## Trig Final (TEST v656)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

### Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 39 meters. The angle measure is 3.3 radians. How long is the arc in meters?

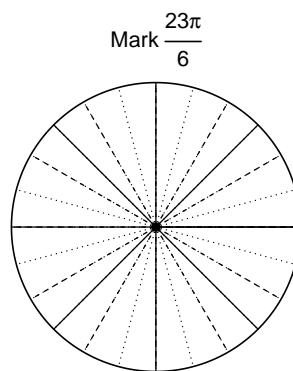

### Question 2

Consider angles  $-\frac{11\pi}{4}$  and  $\frac{23\pi}{6}$ . For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for  $\sin\left(-\frac{11\pi}{4}\right)$  and  $\cos\left(\frac{23\pi}{6}\right)$  by using a unit circle (provided separately).

Find  $\sin(-11\pi/4)$

Find  $\cos(23\pi/6)$

**Question 3**

If  $\tan(\theta) = \frac{80}{39}$ , and  $\theta$  is in quadrant III, determine an exact value for  $\cos(\theta)$ .

**Question 4**

A mass-spring system oscillates vertically with a frequency of 6.32 Hz, an amplitude of 4.32 meters, and a midline at  $y = 2.35$  meters. At  $t = 0$ , the mass is at the midline and moving up. Write an equation to model the height ( $y$  in meters) as a function of time ( $t$  in seconds).
