

Name: _____

Date: _____

Trig Final (TEST v619)

- You can use a calculator (like [Desmos](#))
- You should have a unit-circle with special angles and coordinates marked.

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The angle measure is 4.4 radians. The radius is 94 meters. How long is the arc in meters?

Question 2

Consider angles $\frac{8\pi}{3}$ and $-\frac{11\pi}{4}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\sin\left(\frac{8\pi}{3}\right)$ and $\cos\left(-\frac{11\pi}{4}\right)$ by using a unit circle (provided separately).

Find $\sin(8\pi/3)$

Find $\cos(-11\pi/4)$

Question 3

If $\tan(\theta) = \frac{24}{7}$, and θ is in quadrant III, determine an exact value for $\cos(\theta)$.

Question 4

A mass-spring system oscillates vertically with an amplitude of 8.9 meters, a midline at $y = 7.84$ meters, and a frequency of 2.3 Hz. At $t = 0$, the mass is at the minimum height. Write an equation to model the height (y in meters) as a function of time (t in seconds).
