## Trig Final (Practice v14)

- You can use a calculator (like [Desmos](#))
- You should have a unit-circle with special angles and coordinates marked.

### Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The angle measure is 3.3 radians. The radius is 40 meters. How long is the arc in meters?

### Question 2

Consider angles  $\frac{9\pi}{4}$  and  $-\frac{10\pi}{3}$ . For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for  $\sin\left(\frac{9\pi}{4}\right)$  and  $\cos\left(-\frac{10\pi}{3}\right)$  by using a unit circle (provided separately).

Find  $\sin(9\pi/4)$

Find  $\cos(-10\pi/3)$

**Question 3**

If  $\cos(\theta) = \frac{36}{85}$ , and  $\theta$  is in quadrant IV, determine an exact value for  $\tan(\theta)$ .

**Question 4**

A mass-spring system oscillates vertically with an amplitude of 7.5 meters, a frequency of 5.83 Hz, and a midline at  $y = 3.67$  meters. At  $t = 0$ , the mass is at the maximum height. Write an equation to model the height ( $y$  in meters) as a function of time ( $t$  in seconds).
