## Trig Final (Practice v16)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

### Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 5.1 meters. The arc length is 25 meters. What is the angle measure in radians?

### Question 2

Consider angles  $-\frac{10\pi}{3}$  and  $\frac{11\pi}{4}$ . For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for  $\cos\left(-\frac{10\pi}{3}\right)$  and  $\sin\left(\frac{11\pi}{4}\right)$  by using a unit circle (provided separately).

Find  $\cos(-10\pi/3)$

Find  $\sin(11\pi/4)$

**Question 3**

If  $\tan(\theta) = \frac{-77}{36}$ , and  $\theta$  is in quadrant IV, determine an exact value for  $\cos(\theta)$ .

**Question 4**

A mass-spring system oscillates vertically with an amplitude of 6.94 meters, a frequency of 2.32 Hz, and a midline at  $y = 4.9$  meters. At  $t = 0$ , the mass is at the maximum height. Write an equation to model the height ( $y$  in meters) as a function of time ( $t$  in seconds).
