

Name: _____

Date: _____

Trig Final (Practice v6)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

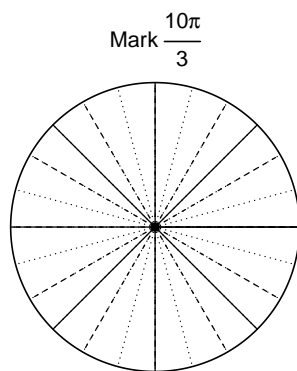

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The angle measure is 5.2 radians. The radius is 25 meters. How long is the arc in meters?

Question 2

Consider angles $\frac{10\pi}{3}$ and $\frac{-9\pi}{4}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(\frac{10\pi}{3}\right)$ and $\sin\left(\frac{-9\pi}{4}\right)$ by using a unit circle (provided separately).

Find $\cos(10\pi/3)$

Find $\sin(-9\pi/4)$

Question 3

If $\tan(\theta) = \frac{-55}{48}$, and θ is in quadrant IV, determine an exact value for $\sin(\theta)$.

Question 4

A mass-spring system oscillates vertically with a frequency of 6.9 Hz, an amplitude of 3.03 meters, and a midline at $y = -8.71$ meters. At $t = 0$, the mass is at the minimum height. Write an equation to model the height (y in meters) as a function of time (t in seconds).
