

Name: _____

Date: _____

Trig Final (TEST v648)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 2 meters. The arc length is 6.6 meters. What is the angle measure in radians?

Question 2

Consider angles $\frac{17\pi}{6}$ and $\frac{-15\pi}{4}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(\frac{17\pi}{6}\right)$ and $\sin\left(\frac{-15\pi}{4}\right)$ by using a unit circle (provided separately).

Find $\cos(17\pi/6)$

Find $\sin(-15\pi/4)$

Question 3

If $\cos(\theta) = \frac{9}{41}$, and θ is in quadrant IV, determine an exact value for $\sin(\theta)$.

Question 4

A mass-spring system oscillates vertically with a midline at $y = 5.94$ meters, a frequency of 2.2 Hz, and an amplitude of 7.44 meters. At $t = 0$, the mass is at the minimum height. Write an equation to model the height (y in meters) as a function of time (t in seconds).
