

Name: _____

Date: _____

Trig Final (TEST v685)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 16 meters. The angle measure is 1.7 radians. How long is the arc in meters?

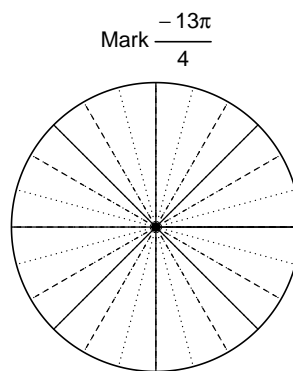

Question 2

Consider angles $\frac{19\pi}{6}$ and $-\frac{13\pi}{4}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(\frac{19\pi}{6}\right)$ and $\sin\left(-\frac{13\pi}{4}\right)$ by using a unit circle (provided separately).

Find $\cos(19\pi/6)$

Find $\sin(-13\pi/4)$

Question 3

If $\tan(\theta) = \frac{24}{7}$, and θ is in quadrant III, determine an exact value for $\cos(\theta)$.

Question 4

A mass-spring system oscillates vertically with a frequency of 2.32 Hz, an amplitude of 6.58 meters, and a midline at $y = 3.66$ meters. At $t = 0$, the mass is at the minimum height. Write an equation to model the height (y in meters) as a function of time (t in seconds).
