

Name: _____

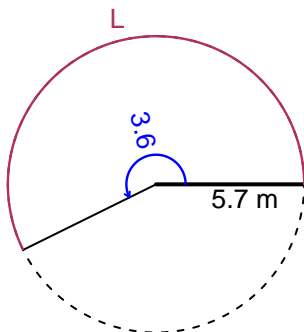

Date: _____

Trig Final (TEST v673)

- You can use a calculator (like [Desmos](#))
- You should have a unit-circle with special angles and coordinates marked.

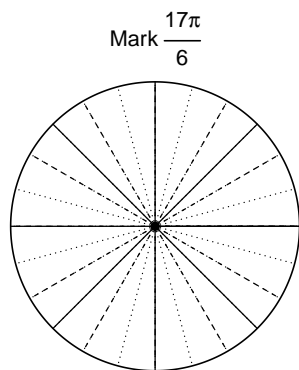

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 5.7 meters. The angle measure is 3.6 radians. How long is the arc in meters?

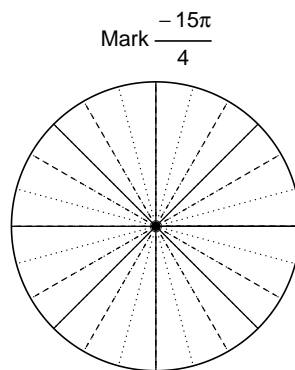

Question 2

Consider angles $\frac{17\pi}{6}$ and $-\frac{15\pi}{4}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(\frac{17\pi}{6}\right)$ and $\sin\left(-\frac{15\pi}{4}\right)$ by using a unit circle (provided separately).

Find $\cos(17\pi/6)$

Find $\sin(-15\pi/4)$

Question 3

If $\cos(\theta) = \frac{-8}{17}$, and θ is in quadrant III, determine an exact value for $\tan(\theta)$.

Question 4

A mass-spring system oscillates vertically with a frequency of 4.79 Hz, an amplitude of 8 meters, and a midline at $y = -6.61$ meters. At $t = 0$, the mass is at the midline and moving up. Write an equation to model the height (y in meters) as a function of time (t in seconds).
