## Trig Final (TEST v626)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

### Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The arc length is 12 meters. The angle measure is 1 radians. How long is the radius in meters?

### Question 2

Consider angles  $\frac{9\pi}{4}$  and  $-\frac{7\pi}{3}$ . For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for  $\cos\left(\frac{9\pi}{4}\right)$  and  $\sin\left(-\frac{7\pi}{3}\right)$  by using a unit circle (provided separately).

Find  $\cos(9\pi/4)$

Find  $\sin(-7\pi/3)$

**Question 3**

If  $\cos(\theta) = \frac{-12}{37}$ , and  $\theta$  is in quadrant III, determine an exact value for  $\tan(\theta)$ .

**Question 4**

A mass-spring system oscillates vertically with a midline at  $y = 2.68$  meters, a frequency of 6.85 Hz, and an amplitude of 5.05 meters. At  $t = 0$ , the mass is at the maximum height. Write an equation to model the height ( $y$  in meters) as a function of time ( $t$  in seconds).
