## Trig Final (TEST v628)

- You can use a calculator (like [Desmos](#))
- You should have a unit-circle with special angles and coordinates marked.

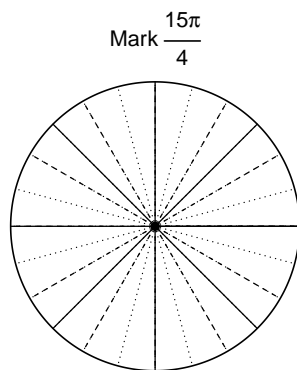

### Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 25 meters. The angle measure is 3.7 radians. How long is the arc in meters?

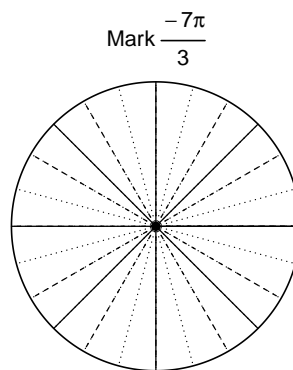

### Question 2

Consider angles  $\frac{15\pi}{4}$  and  $-\frac{7\pi}{3}$ . For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for  $\sin\left(\frac{15\pi}{4}\right)$  and  $\cos\left(-\frac{7\pi}{3}\right)$  by using a unit circle (provided separately).

Find  $\sin(15\pi/4)$

Find  $\cos(-7\pi/3)$

**Question 3**

If  $\tan(\theta) = \frac{-12}{5}$ , and  $\theta$  is in quadrant IV, determine an exact value for  $\cos(\theta)$ .

**Question 4**

A mass-spring system oscillates vertically with a frequency of 2.71 Hz, a midline at  $y = 5.76$  meters, and an amplitude of 7.07 meters. At  $t = 0$ , the mass is at the midline and moving down. Write an equation to model the height ( $y$  in meters) as a function of time ( $t$  in seconds).
