**Intervals, Transformations, and Slope Solution (version 176)**1. The function  $f$  is graphed below.

Indicate the following intervals using interval notation. Remember, you can use  $\cup$  between two intervals to indicate the union. Except for range, all intervals will indicate  $x$  values; this is standard.

Feature	Where
Positive	$(-4, -1) \cup (4, 6)$
Negative	$(-6, -4) \cup (-1, 4)$
Increasing	$(-6, -2) \cup (3, 5)$
Decreasing	$(-2, 3) \cup (5, 6)$
Domain	$(-6, 6)$
Range	$(-8, 8)$

## Intervals, Transformations, and Slope Solution (version 176)

2. In the four graphs below,  $y = f(x)$  is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.

3. Let function  $g$  be defined by the table below. Use the formula  $\frac{g(x_2) - g(x_1)}{x_2 - x_1}$  to find the average rate of change between  $x_1 = 44$  and  $x_2 = 69$ . Express your answer as a reduced fraction.

$x$	$g(x)$
44	68
68	69
69	88
88	44

$$\frac{g(69) - g(44)}{69 - 44} = \frac{88 - 68}{69 - 44} = \frac{20}{25}$$

The greatest common factor of 20 and 25 is 5. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{4}{5}$$
