## Trig Final (Practice v40)

- You can use a calculator (like [Desmos](#))
- You should have a unit-circle with special angles and coordinates marked.

### Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 11 meters. The arc length is 19 meters. What is the angle measure in radians?

### Question 2

Consider angles  $-\frac{11\pi}{4}$  and  $\frac{11\pi}{3}$ . For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for  $\sin\left(-\frac{11\pi}{4}\right)$  and  $\cos\left(\frac{11\pi}{3}\right)$  by using a unit circle (provided separately).

Find  $\sin(-11\pi/4)$

Find  $\cos(11\pi/3)$

**Question 3**

If  $\cos(\theta) = \frac{-48}{73}$ , and  $\theta$  is in quadrant III, determine an exact value for  $\tan(\theta)$ .

**Question 4**

A mass-spring system oscillates vertically with an amplitude of 7.17 meters, a midline at  $y = 2.85$  meters, and a frequency of 4.83 Hz. At  $t = 0$ , the mass is at the midline and moving up. Write an equation to model the height ( $y$  in meters) as a function of time ( $t$  in seconds).
