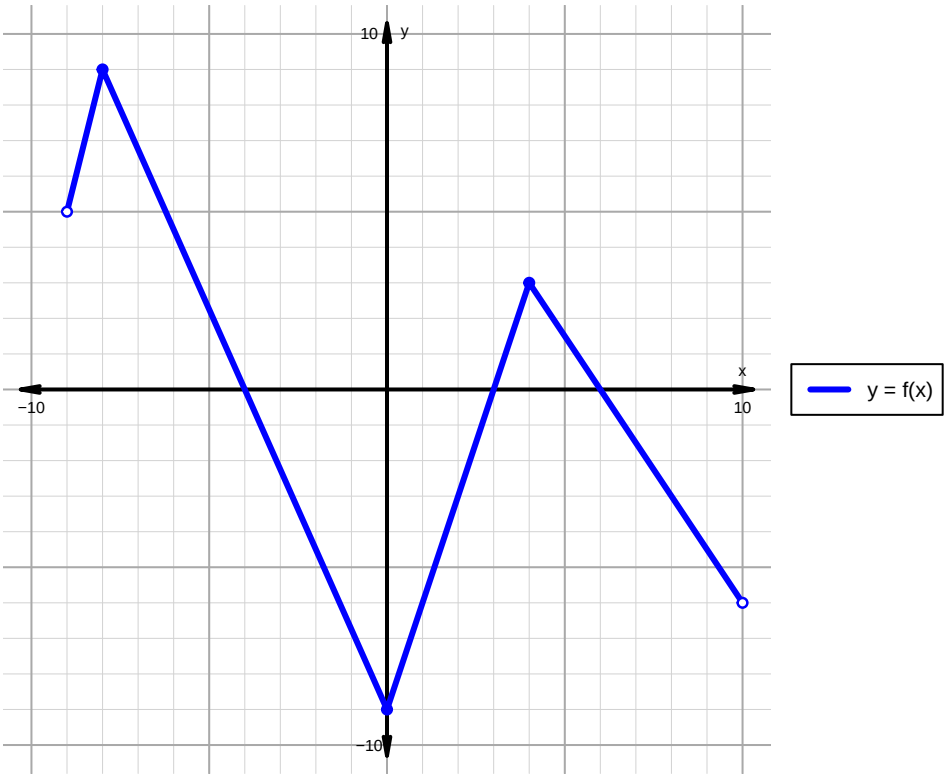
Intervals, Transformations, and Slope Solution (version 159)

1. The function f is graphed below.

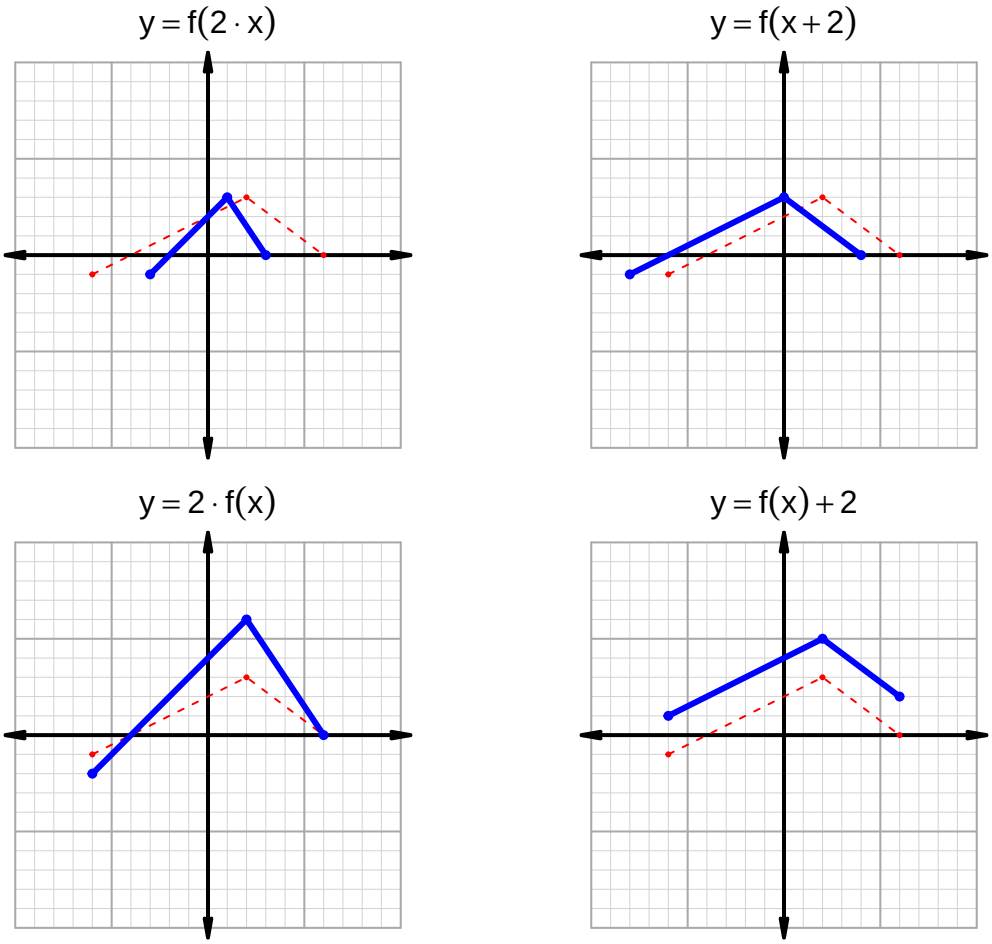


Indicate the following intervals using interval notation. Remember, you can use $\cup$ between two intervals to indicate the union. Except for range, all intervals will indicate x values; this is standard.

Feature	Where
Positive	$(-9,-4)\cup(3,6)$
Negative	$(-4,3)\cup(6,10)$
Increasing	$(-9,-8)\cup(0,4)$
Decreasing	$(-8,0)\cup(4,10)$
Domain	$(-9,10)$
Range	$(-9,9)$

Intervals, Transformations, and Slope Solution (version 159)

2. In the four graphs below, $y = f(x)$ is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.



3. Let function g be defined by the table below. Use the formula $\frac{g(x_2)-g(x_1)}{x_2-x_1}$ to find the average rate of change between $x_1 = 28$ and $x_2 = 73$. Express your answer as a reduced fraction.

x	$g(x)$
18	73
28	18
73	81
81	28

$\frac{g(73)-g(28)}{73-28} = \frac{81-18}{73-28} = \frac{63}{45}$

The greatest common factor of 63 and 45 is 9. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{7}{5}$$
