## Trig Final (TEST v687)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

### Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 13 meters. The angle measure is 1.3 radians. How long is the arc in meters?

### Question 2

Consider angles  $\frac{17\pi}{6}$  and  $\frac{-11\pi}{4}$ . For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for  $\cos\left(\frac{17\pi}{6}\right)$  and  $\sin\left(\frac{-11\pi}{4}\right)$  by using a unit circle (provided separately).

Find  $\cos(17\pi/6)$

Find  $\sin(-11\pi/4)$

**Question 3**

If  $\cos(\theta) = \frac{-39}{89}$ , and  $\theta$  is in quadrant III, determine an exact value for  $\sin(\theta)$ .

**Question 4**

A mass-spring system oscillates vertically with an amplitude of 4.59 meters, a midline at  $y = 6.15$  meters, and a frequency of 3.56 Hz. At  $t = 0$ , the mass is at the midline and moving down. Write an equation to model the height ( $y$  in meters) as a function of time ( $t$  in seconds).
