Date: _____

Trig Final (Practice v45)

- You can use a calculator (like [Desmos](#))
- You should have a unit-circle with special angles and coordinates marked.

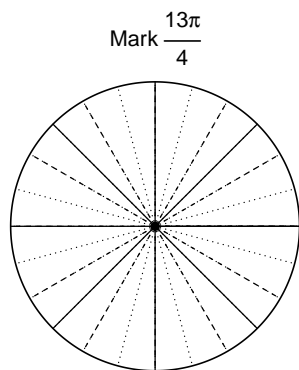

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 24 meters. The arc length is 42 meters. What is the angle measure in radians?

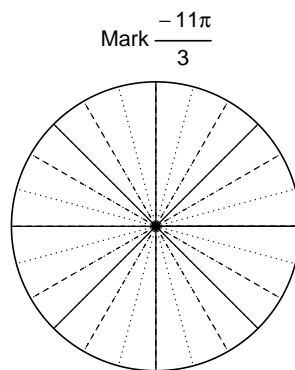

Question 2

Consider angles $\frac{13\pi}{4}$ and $\frac{-11\pi}{3}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\sin\left(\frac{13\pi}{4}\right)$ and $\cos\left(\frac{-11\pi}{3}\right)$ by using a unit circle (provided separately).

Find $\sin(13\pi/4)$

Find $\cos(-11\pi/3)$

Question 3

If $\tan(\theta) = \frac{-77}{36}$, and θ is in quadrant II, determine an exact value for $\cos(\theta)$.

Question 4

A mass-spring system oscillates vertically with a midline at $y = -8.14$ meters, a frequency of 4.84 Hz, and an amplitude of 2.1 meters. At $t = 0$, the mass is at the midline and moving up. Write an equation to model the height (y in meters) as a function of time (t in seconds).
