

Name: _____

Date: _____

Trig Final (TEST v688)

- You can use a calculator (like [Desmos](#))
- You should have a unit-circle with special angles and coordinates marked.

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The arc length is 24 meters. The angle measure is 3.8 radians. How long is the radius in meters?

Question 2

Consider angles $-\frac{9\pi}{4}$ and $\frac{17\pi}{6}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\sin\left(-\frac{9\pi}{4}\right)$ and $\cos\left(\frac{17\pi}{6}\right)$ by using a unit circle (provided separately).

Find $\sin(-9\pi/4)$

Find $\cos(17\pi/6)$

Question 3

If $\sin(\theta) = \frac{-12}{13}$, and θ is in quadrant IV, determine an exact value for $\tan(\theta)$.

Question 4

A mass-spring system oscillates vertically with an amplitude of 3.02 meters, a midline at $y = 7.3$ meters, and a frequency of 8.87 Hz. At $t = 0$, the mass is at the minimum height. Write an equation to model the height (y in meters) as a function of time (t in seconds).
