## Trig Final (TEST v690)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

### Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 29 meters. The angle measure is 4.2 radians. How long is the arc in meters?

### Question 2

Consider angles  $-\frac{11\pi}{4}$  and  $\frac{11\pi}{3}$ . For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for  $\cos\left(-\frac{11\pi}{4}\right)$  and  $\sin\left(\frac{11\pi}{3}\right)$  by using a unit circle (provided separately).

Find  $\cos\left(-\frac{11\pi}{4}\right)$

Find  $\sin\left(\frac{11\pi}{3}\right)$

**Question 3**

If  $\cos(\theta) = \frac{-5}{13}$ , and  $\theta$  is in quadrant II, determine an exact value for  $\tan(\theta)$ .

**Question 4**

A mass-spring system oscillates vertically with a midline at  $y = 5.3$  meters, a frequency of 8.65 Hz, and an amplitude of 2.27 meters. At  $t = 0$ , the mass is at the midline and moving down. Write an equation to model the height ( $y$  in meters) as a function of time ( $t$  in seconds).
