**Intervals, Transformations, and Slope Solution (version 131)**1. The function  $f$  is graphed below.

Indicate the following intervals using interval notation. Remember, you can use  $\cup$  between two intervals to indicate the union. Except for range, all intervals will indicate  $x$  values; this is standard.

Feature	Where
Positive	$(-5, -1) \cup (3, 10)$
Negative	$(-10, -5) \cup (-1, 3)$
Increasing	$(-10, -2) \cup (0, 6)$
Decreasing	$(-2, 0) \cup (6, 10)$
Domain	$(-10, 10)$
Range	$(-10, 6)$

## Intervals, Transformations, and Slope Solution (version 131)

2. In the four graphs below,  $y = f(x)$  is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.

3. Let function  $g$  be defined by the table below. Use the formula  $\frac{g(x_2) - g(x_1)}{x_2 - x_1}$  to find the average rate of change between  $x_1 = 18$  and  $x_2 = 58$ . Express your answer as a reduced fraction.

$x$	$g(x)$
18	61
58	86
61	58
86	18

$$\frac{f(58) - f(18)}{58 - 18} = \frac{86 - 61}{58 - 18} = \frac{25}{40}$$

The greatest common factor of 25 and 40 is 5. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{5}{8}$$
