

Name: _____

Date: _____

Trig Final (TEST v626)

- You can use a calculator (like [Desmos](#))
- You should have a unit-circle with special angles and coordinates marked.

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 14 meters. The arc length is 54 meters. What is the angle measure in radians?

Question 2

Consider angles $\frac{9\pi}{4}$ and $-\frac{17\pi}{6}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(\frac{9\pi}{4}\right)$ and $\sin\left(-\frac{17\pi}{6}\right)$ by using a unit circle (provided separately).

Find $\cos(9\pi/4)$

Find $\sin(-17\pi/6)$

Question 3

If $\tan(\theta) = \frac{-80}{39}$, and θ is in quadrant II, determine an exact value for $\cos(\theta)$.

Question 4

A mass-spring system oscillates vertically with a midline at $y = 2.08$ meters, a frequency of 8.9 Hz, and an amplitude of 4.86 meters. At $t = 0$, the mass is at the midline and moving up. Write an equation to model the height (y in meters) as a function of time (t in seconds).
