## Trig Final (Practice v46)

- You can use a calculator (like [Desmos](#))
- You should have a unit-circle with special angles and coordinates marked.

### Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The angle measure is 0.93 radians. The arc length is 33 meters. How long is the radius in meters?

### Question 2

Consider angles  $-\frac{9\pi}{4}$  and  $\frac{13\pi}{6}$ . For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for  $\cos\left(-\frac{9\pi}{4}\right)$  and  $\sin\left(\frac{13\pi}{6}\right)$  by using a unit circle (provided separately).

Find  $\cos(-9\pi/4)$

Find  $\sin(13\pi/6)$

**Question 3**

If  $\sin(\theta) = \frac{24}{25}$ , and  $\theta$  is in quadrant II, determine an exact value for  $\tan(\theta)$ .

**Question 4**

A mass-spring system oscillates vertically with a frequency of 7.25 Hz, a midline at  $y = -3.54$  meters, and an amplitude of 5.58 meters. At  $t = 0$ , the mass is at the maximum height. Write an equation to model the height ( $y$  in meters) as a function of time ( $t$  in seconds).
