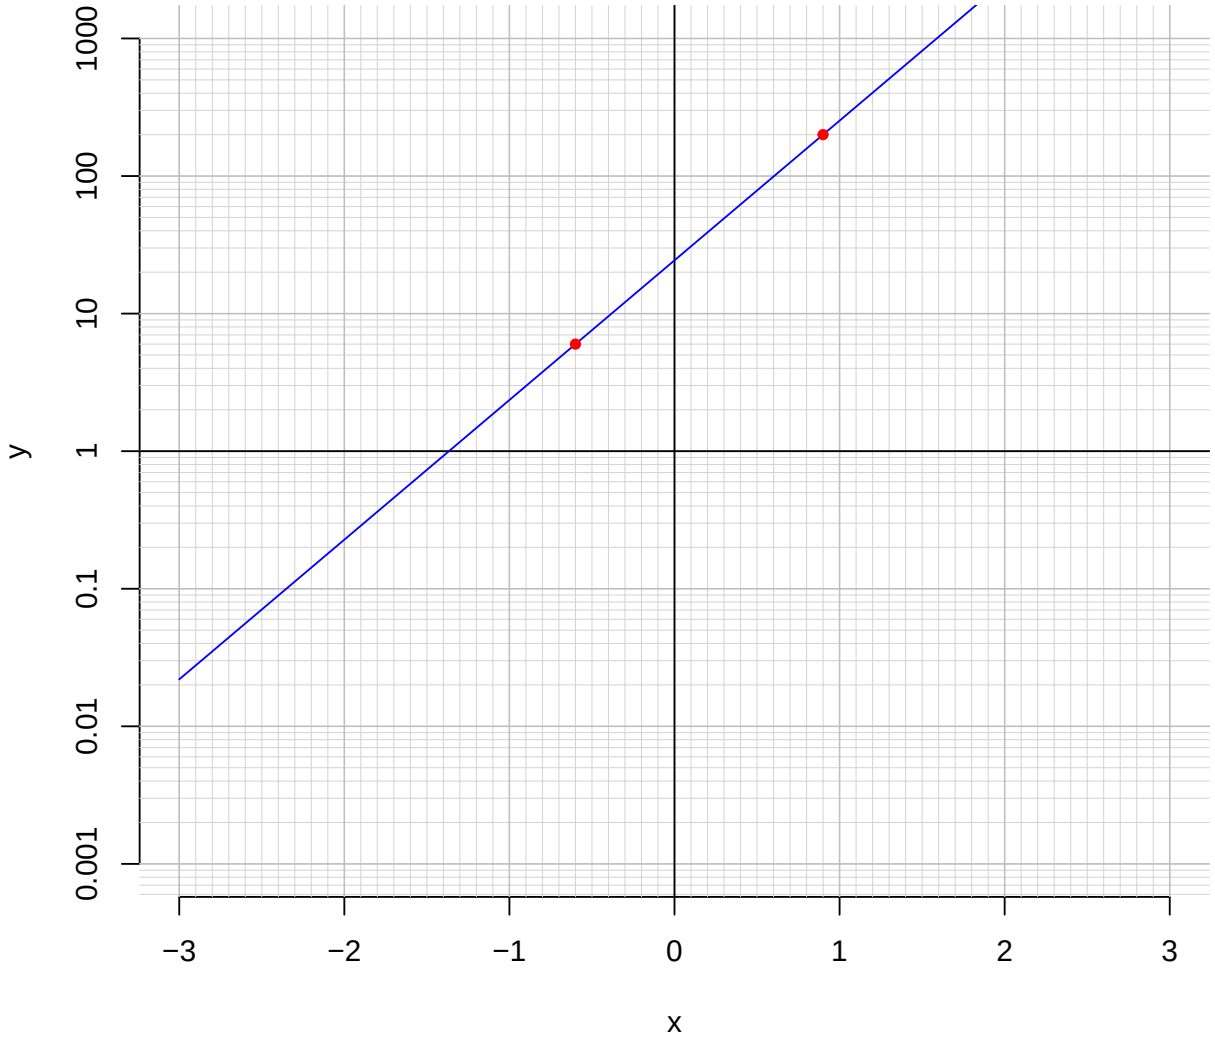
Divide both sides by $\frac{-3}{4}$.

$$\frac{-4}{3} \cdot \log_{10}\left(\frac{23 \cdot 7}{5}\right) = t$$

Switch sides.

$$t = \frac{-4}{3} \cdot \log_{10}\left(\frac{23 \cdot 7}{5}\right)$$

3. (10 pts) An exponential function $f(x) = 24.4 \cdot e^{2.34x}$ is graphed below on a semi-log plot.



a. Using the plot above, evaluate $f(-0.6)$.

$$f(-0.6) = 6$$

b. The inverse function is logarithmic.

$$f^{-1}(x) = \frac{1}{2.34} \cdot \ln\left(\frac{x}{24.4}\right)$$

Using the plot above, evaluate $f^{-1}(200)$.

$$f^{-1}(200) = 0.9$$
