## Trig Final (TEST v611)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

### Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The arc length is 37 meters. The angle measure is 1.1 radians. How long is the radius in meters?

### Question 2

Consider angles  $\frac{15\pi}{4}$  and  $\frac{-11\pi}{3}$ . For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for  $\sin\left(\frac{15\pi}{4}\right)$  and  $\cos\left(\frac{-11\pi}{3}\right)$  by using a unit circle (provided separately).

Find  $\sin(15\pi/4)$

Find  $\cos(-11\pi/3)$

**Question 3**

If  $\tan(\theta) = \frac{-45}{28}$ , and  $\theta$  is in quadrant II, determine an exact value for  $\sin(\theta)$ .

**Question 4**

A mass-spring system oscillates vertically with an amplitude of 2.96 meters, a frequency of 8.75 Hz, and a midline at  $y = 4.27$  meters. At  $t = 0$ , the mass is at the maximum height. Write an equation to model the height ( $y$  in meters) as a function of time ( $t$  in seconds).
